Escaped from Germany

AN escaped prisoner tells the story of his fearful experiences in Germany in MACLEAN'S MAGAZINE for November; and gives a vivid picture of conditions in Germany as he saw them. He got out by way of Holland after appalling perils and hardships. In Holland, he was photographed, but so altered was he that his wife quite failed to recognize him in this photograph. Read this story of this Canadian soldier's escape. It is gripping stuff—a rare tale.

Canadian Finances After the War

WILL business in Canada collapse when peace comes? It may. What do the big men say? What do they know? What do you think? Are your opinions well informed? The subject is of the greatest possible importance, and you will get light and leading by reading the contribution of Col. John Bayne Maclean, who has taken the trouble to get the opinion of the biggest and most highly placed men in Canada to help him prepare his article.

Back from the Arctic

WILLIAM THOMPSON, representing the American Geographical Society, was this year in the Arctic Regions. He went to the delta of the Mackenzie River, and took many excellent pictures of the country and its Eskimo inhabitants. He makes the November MACLEAN'S the vehicle of many of his pictures and for an account of his journey. Read what this Arctic scientist has to tell us about a remote part of our land.

Slackers and Conscription

WHAT is your attitude towards the draft? You have positive opinions, of course. How do they square with Miss Laut's as they are expressed in her ringing article on Slackers in the November MACLEAN'S?

The Nation's Business

THIS is a new feature—a fearless, well-informed survey of national affairs. What we all want is an outspoken—but not vindictive—and clear-visioned presentation of factors and facts affecting our national, political and economic welfare.

Sketches of Trench Life

By Gunner McRitchie

MCRITCHIE was a cartoonist on a Western Canada daily before he went overseas. He has done a number of sketches of trench life "On the Spot," and these he has sent home, for publication in MACLEAN'S MAGAZINE. They're interesting and good.

The Late Sir Mortimer Clark

BEFORE he died, a few weeks ago, the late Sir Mortimer Clark, eminent jurist and an ex-Lieutenant-Governor of Ontario, wrote for MACLEAN'S an article on "Safeguarding Your Heirs." It has to do with the functions, service and safety of Trust Companies as executors of estates. This article by a man so distinguished, so cautious, so able, and so wise a counsellor, can be of first-rate value to every man perplexed with the problem of how his estate can be safely and prudently administered after he, the testator, has passed from this life.

A Complete Novelette

By Peter B. Kyne

HIS story in the November MACLEAN'S is a thunderingly good story of lumbermen and lumbering. Red blood is in this tale of business. R. M. Brinkerhoff illustrates it.

Short Story

By Ethel Watts Mumford

THE writer of this short story—the first of a delightful series by this author to appear in MACLEAN'S—is very well known among short story writers. Delicate fancy, wholesomeness, freshness and finished workmanship characterize all her work.

Short Story

By W. A. Fraser

A MIGHTILY well-written story of India—the kind that we all delight in; tense, bewildering, and lots of action. Fraser never wrote a better short story than this. Ben Ward illustrates it.

Hendryx and Oppenheim

SERIALISTS

"THE Gun Brand," by Hendryx, comes to an end in the November issue. Oppenheim's greatest story, "The Pawns Count," is continued. Oppenheim's story is the biggest single feature ever secured by MACLEAN'S.

PEERLESS ORNAMENTAL FENCING

A Big Trade Is Waiting for You.

YOUR business will jump to the front the minute you display Peerless Fencing. In price, quality, designs and actual worth you can guarantee every foot of it. We stand back of you.

Open hearth steel wire, crimped springy horizontal wires combine to make the Peerless fence outlast ordinary kinds of fencing. Defies rust, holds unruly animals, can't sag, can't break down and is the last word in economy.

Send for Dealer's Proposition

OPPORTUNITIES IN ACCESSORIES

THE popularity of the automobile has brought much business to the stores of Canadian hardware merchants who have taken on the sale of automobile accessories, and in many cases car agencies, and with such an evidence of the continued development of the industry, hardware merchants to-day are confronted with a very fertile field for increased trade. Many of the largest and best equipped garages in the smaller towns and cities are conducted by hardware merchants.

The hardware merchant to-day is faced with one of the greatest opportunities for developing the scope of the trade which could well be imagined. A glance over the trade in Canada indicates without doubt that the most successful merchants are those who have promptly taken hold of opportunities when they have presented themselves.

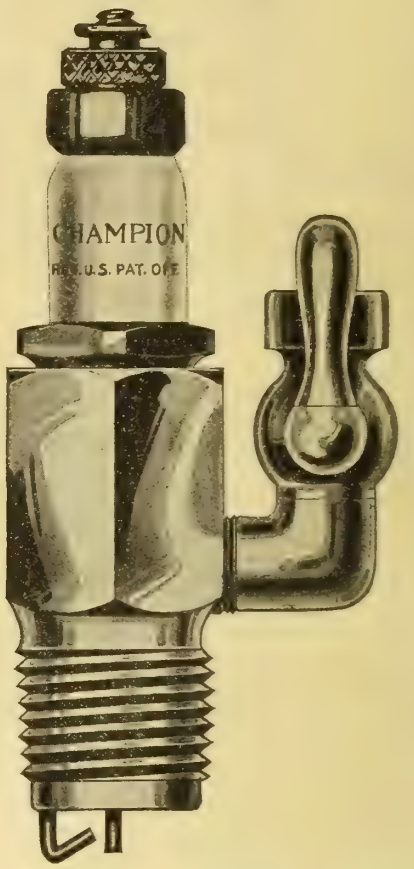
A great number of merchants throughout the provinces of the Dominion and located in centres of greatly varying characteristics have made huge successes of the auto accessory line. It is always found that where this line of goods is not carried, it is because the matter has received no detailed consideration, but sufficient investigation early proved to the merchants who are now carrying this line with profit, that with the general favor of both the buying public and the manufacturer, there was little reason for expecting anything different to the result which has been achieved. The present rapid development of the automobile industry is providing golden opportunities for wide-awake merchants.

Cold Weather Sales Producers

Champion Priming Plugs will stimulate your auto accessory trade and produce extra profits easily and in larger volume during cold weather, than any other accessory you sell.

Every Ford and most every other car should now be equipped with

Champion Toledo PRIMING PLUGS



CHAMPION PRIMING PLUG
List Price $1.25

They place the gasoline into the cylinders, right where it is needed to catch the spark and start the motor humming.

Champion Priming Plugs save time—eliminate starting delays and excessive cranking when the motor is cold.

The first cold snap will mean a big rush for Champion priming plugs.

Order from your jobber, right now, a sufficient quantity to take care of the demand that winter is bound to create.

Insist on genuine Champions and reap the triple benefit of increased sales, extra profits and satisfied customers.

ANY JOBBER CAN SUPPLY YOU.

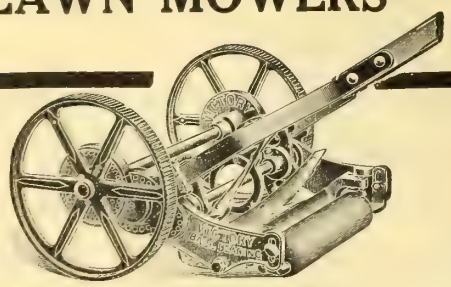
TOWNSEND'S

LAWN MOWERS



BUILT LIKE A WATCH

TOWNSEND MOWERS are superior in every feature of design and construction. In strength, durability and high character of work they do, they have no rivals.

No Noise but the Swish of the Blades

All Blades are of crucible steel, oil tempered. **Ball Bearings** originally adapted to lawn mowers by Mr. Townsend, insure easy, quiet operation. **Triple Compound Gears** permit of maximum strength with minimum weight. They are entirely enclosed and prevent dirt or grass clogging the pinions. Handsomely finished in colors and gold.

We manufacture a full line of mowers for use on Golf Courses. Send for complete illustrated catalogue and trade terms.

The Mark of Aluminium Satisfaction

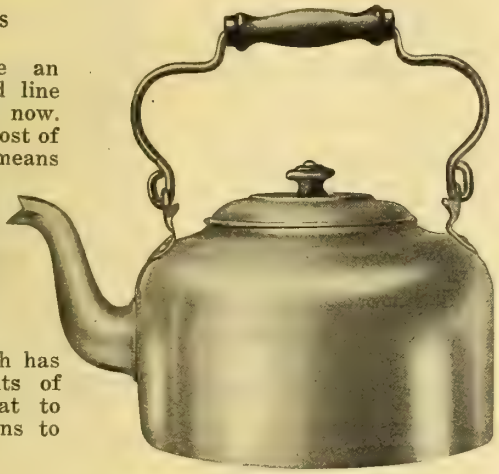
WARE MFG. CO. LTD. OAKVILLE PURE ALUMINIUM WARE

With Aluminium fast taking the place of other kitchen wares because of its superiority, there is sure to be a big demand this fall and winter. Aluminium ware is the most economical kitchenware the housewife can use.

"Oakville" on your stock of Aluminium ware is a guarantee that every article will come up to your claims for it—it's our guarantee to you and your guarantee to the housewife.

The "Oakville" range of samples for 1917-1918 is comprehensive; styles are most approved and workmanship of the highest standard.

Teakettles



Teakettles are an especially good line to feature just now. The advanced cost of other metals means that for the price of an ordinary nickel-plated kettle you can sell your customer an "Oakville" Aluminium Teakettle which has so many points of superiority that to show one means to sell it.

Get Our Price List

Write to-day for our illustrated catalogue showing complete range of Teakettles, Tea and Coffee Pots, Sauce Pans, Pudding Pans, Preserving Kettles, Double Boilers, Bread Pans, Muffin Pans, Drip Pans, Roasting Pans, Pails, Measures, Baking Dishes, etc. Then send for a trial order and commence getting these extra profits right away.

Special Discounts to Foreign Buyers

Our advertising now appearing in important national mediums is sending the women to buy Aluminium Kitchen Utensils. In your community they will buy from you if you let them see that you have "Oakville" Aluminium Ware which

"Will Outwear Any Ware"

The Growing Use of the No. 6 Means a Growing Demand for a Good One.

Daily the No. 6 battery is growing in usefulness, and the better acquainted the public become with its possibilities, the more critical they become in their choice.

The "Master" No. 6 is the battery par excellence—the battery that gives the maximum of electrical energy—the battery with the longest life.

Get this—

The "Master" has the smallest amount of energy loss while on your shelf because of the protection afforded by the Safety Cap (Patented and used exclusively on the "Master").

Don't overlook the possibilities of the "Master" flashlight. Christmas trade will be heavy.

Get your order in early.

Make PRYEX a LEADER

Pyrex ware interests the household buyers of your community—the women who want this original transparent oven-ware.

Sell a woman a Pyrex pie plate or baking dish and you've made a repeat customer—for when a woman starts to Pyrex her kitchen she is never content until she has full equipment.

PYREX TRADE MARK REG. **Transparent OVEN-WARE**
Has the name on every piece

WILL NOT BREAK IN OVEN USE

Ask for illustrations of full line.

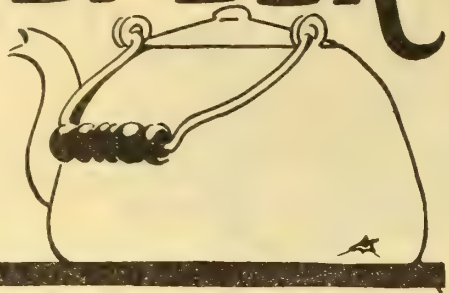
VOLPEEK

WILL STOP THE LEAK



VOLPEEK is the most practical and economical method on the market to-day for mending holes in all kinds of pots and pans, graniteware, aluminum, tinware, etc., etc.

It is like a stiff putty. Easily applied with the fingers. Requires no tools. Repairs the article quickly, neatly, permanently, and is sanitary, as food cannot lodge under mend. Costs only ½c for each mend.

There is a good market in your town for VOLPEEK. One of our attractive 3-color stands on your counter will yield you an extra profit each month that you have not been getting in the past. Take advantage of this to-day.

Price of Display Stand containing 44 packages $3.60—Retails for $6.60.

Send your order to-day to your wholesaler or direct to us.

EXPORT ORDER. We will send prepaid by parcel post, to any part of the world, 1 stand of "Volpeek" with advertising matter, for 16 shillings.

EXCLUSIVE AGENCIES granted where we are not represented.

VOLPEEK MANUFACTURING COMPANY
P.O. BOX 2024 - Montreal, Canada

For the Indoor Painting Season

Keep your paint sales up. People are now living indoors, which means an increased demand for inside paints. Show your customers how they can make over their floors at less cost than buying carpets and also make the housework lighter by using Crown Diamond Floor Paint. This is but one of the quick selling Crown Diamond Paint Products. There are many others which will mean a rapid turnover of your paint stock as well as a generous profit to you. It will pay you to write now for full information of the complete line.

McARTHUR, IRWIN, LIMITED

If interested, tear out this page and keep with letters to be answered.

The Businessman's Mind

BANKERS are supposed to have a particular character of mind; Lawyers and Doctors likewise; Teachers also. These minds have both narrowness and breadth. They see widely and deeply in their own realms, and narrowly and sometimes shallowly in regard to matters outside their particular worlds. At least, this is the common supposition.

THE Businessman—What should be the character of this mind? —What is the mind of the Manufacturer, the Wholesaler, the Retailer? Certainly the Businessman's mind should be broad. It should be something of the Banker's, something of the Financier's, something of the Statesman's. The Businessman should see broadly. The horizon of interest and of inquiry for him should be a far one.

The happy thing about it is that the business man—manufacturer, jobber, retailer—can have the far outlook—this by the reading each week of a newspaper with a far outlook—

The Financial Post of Canada

This is a business man's paper—it is a paper for bankers, for investors, for trustees, for financial men. But it is also a newspaper for merchants, very much so.

Merchants need to know markets and market tendencies and market factors. They need to know conditions, local and remote. They need information to buy right and to sell safely.

And the knowledge they need they can have for the insignificant sum of $3 annually.

THE FINANCIAL POST is a most readable paper—positively enjoyable to the layman reader. It makes any man broader minded, and every business man a better business man. Growth in bigness at $3.00 a year!

Send for free sample copy to the Publishers, or sign and mail the attached coupon.

THE FINANCIAL POST OF CANADA
143-153 University Avenue, Toronto

.....1917

Please enter me as a regular subscriber, commencing at once. If I am satisfied with the paper I will remit $3.00 to pay for my subscription on receipt of bill.

Advertising a Labor-Saver

The merchant's greatest labor-saver is not necessarily an adding machine. It is more likely to be advertising.

A great factor in the cost of goods is the time it takes to move them. *Advertising and trade-marks,* working together, are the most efficient movers of goods—consequently the greatest reducers of selling cost.

The producer who places his trade-mark on his goods and advertises it nationally, is so sure of their quality that he is willing to stand the full force of possible complaints.

The whole tendency of trade-marks and advertising is to raise qualities and standardize them, while reducing prices and stabilizing them.

INDEX TO ADVERTISERS

Occasionally advertisements are inserted in the paper after the index has been printed. The insertion of the advertiser's name in this index is not part of the advertising order. The index is inserted solely for the convenience of the readers of the paper.

HOYT METALS

MEMO
NOV. 3rd.

for your Babbitt Metal file

Selecting Raw Materials

Of paramount importance in the manufacture of metal alloys is the selection of the raw materials used.

This has always been a Hoyt strong point.

Our splendid buying connections gives us the world to select from and enables us to not only select the best, but to get the best possible price.

What this means to you as a user or seller of Hoyt metals cannot be over-estimated. It means, to say the least—right goods at right prices—alloys that stand the test.

HOYT METAL CO., Toronto

NEW YORK, N.Y. LONDON, ENG. ST. LOUIS, MO.

Wanted

POSITION WANTED

TRAVELLER — ENERGETIC, SUCCESSFUL, excellent connection Western Ontario hardware, plumbing and machine trade, seeks kindred lines; highest references. Box 10, Hardware and Metal.

POSITION WANTED BY HARDWARE SALESman, as manager or salesman, having twelve years' experience in retail hardware business. Address Box 501, Hardware and Metal, Toronto.

AGENCIES WANTED

WANTED — MANUFACTURER'S AGENT IN Ontario and Quebec to represent one of the largest manufacturers of cream separators in the world. Very attractive proposition can be made a good man who is acquainted with the trade and the territory, and who can sell a high-grade cream separator at an attractive price to dealers only. Give full particulars in first letter. Box 499, Hardware and Metal.

FRENCH ELECTRICAL ENGINEER HAVING large established clientele, desires direct agency for France of firms having large outputs of general equipment, dynamos and motors, circuit-breakers, conductors, motors, etc., as well as home labor-saving devices, irons, dryers, massage outfits, percolators, etc. Headquarters in the heart of Paris, near the Opera. Write E. A. B., Room 444, 14 Philipps Square, Montreal.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

MISCELLANEOUS

ADDING TYPEWRITER WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314 Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fenson Elevator Co., Toronto.

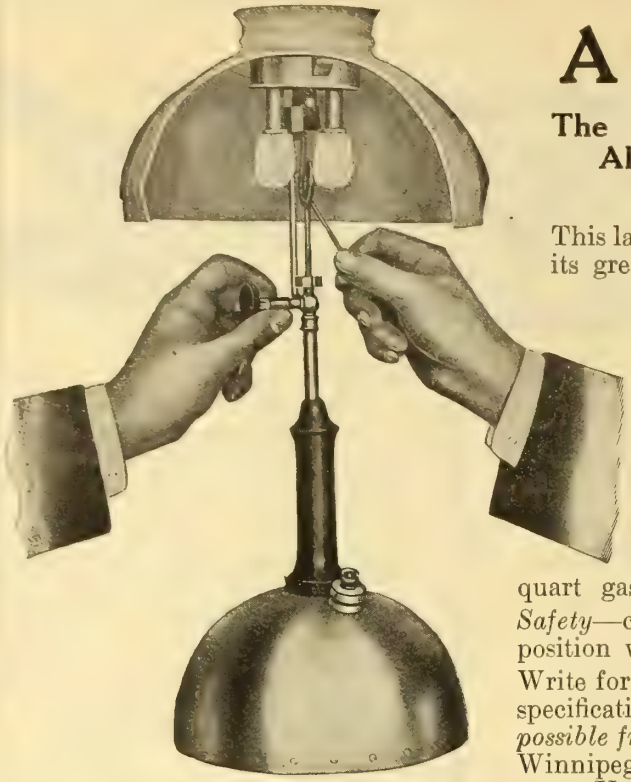
THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

WANT ADS.

If you want a buyer for your business, or have a situation to fill, or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

TRY IT OUT

A QUICK SELLER!



Here is how it is lighted

The Lamp that threw the Alcohol Torch into the discard.

This lamp will sell quickly because of its great convenience and economy. Illustration on left shows the method of lighting the modern

"MATCH-O-LITE" LAMP

It needs no torch. Uses no alcohol. One match lights it. Burns for 15 hours on 1 quart gasoline. 300 candle power.

Safety—can be held in upside down position without fear or danger.

Write for circular giving styles and full specifications—then *order as early as possible from* your nearest wholesaler in Winnipeg, Saskatoon, Calgary, Edmonton or Vancouver and cover yourself for Fall and Winter requirements.

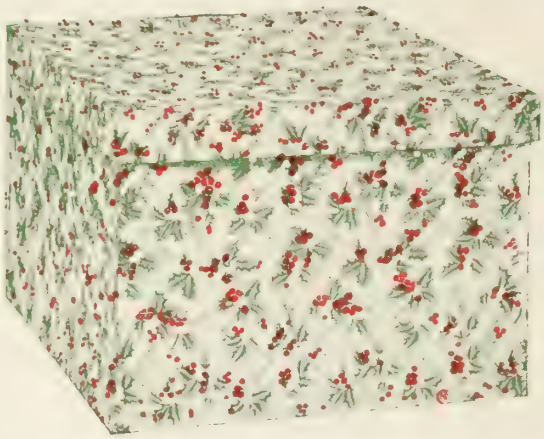
McClary's "Model" Teakettles

In Handsome Gift Boxes



Will Increase Christmas Sales

This year, more than ever before, the tendency of Christmas shoppers will be towards gifts of permanent worth—of practical everyday usefulness.

For this reason scores of your customers will buy McClary's "Model" Teakettles, if they're properly displayed — get one of our attractive window display cards.

Christmas Trade wants something showy. Therefore without any additional expense to you we have packed our "Model" Teakettles in handsome boxes, beautifully decorated in holly design.

Get a supply of these "Model" Teakettles at once. They make a sensible gift that every housewife will be glad to get and use.

Two sizes—No. 750, 8½ inches or No. 900, 10¼ inches in diameter. Made of heavy nickel-plated copper with flat bottoms to fit any stove. Rigid handle to prevent unexpected tipping. Cover is placed on the side so hand will not come in contact with escaping steam, and is strongly hinged—always in place. This is the original type of side-filling kettle and it has the ample capacity, strength and lightness to insure good work.

NOTE: Our new prices make big business possible. If you haven't received our price list write us at once — don't wait until the rush begins.

CANADIAN REPRESENTATIVES: **A. MACFARLANE & CO., MONTREAL**

Continued good times in Canada are essential to victory; these good times are dependent entirely upon Canadians.

The success of your business will be gauged by the degree of success of the

Victory Loan

Canada's prosperity depends upon keeping our factories and farmers busy with more orders. To enable the Allies to continue buying in Canada, we must loan them the money the same as the United States is doing. If we don't do this, their purchases will stop.

When you Buy a Bond:—

You make an investment as safe as any in the world—a Canadian Government Bond that pays you first-class interest.

CANADA'S PATRIOTIC WIN-THE-WAR BATTERY
It is your duty to supply it with the necessary ammunition

You also give your personal pledge that Canada is in this war to the end.

You are, therefore, a patriotic citizen and a good business man when you

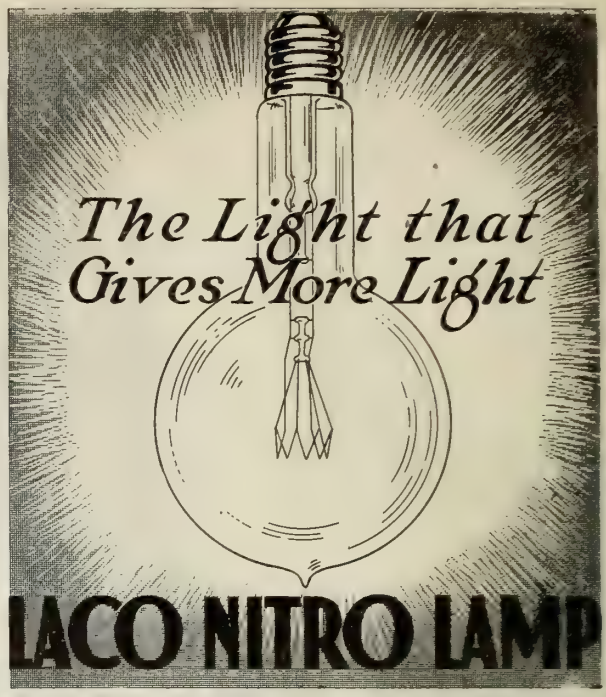
So, specify them when ordering. They are:



Now is the Opportune Time

to increase your sales and profits by offering to the manufacturers and merchants in your vicinity—

LACO NITRO LAMP *"The light that gives more light"*

Every manufacturer and merchant in Canada during the fall and winter months is faced with the problem of proper lighting. Most manufacturers in Canada know that the Laco Nitro Lamp offers the best solution of this problem.

Because—

1. **It gives a clear, bright white light most closely approximating daylight.**
2. **It gives greater comfort, less eye strain.**
3. **It insures increased production.**
4. **Makes more accurate workmanship possible.**
5. **Reduces accidents and spoilage.**

The Laco Nitro Lamp has a tungsten filament in a nitrogen gas-filled bulb. It is the greatest development of the Electric light bulb, and because of its superior construction and the materials used it gives more light per watt than any other type of lamp, hence it's economical.

A Westclox Alarm

Good-Will

DEALER good-will is one of the greatest assets the manufacturer may possess. To conserve it, he must maintain an attitude of consistent fairness in all dealings—he must be loyal, above all, to his regular customers.

The Western Clock Company fully appreciates this principle as a firmly established law of good business.

Since the war began we have manufactured annually a great many more clocks than ever before. Yet our supply has never fallen so far short of adequately meeting the demand.

The only just basis upon which to meet such a condition is to cope with it just as the retail dealer would if placed in a similar position with *his* customers.

We must be loyal, first, to our regular customers. Their requirements must be met in proportion to their patronage of previous years. Thereafter, we take care of additional requirement to the best of our ability.

This, we believe, is the fairest avenue to dealer good-will—and a policy which the trade will appreciate.

Canada's Victory Bonds

A Safe and Profitable Investment that will Keep Your Business Booming

WHAT would happen to the earnings of the farmers, mechanics, laborers, clerks and other workers in your community if Great Britain stopped buying food, munitions and other supplies in Canada.

There's only one answer—those earnings would, in nearly every case, be greatly reduced, and, in many cases, would stop altogether.

This would certainly hurt your business—might even be disastrous to it.

Therefore, it is clearly in your interest to see that no effort is spared to keep Great Britain buying in Canada.

And in order that Great Britain may continue purchasing in Canada her supplies of every kind—thus providing a sure market for our farmers, and assuring the earnings of the workers in every branch of industry—Canada must extend credit. This can be done only by the sale of Canada's Victory Bonds to the Canadian people.

Remember, you are not asked to GIVE anything. Canada asks you to buy Canada's Victory Bonds. That is, to invest ALL THE MONEY YOU POSSIBLY CAN in an interest-bearing security of the highest order—the signed pledge of Canada, backed by all its resources.

This investment is the very best you could make, because the principal is safe, the interest good, the bonds acceptable at any bank as the security for a loan, or saleable at any time.

Do your part to keep Canadian business prosperous by helping to grant the credit that is necessary to enable Great Britain to continue to buy in Canada.

Take this method of helping your country while at the same time giving your own business prosperity a firmer basis for permanence.

Buy Canada's Victory Bonds

and Recommend Them to Your Customers

Issued by Canada's Victory Loan Committee
in co-operation with the Minister of Finance
of the Dominion of Canada.

—KELSEY—

is in a class by itself. It does not enter into competition with other furnaces. It costs more than an ordinary furnace, but your customers get better satisfaction.

The "KELSEY" has three times the weight and heating surface of other furnaces.

The "KELSEY" system of heating ensures good ventilation and an **even distribution of heat.**

The ZIG-ZAG TUBES are entirely different from any other warm air heater. The special form of construction gives them 61 square feet of radiating surface for one square foot of grate surface. With an equal quantity of fuel a "KELSEY" will warm two or three times more air than an ordinary furnace, and circulate it more evenly.

These tubes form fire pot and combustion chamber.

They are in contact with and overhang the fire, and are heated on all sides by conduction, by radiation, and by the burning gases.

BE SURE TO WRITE FOR FULLER INFORMATION.

THERE'S all the difference in the world between a dry, warm garage and a cold, damp one. There's a difference in "upkeep-cost" of the autos contained in them. Frequently the cause of this difference is the difference between door equipment so called and

Stanley Garage-Hinges and Butts

STANLEY Garage Door Hinges hold the door shut weather-tight when closed and prevent sagging.

STANLEY Garage Door Hinges are extra strong and are well designed. They are equipped with ball bearings. The long leaf gives these hinges powerful leverage strength and keeps the door in the proper position The ornamental corrugation also adds to the strength.

No. 1458 is the strongest garage door hinge made. It is 36" long and is made right and left hand. For the heaviest of doors.

No. 1457 is 24" size for the average weight garage door. Also made in 10" size. Usually a 24" is put at the top and bottom with a 10" in the middle.

No. 252 is one style of heavy ball-bearing Butt with four ball-bearing washers.

To-day send for booklet "STANLEY Wrought Steel Hardware for Garage Doors." Every hardware dealer should handle STANLEY Garage Hardware.

We suggest that you write us for particulars.

"Advertising Always Pays"

Hardware Merchant's Statement to the Trade Declares "Advertising Invariably Pays" —Brevity, Illustration, Consistency and Pointedness Are Salient Features —Ad. Suggestions on File.

Editor's Note.—C. C. Falconer, whose ideas on newspaper advertising have formed the basis for the following article, will contribute another article on Window Display Advertising at an early date. Mr. Falconer's store in Winnipeg is located in what is known as the foreign district and 75% of his trade comes from those of foreign extraction. "One price to all" has been one of the principles on which Mr. Falconer has conducted his business and that his trade appreciates such a standard is more in evidence every day. These customers have faith in the reliability of the store, knowing that they cannot "beat down" the price by any amount of argument. Careful attention and sympathetic understanding appeal strongly to this class of trade.

The paper which Mr. Falconer uses is practically confined to that portion of the city which his store serves, having a circulation estimated at about 6,000. However, Mr. Falconer's business is secured all over the city. The location of his store does not prevent his securing business from those residing in other portions of the city, this business being handled in a large measure over the phone or by Mr. Falconer himself on his trips uptown.

THE following suggestions in regard to retail advertising are the result of practical experience gained in dealing with this subject by C. C. Falconer, who carries on a hardware business in a district of Winnipeg more or less foreign, and knows something of the value of advertising.

"Feeling grateful as we do to HARDWARE AND METAL for many valuable suggestions we have received," writes Mr. Falconer, "my only wish is that I may impart a few suggestions as a result of my experience."

"Advertising is a big question and one is very apt to wander in such a large field unless he defines his topic. I will therefore select two forms of advertising, which, although quite different in their application, make a good team. They are newspaper advertising and window advertising."

A reproduction of one of C. C. Falconer's newspaper advertisements which brought splendid results. The points as regards "a bold, catchy heading"—"the use of a cut"—"featuring one article"—"the use of short, clear, definite statements"—are all brought out effectively in this ad. "Falconer's" name always appears in the one style of type at bottom of ads.

Newspaper Advertising

Dealing with the subject of newspaper advertising, Mr. Falconer says:—

"We have been consistent newspaper advertisers, never letting up at any season of the year, for I consider that the first principle of advertising is much the same as that which defines the character of the store itself, namely, consistency. Our advertisements occupy the same space in each edition of the newspapers so the readers will always know where to find them. We use a bold, catchy and appropriate heading with a short paragraph following in small type to complete and drive home the matter introduced in the heading. We prefer featuring one or two articles of importance with good illustrations. An advertisement without a cut seems similar to a person introduced by proxy. All the honeyed words of an ardent lover through the mails to his prospective bride whom he has located through the advertisements of a matrimonial bureau, would not be of much success without the aid of a photograph. So, without the aid of the artist in the advertising of goods, the advertisement is drawing too much upon the public imagination."

"If in his sales talk the merchant is careful in the selection of his phrases and weighs every word so that it may have the desired effect, how much more important it must be to use equally as much time and good judgment in the framing of talks to thousands where the merchant has not the advantage of personal contact or easy access to the goods themselves."

"The merchant must appreciate that the reader as a rule is a busy person and

not inclined to interest himself in the retailer's affairs and that it is therefore up to the merchant to make the advertising matter interesting and to the point. The readers' attention must first be secured and then his interest aroused to such an extent that he will investigate the subject matter of the advertisement.

"We use short, clear, definite statements in paragraph style with sufficient space between to equal a pause in conversation. This makes it easy to read, and allows each sentence to make an impression. Exaggeration of facts should at all times be eliminated, for the public as a rule are suspicious, especially if they have any cause whatever to judge the merchant as being addicted to such practices. The likelihood of this tendency arising is all the more reason why the greatest number of customers should know the merchant as of reliable character and a man on whom they can at all times depend. One of the greatest assets any store, of whatever size, can have, is to bear a reputation for honesty which will allow of parents sending their children to the store for supplies with a knowledge that they will receive the same honest treatment as they might be accorded themselves. Any merchant who plays false to that great faith is playing with fate and committing business suicide.

Advertise the Price

"Always advertise the price—why should you not? If you know the goods are worth the price—tell everybody. Failure to quote a price oftentimes constitutes the weak link in an otherwise strong chain. Have your name or trademark in bold type at the bottom of the ad, and have it always the same size and style so that its distinction may become familiar.

"You then wait for your customers to rush in. Do they always rush, or do they straggle in? and have we not often experienced a decided hesitancy on the part of the public to respond to the call? Under such circumstances were you not often brought face to face with the question 'Does advertising pay?'

Advertising Always Pays

"I do not think it is necessary to be an optimist to know that advertising pays. Perhaps it does not always pay as promptly as we would like, but nevertheless it pays, and that is the main thing. That particular advertisement which you were inclined to think was so much wasted money was really working all the time. The goods, as far as the customer was concerned, were sold, and delivery merely postponed. There is always that element of publicity in an advertisement which refuses to allow the public to forget that you are always at their service, and in time your name becomes synonymous with the goods you sell."

In the foregoing exposition of the subject of retail newspaper advertising, Mr. Falconer has expressed some valuable suggestions which are the result of putting into effect some of the salient features of newspaper advertising as outlined in HARDWARE AND METAL at various times. Brevity, illustration, consistency, pointedness and the constant repetition of the real facts of the matter are among the chief points to be watched in framing all newspaper advertising.

This season of the year offers special opportunity for timely advertising. Many hardware lines for fall and winter are on the shelves waiting for the demands of the usual trade and these lines should be featured now.

Accompanying this article are several illustrations of seasonable advertising among which is a stove advertisement used by C. C. Falconer of Winnipeg. This advertisement with its stove illustration bears out the main points of Mr. Falconer's statement to the trade concerning newspaper advertising.

Recording Advertising Suggestions

A practice followed by Mr. Falconer, which should be of help to other retail merchants in framing newspaper ads, is in connection with the keeping on record of suggestions for seasonable advertising. During the holiday and other distinctive seasons of the year when special attention is paid to advertising matter, oftentimes a demand is noticeable for certain articles which have been overlooked in the advertisement. This with other information, which in the usual trend of affairs comes to hand, is noted by Mr. Falconer and put on file with copies of all the advertisements he uses in the newspapers. On the next occasion when similarly seasonable advertising is required that information is at hand to be incorporated and the value of the ads is therefore increased considerably.

"Seasonableness" Is Main Factor

The idea of "seasonableness" in ad-

(Continued on page 31.)

Clippings from seasonable advertisements which have been published by retail hardware men from coast to coast. Stoves, lanterns, oil heaters, fall and winter auto. acessories, sporting goods, are lines on which the retail hardware man is making a strong bid for business.

Dealers' Opportunity for Tire Profits

Tire Manufacturer Tells the Possibilities Existing in Every Community—Analyzing the Situation—Getting Down to Your Own Market—Hardwaremen Get Preference.

Editor's Note.—The figures given in the following article apply to the United States. However, they form a basis from which Canadian hardwaremen can figure their possible market on tires and tubes. Canada at the end of this year will have approximately 200,000 motor cars in use. The average number of tires used per car is 5, which means that at least 1,000,000 tires and a larger number of tubes will be sold in 1918. These figures can be further reduced to local conditions and the market in each town arrived at with the possible sales each hardwareman can make.

Hardwaremen from East to West are finding the auto accessory field an exceedingly profitable one. Those not yet handling these supplies have a splendid opportunity ahead of them and we know the Canadian hardwareman will make the most of it.

MANY dealers in hardware look upon the sale of automobile tires and tubes as a line entirely foreign to their business, although large numbers of automobiles are being used and the sales possibilities for automobile sundries are very large. "An analysis of the market will visualize this opportunity to any dealer," says John Morgan, Vice-President of The McGraw Tire & Rubber Company.

Analyzing the Situation

"It is not through lack of progressiveness nor due to poor business policy that dealers do not take on the sales of tires and tubes, but in many cases, the delay is due to their lengthy consideration of the prospective sale of these articles.

"In order that we may assist dealers in a fair and careful consideration, we will review the selling possibilities, in view of arriving at a definite decision.

"Let us determine the demand. Is the demand established or must it be developed? We all know that the sale of automobile tires and accessories is established. The motor car has come to stay. The sale is creating an enormous demand for its sundries. Improved road conditions and necessity for speedy economic travel have developed the motor car into a vehicle which is more constant, and less and less dependent on the seasons. To-day the automobile is an absolute necessity. Motor cars are used constantly throughout the year.

"Now, granting that there is a firmly established demand, a dealer should consider the amount of the demand. The end of the present year will see over 4,000,000 automobiles in use in the United States. Stop a moment and think what this means. It means that these 4,000,000 automobiles will have used over 24,000,000 automobile tires and over 30,000,000 tubes during the year 1917.

Getting Down To Your Own Market

"This demand is enormous and increasing at the rate of about 40% each year, but Mr. Dealer often says: 'Certainly there are tires sold, but how many could be sold in my town? How much profit can I make from selling them?'

"Any dealer who wishes to know the exact sales possibilities open to him, should make a count of the car owners who trade in his town or district, and multiply the number of cars by the tires, 5, which will be used for each average car. Thus, a definite figure is secured as to the number of tires purchased in the dealer's district.

"For example, let us consider, according to the 1917 car census, a town of 7,000 population, which has approximately 200 cars. If each of these cars uses 5 tires per year, 1,000 tires will be sold in the town, and at the average profit of $7.50 per tire. This means a profit to the tire sellers of this town of $7,500.00.

"Considering that the dealer may sell only ten car owners in his district and that each customer would buy his average amount of tires, the dealer's profit would be nearly $375.00 a year on automobile tires and tubes. Accessories will not spoil when kept in stock and with even a small amount of sales energy the rate of stock turnover and the profits are surprisingly large.

Hardwaremen Get the Preference

"All hardware merchants have a large number of automobile owners as their customers. They sell these car owners such supplies as automobile polishes, bolts, wrenches, hammers, pliers, and other tools used about the car. It is then a simple matter to secure the customer's tire and tube business. In most cases the customers would prefer to buy his tires and tubes from the old-established hardwareman with whom he has been doing business for years.

Readjustment in Steel Trade

Conditions in Nova Scotia Improving—Many Advances in Raw Materials, Supplies and Wages

IT speaks well for Canadian manufacturers that the dislocation of business in Nova Scotia some few weeks ago, owing to the sudden cancellation of shell orders, is being readjusted rapidly. Col. Thos. Cantley, Chairman of the Nova Scotia Steel & Coal Co., in reviewing the present position of the iron and steel industry says in part:

"It is true that very little is being done in munition work in Nova Scotia, but the demand for other iron and steel products is heavy and all indications point to a busy winter.

"Owing to constantly recurring advances in wages during the past three years, together with the increased cost of mining and manufacturing supplies of every description, the cost of raw materials, such as coal, coke, ore, limestone, and other fluxes, is much higher than in pre-war days. This is notably so as regards coal and coke, and the production cost of pig iron, steel ingots, and all subsidiary products is consequently very much enhanced. With an active demand, however, which calls for the full output of all mills and forges, satisfactory prices are being maintained for the finished product. This condition of affairs is likely to continue for some time.

"As to the condition of the industry ten years hence no man knoweth—but we passed safely through many periods of stress in the past thirty years, and will undoubtedly do so again.

Getting the Retailer to Collect Bills

A Timely Consideration for the Fall Campaign—Protecting Accounts — How Confidential Relations With Bank May be Source of Strength to the Merchant.

Editor's Note.—One of the great problems that the merchant is continually facing is that of collections. It is the vital question.. Problems of merchandising are serious enough under present conditions of high competition, but when the goods are sold the merchant is still faced with the problems of collecting his accounts, and on his success or failure in this one thing depends the success or failure of his whole business. Ill-advised credit is the most fruitful source of failure. Just now when the merchant is planning his fall campaign special attention should be given to this important matter. Now is the psychological moment to get after outstanding accounts. The harvest is over, and the farmer has received the money for his crops. He is in a better position to pay his bills now than at any other season. Moreover, all people who are directly or indirectly dependent on the activity of the farm, and there are many of these, are also in a good position to pay. This is a matter therefore that should have the dealer's closest attention during the fall months. The accompanying article that appeared in a recent issue of The Financial Post puts the situation so plainly, and is so full of suggestions that it is reproduced herewith.

THE branch manager who has to do with the small retail merchant is something more than a mere dispenser of credit. After making a loan he naturally becomes interested in the business affairs of a customer, in watching that the "margin of safety" is maintained. He establishes himself as a sort of financial adviser—and if he can make the relations those of a "business confessor" so much the better. Intimate relations between the banker and his customer are to their mutual advantage at practically all times.

Discussing the relations of bank and retailer with a bank manager in a city business district where there are many small accounts, I asked him what he considered was the most important factor in the solvency and stability of the retailer. From the fund of experience of many years in one community, he replied immediately that it was keeping close tab on the charge accounts. The bugbear of the small retailer, in his opinion, is the uncollected account—which so often becomes "uncollectable" after being "uncollected." He referred to an instance which emphatically covered his point:

"Only this morning there was a grocer in here who was bemoaning the disappearance of a customer who owed him $70. He had given up hope of making the collection. I figured out for him that on the amount lost—lost to all intents and purposes from his private pocket—he had dropped the return on, say, $700 of business. When he started out to figure what $700 business meant in his store and what it would mean in time and effort to get new trade to that extent. I think he caught my point that there was as much profit in checking up current accounts as in developing new ones."

The bank manager must of course recognize that the average retailer is in competitive business, that he must make certain credit allowances, and that he cannot always make hard and fast rules. But the fact remains that it is the experience of branch bankers who have been in their fields for years that the great majority of failures which have come to their attention have been the result of loose credits. The manager I have referred to impressed upon the retailer at all times the necessity of watching accounts. System is of course necessary but it need not be elaborate; the trouble is that too many small merchants have practically no system whatever.

In a general way the rule is good that, when a man has a weekly account, he should be asked to pay at the end of that time and that there should be no further credit unless there is ample explanation and assurance. The same would apply to a fortnightly account or to a monthly account—although the latter should not be encouraged unless there is a good understanding between merchant and customer. Also the manager may quite well advise the retailer to keep an attentive ear for news concerning his customers; changing conditions as regards local industries or personal affairs may often have a direct bearing upon the customer's proper current rating.

The foregoing merely illustrates one way in which the manager may exert an influence in the affairs of the retail merchant customer. The opportunities are frequent for suggestions or advice along practical lines, which will not only improve the account for the bank but will permit of better financial service by the bank to the customer as well as tend to increase the latter's business profits.

In many respects the small merchant makes errors of neglect or thoughtlessness which may have a direct bearing upon his credit standing with the bank and with the trade. For instance there is the reluctance—in some cases amounting to repugnance—in giving particulars about business affairs which are recognized as essential in establishing a business standing. These may be such as asked for by the mercantile agents for trade circulation or by the bank manager for confidential guidance in making a credit recommendation.

A manager told me the other day that the attitude of some merchants towards the representatives of Duns' or Bradstreet's was astonishing. They did not seem to recognize that these institutions were giving a service which had become to be a matter of routine with business generally and that they themselves were the only ones to suffer from failure to give proper information. There were business men "along the street" said this manager, who were in comfortable financial positions who were much more poorly rated than they deserved merely because they assumed a frigid attitude when the representative of the mercantile agency made his call.

This attitude is often maintained by applicants for bank credit. In such cases it becomes necessary for the manager to explain that he must have a candid statement of the customer's affairs. This may involve a verbal explanation or an auditor's statement and may often make it necessary for the manager to make some practical suggestions to a business man as to simple but effective methods of keeping track of his affairs. On the other hand there are many such cases in which the manager's knowledge of the standing of the individual in the community and his reputation for business integrity may be the deciding factor in recommending a loan which for another client with an evidently sound statement would not go through. Then of course the object for which funds are being raised is very important.

The question of the confidence of the bank in its customer is a matter which managers should discuss candidly. In many cases the retailer is not absolutely honest with his banker and in the long run his credit suffers. I know one manager who used to emphasize the point of the necessity for straight statements by telling the retailer that he stood in the same relation to the banks as his customers stood to the trade. The citizen who is not scrupulous may "jump" one account and go to another store but eventually if he keeps it up he will lose

(Continued on page 47)

Canadian Industrial Boom

$50,000,000 Shell Orders From U.S. Will Maintain Healthy Trade Conditions This Winter.

AN announcement which may be expected to have a widespread effect upon Canadian industrial enterprise and commercial conditions in general is to the effect that new munition contracts valued at approximately $50,000,000 have been received in Canada from the United States. These contracts are said to be overflow orders and indicate that American munition plants are taxed to capacity.

W. G. HARRIS, Jr.

Vice-president, Canada Metal Co., who attended Washington in the interests of Canadian munition manufacturers. The success of their mission is outlined herewith.

The receipt of new orders finds Canadian industry in a peculiar condition owing to the fact that manufacturers considered the industry was practically done when Imperial Government orders for shells of small calibre fell off and only a few orders for larger shells were forthcoming. For this reason many plants are in various stages of readjustment for the manufacture of other products, some others have fitted their plants for the manufacture of larger shells and still others are lying idle with much of their machinery disposed of to U. S. manufacturers.

However Canadian industry welcomes the receipt of further orders and with munition plants running at full blast all winter many difficulties will be eliminated and the industry put on a firmer basis than ever.

This spectacular development crystallizes much of the groping toward co-operation with the United States that has been apparent for some time. It was clear to farsighted manufacturers that Uncle Sam was going to need assistance and that Canada was in a position to step into the breach. As a result some Canadian manufacturers have located plants in the United States. On the other hand some American manufacturers have made connections in Canada. It looked certain, not so long ago, that new industries would develop in Canada out of this situation. The organization of the American Steel Products Corporation with a capital of one million dollars to take over the plant of the Dominion Steel Products Co. at Brantford, Ont., is a concrete result.

The arrangement now going into effect organizes the situation and provides machinery for the utilization of Canadian resources to help the United States get quicker deliveries on their tremendous needs. It can be regarded as merely the forerunner of bigger things. Uncle Sam needs more than shells, he needs ships and parts therefor, clothing, supplies of all kinds.

The placing of American orders in Canada is of tremendous importance in its bearing on the business outlook. Farsighted men were preparing for a gradual "letting down" of activity this winter. Factories will now, however, be busy and help scarce as a result. Our remarkable era of war prosperity has been given an indefinite lease of life.

U. S. PIG IRON PRICES FIXED

E. H. Gary, Chairman of the Committee on Steel and Steel Products of the American Iron and Steel Institute, has issued the following statement:—"By agreement between the General Committee on Steel and Steel Products of the American Iron and Steel Institute and the War Industries Board, approved by the President, the base price of No. 2 foundry iron and also basic iron was fixed at $33 per gross ton, f.o.b. cars at furnace.

"From these base prices the sub-committee on pig iron, iron ore and lake transportation has reported to the general committee a list of differentials which the general committee believes is fair and reasonable and in accordance with the usages of the trade, and therefore recommends to the iron industry that the same be adopted to take effect immediately. It is hoped that there will be no hesitancy in accepting this recommendation.

"The grade of No. 2 foundry iron to be equivalent in analysis to: silicon, $1.75 to $2.25; sulphur, not over .05. No. 2 soft southern iron equivalent to No. 2 foundry of same silicon content.

"Differentials from the above base price for No. 2 foundry iron to be made for the following changes in specifications:—

"Forge or mill iron, $1 per gross ton under base.

"Foundry iron running silicon $1 to $1.75, .50 per gross ton under base.

"Foundry iron running silicon $2.25 to $2.75, .50 per gross ton over base.

"Foundry iron running silicon $2.75 to $3.25, $1.50 per gross ton over base.

"Foundry iron in excess of $3.25 silicon and $1 per gross ton for each ½ per cent. of silicon over the price for $3.25 silicon iron.

"Manganese, sulphur and phosphorus variations to be adjusted as formerly customary in each district, having respect to the base price.

"Where iron is sold by fracture the usual grading prevailing in each district to continue.

"Malleable iron, .50 per gross ton above base.

"Bessemer iron, 10 per cent. per gross ton above base.

"Basic iron, base price.

"Charcoal iron — Southern or warm blast charcoal iron, a maximum of $10 per gross ton above base for iron ranging .40 to .60 phosphorus, and silicon $1 to $2.

"For grades running below these analyses corresponding reductions as usual to the trade to be made.

"Cold blast charcoal iron a maximum of $22 per gross ton above base, with customary reductions for lower grades, as recognized by the trade.

"Lake Superior iron $2.50 per gross ton above base for iron averaging $1.25 silicon. Other grades to be adjusted as per the custom of the trade, depending upon the silicon, phosphorus and manganese contents of the iron.

"All of these charcoal iron differentials to be considered in connection with the base price.

"High silicon or silvery iron—For iron containing 6 per cent. silicon, $7 per gross ton above base; 7 per cent. silicon, $9 per gross ton above base; 8 per cent. silicon, $11.50 per gross ton above base; 9 per cent. silicon, $14 per gross ton above base; 10 per cent. silicon, $17 per gross ton above base.

"Three dollars per gross ton advance for each 1 per cent. silicon for 11 per cent. and over.

"Bessemer ferro-silicon—For iron containing 10 per cent. silicon, $22 per gross ton above base; 11 per cent. silicon, $25.30 per gross ton above base; 12 per cent. silicon, $28.60 per gross ton above base.

"Low phosphorus iron—Iron containing phosphorus and sulphur not exceeding .04 and silicon not exceeding 2 per cent. For copper bearing iron, $17 per gross ton above base; for copper free iron, $20 per gross ton above base.

"A sliding scale of $1.50 per gross ton advance for each reduction in phosphorus of .005 per cent. below .04, and $1.75 per gross ton for each 1 per cent. of silicon in excess of 2 per cent."

ON PROHIBITED LIST

The British Government has prohibited the exportation of the following articles, effective October 18:—Coir fibre, fish hooks, goatskins and sheepskins, animal hair, lead, farming machinery, hosiery, needles, seal oil, wool and manufactures thereof.

Many Businesses Wrecked by Details

Meeting To-day's Competition—Frank Stockdale, Merchandising Authority, Tells of the Problems of the Retailer and of the Dangers From Without and Within His Business That Face Him—The All-importance of Management.

Editor's Note.—Frank Stockdale, Advisory Councillor of the United Advertising Clubs, and one of the foremost authorities on Retail Merchandising Problems, delivered a series of four lectures last week in Toronto which establish a new angle to many perplexing problems confronting retail merchants generally. The basis of Mr. Stockdale's talks was secured in normal times and under normal conditions. Unusual conditions such as now exist require unusual remedies but if the fundamentals are sound, the adjustments to meet war conditions can be more easily effected.

The first of these lectures with the general title of "How to Meet To-day's Competition" is reproduced herewith. Some of the points raised are of vital import to merchants at all times and even more so under the trying conditions at present existing.

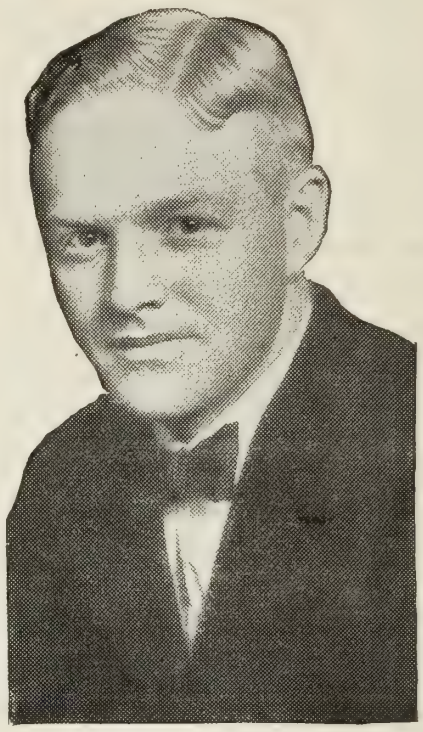
"ONE of the earliest and most important problems with which we are faced" stated Mr. Stockdale "is a problem that is known as 'rising costs,' that is, the increased expense of conducting retail business as compared with conducting a business ten, fifteen, or twenty years ago." He stated that an investigation of 1,560 stores revealed the fact that the expense of conducting retail business had in the course of twenty years increased until now it was approximately double.

"In the last three or four years I don't know exactly where they have gone, but I know where they are going. Everyone knows what is happening now in the retail business and what is going to happen as long as conditions exist as they are. While the expenses of conducting retail business have doubled, I have yet to find one retailer who has been in business over a period that long, who has been able to increase his gross profit. If the expense of doing business twenty years ago was 12 per cent., today it is approximately 24 per cent. If the gross margin twenty years ago was 31 per cent., the man who could run his business on 12 per cent. had a net profit of 19 per cent. The same man to-day would have a gross profit of only 7 per cent. and in some cases the variation is wider. Some cases to-day there are in which only 3 per cent. profit is made where years ago it was 17 per cent. or 18 per cent. The net profit was six times as large 20 years ago as it is to-day.

"This is one of the fundamental points, and it has to be excavated carefully if the retailer hopes for success, consciously or unconsciously.

Cost of Doing Business Dependent on Cost of Living

"Do you realize that costs are rising more rapidly now than they have in the past?" said Mr. Stockdale, who stated as the reason that the cost of conducting a business in a retail store is parallel or based upon the cost of living.



FRANK STOCKDALE,
The Noted Retail Merchandising Expert.

"Whenever the cost of living goes up, the expenses of conducting a retail store go up, just as sure as night and day follow each other," added Mr. Stockdale.

Another fundamental principle was the evolution in the kind of stores, which Mr. Stockdale enumerated as follows:

(1) *The crossroads general store which is vanishing rapidly with the advent of automobiles, parcel post and good roads movements.*

(2) *Specialty stores such as hardware, grocery, etc.*

(3) *Department store (collection of specialty stores).*

(4) *Mail order house.*

(5) *Chain store.*

Management the Great Item

"The stores that exist to-day and are making headway are stores that are managed," said Mr. Stockdale, "and their progress is the result of the brain work which is being put into them.

"People in department and chain stores and the men at the head are more alive for information and experience than is the man in the specialty store who manages the whole business himself. Men who run department stores recognize that management is the great thing, and they also recognize that the problem in the department store is to manage managers and to make good managers of the managers who are managed.

"To-day we are face to face with the problem of management. The thing that is holding the margin of profit down is the management of stores. My experience has taught me that management is the most acute of retail problems. A knowledge of how to sell, how to control, how to run a store in general, is the reason for the success and the growth of the various kinds of stores."

Mr. Stockdale pointed out that owing to abnormal circumstances an investigation of business should not be made on present conditions, but should be based on conditions which existed some time back. "If such an investigation is made" said Mr. Stockdale "you will get a clear vision that management is the real big factor in the market."

Three Types of Managers

Outlining three distinctive types of managers, Mr. Stockdale classed them as follows:

The fearful manager, who is fearful that the man he is directing will not do the job right, and who, therefore, loads himself down with details. This kind of manager, he said, could not delegate authority and did not usually get very far. The second type was the domineering manager who, he said, was not wanted where brain power was required, though he was all right where he supervised men who worked with their muscles. The third type, and the one who is getting the farthest, was the expectant manager, who sets a standard and lets others know that he is expecting them to come up to it, reward being on the basis of their attainments.

Mr. Stockdale added that the man who gave him the outline of the latter type of manager was a man who spent over one million dollars annually in advertising.

Referring to the pioneer method of laying roads along the calf paths through new country, Mr. Stockdale reminded the audience that to-day we have progressed beyond the calf path stage and had come to the scientifically laid roadway. This was true also in retail merchandising, we had developed beyond the calf path stage.

"We must remember this" said Mr. Stockdale, "that we must eventually come to the civil engineer stage, that the problems of retail merchandising must be figured out with the precision of an engineer's pencil and the sooner we recognize this the better we will be off.

"Many retail merchants are of the 'fearful manager' type, and get lost in the details of their business. The same thing applies to managers in department and chain stores. They forget to look at things in the right aspect. They lose sight of profits and when they do that their chance of success is lost."

Mr. Stockdale aptly illustrated his point with a story to the effect that a

travelling salesman who had been calling upon a certain merchant for fifteen years stopped one day on entering the store and asked the merchant, standing with broom in hand, what he was doing at the same time fifteen years previous. The reminder that he had been doing the same operation for so many years brought a much needed awakening.

The Unwisdom of Doing the Work That Others Can Do As Well

"The same principle applies to all branches of business" said Mr. Stockdale. "Whenever you can hire a man to do a thing cheaper than you can do it yourself, and don't do it you are missing an opportunity for growth. There is no rule to allow a man to-day to do $12 a week work and reap $25 a week returns. It does not work out that way in this world.

"There is another thing every man in business must recognize. Unless he can delegate authority in these days of competition, he cannot hope to maintain his end of the competition struggle.

Driving home his point Mr. Stockdale bluntly put the question to the audience: "Are you the fireman or are you the engineer, the man who watches the signals or are you the man who shovels in the fuel and lets someone else do the directing?"

"Two things we must do in order to make our profits in spite of rising cost, in order to make our profits with the net profit so small, and one of the reasons why we must give so close attention is exemplified in the bigger stores. I know stores whose cost of doing business is 27 per cent. The net marking which is the gross profit is approximately 30 per cent. That store is making 3 per cent. net profit. In the old days there was 17 or 18 cents profit—the merchant could lose 6 cents and still have 12 cents, but what happens if the merchant to-day lost 6 cents? His 3 cents is on the other side of the ledger and it is whenever profits get small that we have to figure closely.

The Dangers of Waste and Lost Motion

"Two main things to look after are waste and lost motion. Waste which does not consist of any motion at all is the thing in business to-day. Waste in stores to-day is in the clerks that are doing nothing and that is small to the waste that is in the merchandise that is doing nothing. It is an easier problem to get the maximum efficiency from merchandise than from the clerk.

"The average merchandise stays on the shelf six months in the United States," said Mr. Stockdale, "which means two turns a year, taking stores of all sizes and kinds, and there we have one of the big and vital problems in merchandising.

"When net profits get down to 3 per cent., and lots of specialty stores run on 3 per cent., we are up against the real proposition in handling figures. The vital question is 'What is the profit on merchandising?' If I know where my profits are, I know where to put my efforts, and I know where my losses are. If I know how to compute my profit on an article, I know how to conduct that business. I know enough about that business to conduct it profitably. I can put my finger on the sore spots."

In conclusion, Mr. Stockdale pointed out that the foundation of all retail business is a knowledge of profits.

Linking up the main points of his line of argument as to how the retail merchant can meet competition to-day, Mr. Stockdale stated that the first thing laid down is that "we must get down past the stage of theories and work on principles. In the second place, the rising cost of doing business is complicated and made so intricate that we must give special attention to figures. In the face of to-day's competition we must recognize that management, real management that studies all phases of retail distribution, must have more of our time, no matter what size store we are running. We must get down to these two principles, i.e., to eliminate all waste in goods and help, and get away from guesswork and have absolute knowledge."

The discussion which followed the lecture brought forth many interesting questions, which were treated in a very satisfactory manner by Mr. Stockdale.

Answering a question in regard to the retailers' influence upon the "high cost of living," Mr. Stockdale replied that the retail merchant was least to blame for the high cost of living of any person in the world.

A merchant who had a competitor selling the same line of goods cheaper than he could afford to mark them, queried Mr. Stockdale as to the best procedure in such a case, which was evidently due to a lack of knowledge of the cost of doing business. The reply was that "if the competition was so great that I could not make any profit I would decide that I should be in some other business. Competition based on ignorance is the hardest to meet," added Mr. Stockdale, "and the merchants who are making the real success do not allow any person to set prices for them."

Mr. Stockdale set grocers as a class by themselves owing to the fact that so many entered the business with small capital and many left it in short time. On the other hand, he stated that some of the keenest merchants are retail grocers, but added that he did not know how to cure the merchant who is not aware of where his business stands. "This practice," said Mr. Stockdale, "is bad for himself and his competitors, and is bad for his customers, too, in the end."

A merchant in the audience, who had had previous experience with the same difficulty, made answer that in one case a number of merchants troubled with such a competitor paid him a personal visit and showed him the mistake he was making in selling at such a figure that it was plainly evident he lacked a knowledge of the cost of running his business.

"What in your opinion is the chief cause for failure among retail merchants?" was next asked.

Mr. Stockdale laid emphasis on management in making his reply. "The greatest source of failure to keep books, to know about the business, to look after the buying and the market, is because a man tries to look after too many small details." Mr. Stockdale added that only one thing was worse than the failure of a man to have at hand figure facts about his business, and that was to have figure facts that were not truthful.

In replying to a question re cutting prices on advertised and non-advertised lines, Mr. Stockdale stated that "the man who cut prices on advertised lines is usually a pretty wide-awake merchant."

"How about the man starting in business who has not reached the stage where he can live on 3 per cent. net profit?" was asked.

Mr. Stockdale's reply was that 50 per cent. of the retail merchants in the country were getting along without any net profit, their salary being included before a net profit is struck.

Mr. Stockdale was, in conclusion, asked to define profit. His answer was that profit "is the reward a merchant gets for doing an exceedingly difficult job a little better than the other fellow can do it."

"ADVERTISING ALWAYS PAYS"

(Continued from page 26.)

vertising is well brought out in the accompanying illustration of a number of advertisements. The "Dollar Day" sale and other fall and cold weather advertisements are included in the layout. Requirements for the "autumn hunt," "fall stumping," "Christmas overseas boxes," etc., are all given much publicity, while kitchenware for replenishing the kitchen outfit for winter, lamps and lanterns for dark evenings, storm doors and windows, heaters, roofing, glass, stoves and winter automobile accessories are all given their place.

Retail merchants of to-day are beyond the stage where the value of newspaper advertising is questioned, but in order to get the best results from the outlay for this expense it is necessary that the great element of "seasonableness" or "timeliness" be taken into consideration when the ads are being written; and that the other salient features of everyday experiences, as outlined in the foregoing, be incorporated in all forms of newspaper publicity.

U. S. AUTO MAKERS APPEAL

American automobile firms have asked the border chamber of commerce to petition against the collection of Canadian customs on the increase of 3 per cent. on the price of all cars on account of the special war tax imposed by the United States government on every car manufactured in that country.

The American firms claim that since the three per cent. increase includes the American war tax that the Canadian custom charges of 35 and 7½ per cent. ought to be charged on the former prices of the cars. The chamber of commerce will consider the communication at its next meeting.

EDITORIAL COMMENT

EDITORIAL BRIEFS

REMEMBER the date—November 12.

* * *

THE money invested in Canada's Victory Loan will be spent in Canada.

* * *

RECIPROCITY?—What better form exists than lending your money to your country, getting interest on your investment and having the money loaned spent in Canada?

* * *

THE financial stability of the whole world rests upon the cause of the Allies. Is it not, therefore, good business to strengthen that cause financially in order to uphold our institutions? Buy Victory Loan bonds —therein lies the "bit" that you can do now.

* * *

THE first of the Stockdale lectures on Retail Merchandising appears in the current issue. There were many points of value to merchants generally brought out at these talks. Succeeding issues of HARDWARE AND METAL will contain full reports of the other three lectures.

* * *

INVESTING the money you collect from those old accounts results in three-fold benefits. The customer who has put you off so long becomes your friend once more, you get splendid interest on your investment, and the money you invest will be spent in Canada, which means that you will again cash in on your share.

WHAT OF OUR BANKS?

INQUIRIES made have elicited the information that our banks are "tightening up" and to an extent which is detrimental to the business of the country. It is true that they have to provide for the new war loan and also for the advancement of money for moving the crops, but should the retailer who has depended on the bank to see him through be forced out of business?

If the banks cannot provide for all the calls to be made on them, would it not be advisable for the Dominion Government to grant them permission to increase their circulation for the time being, bringing it back to normal gradually?

One man whose assets exceeded his liabilities by $12,000 was forced by his bank to make an assignment, paying 100 cents on the dollar. Would this not seem to indicate that our banking system is really a system of brokerage and not real banking for the good of the country? Is it true that banks do not train their help to fill the positions at the head, but bring in brokers to conduct their business? Are the banks making big money and assisting the big moneyed concerns while the many small concerns are forced out of business?

The banks are tightening up very noticeably, but the small concerns should not be forced to close their doors. This will disrupt the business stability of the country to a degree that would bring very disastrous results. It is to be hoped government action will be taken to overcome the serious situation now developing.

"GETTING DEALER CO-OPERATION"

"BUSINESS can flow no faster than the narrowest part of the channel permits. If the outlet for a product is clogged at the dealer's store the tide of sales is effectually checked."—(Taken from advertisement in *Printer's Ink,* by Mallory, Mitchell & Faust.)

This is an encouraging sign of the times. Not so long ago all agencies handling so-called national accounts affected to despise the humble distributor of merchandise, and pinned their faith and the advertisers' money to spreads designed to "force" the stocking of the advertised goods by the cowed and subservient merchant. Verily, "the world do move."

CANADA APPEALS TO YOU

THROUGHOUT the length and breadth of this fair Canada of ours, the appeal goes forth on November 12 for subscriptions to Canada's Victory Loan. Many and varied have been the calls made on the generosity of our citizens, nearly all possessing to a greater or less degree real merit. The call now being made contains a message to each and every citizen which the future of our country demands must be read and answered—not from the standpoint of generosity, but from the standard of good business.

The position Canada holds in the eyes of the world is an enviable one for a nation so young. Our accomplishments have been many and all attained without any great bluster or flurry. Canada is making further demands now in her Victory Loan—will she fail in this hour of her national honor? Our pride says, NO!

The development of our agricultural resources rests in our ability to market the products raised on

our farms. To market our surplus farm produce, we must extend credit to our Allies and pay our farmers. This can only be done by subscribing liberally to Canada's Victory Loan. Will Canadians fail her farmers—the backbone of the nation's wealth? Again we say, NO!

The continuation of our manufacturing establishments as factors in making munitions, in turning out ships, in supplying food to our Allies, rests on our supplying the necessary capital to pay the manufacturers for their output. Will we let our machinery stand idle—will we permit the cry of unemployment to ring through our land when our Allies' need is so great? Never!

And more than all these, will we let the appeal of the boys who are now on the battlefields of Europe go unheeded? Do not those who are sacrificing more than money can ever buy deserve every cent of backing which we can give them? Are we going to fail those boys who have made Canada's name one to be feared by the terrible Hun—who have made Canada's name respected by the nations of the world? Our answer must be emphatically, NO!

On November 12 you will have an opportunity to prove yourself worthy of the sacrifices our boys have made. The government will ask the people—and you, as one of the people—to lend Canada sufficient money to back up the efforts of these brave men. Canada must not and will not fail.

STRONGER TONE IN LEAD MARKET

THE bottom seems to have been reached in the lead market; as a matter of fact the leading producer has put into effect an advance of ½ cent over last week's 5½ cent New York price. The advance in price is believed to signify that the Government has made arrangements with the producers for their November-December requirements, although nothing definite has been given out as yet.

With the government order taken care of and independent concerns quoting 6 cents or higher, it was to be expected that the largest producer would get this extra ½c per pound. The trade from consumer to producer is taking an interest in the market again and inquiries are numerous from all directions.

It would seem that very few orders were placed at the 5½ cent basis. The volume of inquiry prompted the independent producer to uphold prices and sales were effected at a considerable advance. It is expected the demand from Canada will improve and altogether the situation shows more strength than for some time past, as the largest producer can't or won't supply the demand at the prices which they established.

During the last two months declines have been the order of the day in the lead market, the 5½ cent price established last week being just half that ruling on August 29. This would indicate that the situation has been thoroughly bad, but the advance of ½ cent and the stronger tone in evidence this week may mean that a satisfactory adjustment has been reached among producers. Present indications point to the market holding firm, with some advances likely to be recorded.

THOSE OLD ACCOUNTS AND THE VICTORY LOAN

THOSE old accounts, those accounts which you have kept in the background as ones which you will collect some day, should be collected now. The prosperity of the country is such that every man has benefited and there is no reason why you should be the banker for those whose apparent intention is just to put off paying as long as they can. There's a patriotic reason why these should be collected now—invest the proceeds in war bonds. Canada's Victory Loan demands every dollar it is possible to subscribe. The security could not be improved upon.

CASHING IN ON PERSONALITY

ONE huge handicap under which the mail order houses work is due to the lack of personality. The heads of these concerns may secure honors—may keep their names and their pictures to the fore, where they may be seen of men and women. But these men can not be personally known to their customers in any such way as may the merchant in a town or city.

Here then is the merchant's opportunity. He may cash in on personality.

This is being done in many ways. Some merchants make a point of meeting every one, of going everywhere. One, gifted with Irish wit, is frequently called upon to act as chairman at entertainments. He is a genial soul who loves such affairs and would probably attend many irrespective of the business advantage, but the point is that profit does come. People all over get to know this man—to think of him as a friend—to turn naturally toward his store when in need of such goods as he supplies.

Another merchant, of a different temperament, has secured a wonderful connection, especially with the farm trade—by quietly going about seeing that every one is getting satisfaction; by taking up personally little matters about which the customer inquires. This is not the class of man whom people just naturally address by his first name. But he is a man of the greatest integrity, and he has quietly made his character stand him in good stead as a business asset.

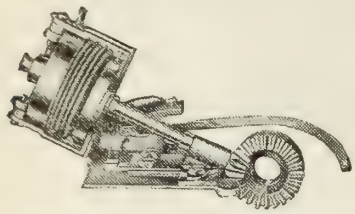
Personality is the scourge to make the mail order house wince. It should be employed continually, but naturally—each merchant using *his* personality, not trying to adopt that of another. Traveling under false colors tends to make one ridiculous, but for each in his own way to make the customer feel that his affairs are of interest to the merchant is sure to build for present and future profit.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

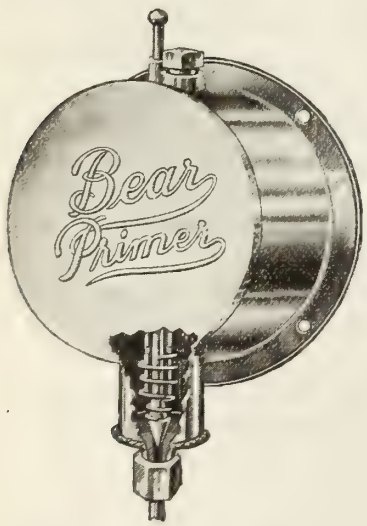
"BEAR" STARTER AND PRIMER

Bear Mfg. Co., Rock Island, Ill., are marketing an engine starter for Ford cars which is claimed to be the only mechanical starter that spins the motor. The starter works on a handle from the



"Bear" starter for Ford cars.

dashboard and a choker is provided to choke the carburetor. The starter is under the hood and out of sight, but is not connected with the motor. One pull on the handle is said to turn the crank a complete revolution past two compressions and two ignition points and to start the motor without further attention. The advantage of this starter is claimed to be that the crank can remain attached for operation by hand at any time without interfering with the starter, and also that it does not interfere with the fan belt or commutator. The feature of the Bear starter is said to be the three-to-one gear which is driven by a tapered drum. This drum revolves three times with each operation, giving both leverage and speed. There are said to be no corners or pulleys to work around and therefore the pulling is easy.



"Bear" Primer for all gas engines.

"Bear" Engine Primer

This company is also marketing the "Bear" primer for attachment to any auto or gasoline engine. It is said to be the only self-measuring primer and is claimed to give correct charge every time; carries gas to both ends of manifold direct to intake ports; no pumping, it works by gravity; and the only primer that cannot leak. There are no pumps or intricate parts to the "Bear" primer and it is therefore claimed that there is nothing to get out of order and nothing to wear. The primer is said to last as long as the car, and to save much fuel expense.

Other lines made by this company include Ford running-board and fender supports, which are claimed to make the frame of the boards as strong and rigid as the frame of the car itself.

A Ford crank release also manufactured by this company is said to avoid dangers of cranking when the engine backfires.

HODELL FLAT LINK CHAIN

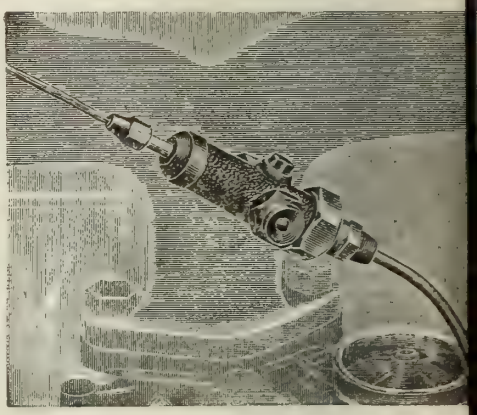
The Cleveland Galvanizing Works Co., Cleveland, Ohio, are introducing the Hodell flat link chain which is claimed to represent a real advancement in the chain industry. In general appearance

"Hodell" Flat Link Chain.

the chain is very similar to other types of flat link chains, but a detailed examination shows many points of difference. The Hodell chain being of flattened wire is claimed to substitute smooth rounded edges and contacts for the sharp, slightragged, square sides and contacts of the cut chain. The grain is also said to run with the strain instead of across it as in the cut chain and this is claimed to make for more even bending as well as greater strength. At the loop end the links are almost identical in appearance, but at the eye the Hodell link shows three wires, the two ends coming on the inside and being laid together to form double width contact, the ends lapping so as to prevent the loop of the next link from slipping back and wedging. The lapping and placing of the ends is claimed to be such that they brace the loop and reinforce it against flattening under strain. The Hodell chain is therefore claimed to be smoother and more flexible in practical handling and also less inclined to kink or buckle. Absence of strength under strain is claimed for the Hodell chain as compared with ordinary die-cut chains, and the former type is also said to stand much longer wear owing to the smooth action of the chain which has been compared to that of a roller bearing.

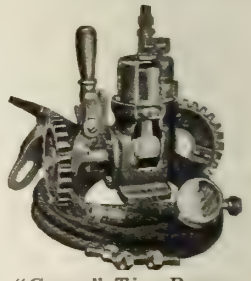
ENGINE PRIMER AND "CRANE" TIRE PUMP

Bay State Pump Company, 100 Purchase St., Boston, Mass., are marketing the "Copley" Primer which is claimed to



"Copley" Engine Primer.

be the only Primer using the carbureter principle of high velocity air to break up the gasoline into thoroughly atomized explosive priming charge and using the suction of the engine to draw the charge. It is also claimed to be the only Primer having no gasoline pipe to the dash and therefore leaky connections are largely eliminated. The Copley Primer is attached to the intake pipe of the engine and is connected with the gasoline line back of the carburetor. The priming valve is opened by a pull knob on the dash and closes itself automatically when the dash pull is released. The device is said to have been designed to meet the big demand for a dependable



"Crane" Tire Pump.

method of instantaneously starting cold motors and to end the drain on batteries and back-breaking toil in cranking the engine by hand.

Aluminum Cheaper Now by 25% Than at High Point of War

Ingot Aluminum Has Advanced Over 100 Per Cent. as Compared with Pre-War Prices, While Aluminum Ware Has Advanced Approximately 20 Per Cent.—Amount For Ware is Restricted

INGOT aluminum is now selling at 60c per pound, while the highest point reached during the war was 80c per pound. This is a reduction of 25 per cent. The normal price of aluminum is in the neighborhood of 25c per pound. About six months ago there was a turn in the tide of aluminum affairs owing to the better supplies that were being turned out by the producers in the United States. Heavy supplies were accumulated in that country and owing to the operation of the embargo which prevented the exportation of the metal except where it was to be used for war purposes the domestic trade in Canada has not been able to get all supplies that it would otherwise require. All aluminum sheets are now brought into Canada from the United States for use in aeroplane manufacture where formerly they came from Scotland. There has been a restriction of the amount obtainable for aluminum ware due to use for war purposes. Aluminum ware has not advanced in the same proportion that the ingot metal has advanced. For instance the advance on ingot metal on the basis of to-day's prices has been over 100 per cent. while manufacturers state the advance on aluminum ware has been in the neighborhood of 15 to 20 per cent. over pre-war prices.

Exchanging Scrap for Sheets

While there is an embargo on the use of sheets for uses other than war purposes there is a way by which producers of aluminum ware in Canada have been able to get supplies, namely, in the exchange of scrap aluminum to the rolling mills for the finished sheets. Aluminum secured in this way can be used in ware. The situation at the present time, however, is not promising so far as supplies for aluminum ware are concerned as the amount available for this purpose is greatly restricted. Governments of both the United States and Great Britain are bending all their energies toward getting sufficient supplies for war purposes. The British Aluminum Company, having no less than five large plants for the production of aluminum, and which formerly shipped large quantities into this market, have not been shipping to Canada since the war started. This company has the parent plant at Kinlochleven in Scotland, another at Fryers in Scotland, two in Norway and one in Switzerland. Since the outbreak of war the output of these plants has been taken by the Government. In the United States the Aluminum Company of America is the big producer of the metal which comes from the States of Arkansas, Alabama and other parts of the South. This ore is shipped to St. Louis where it is refined and shipped to various rolling mills throughout the country. One of these plants is located at Niagara Falls and another at Messina. The Northern Aluminum Company is the Canadian producing company with rolling mills at Shawinigan Falls, Quebec. The branch of the British Aluminum Company is still operated in Canada, but they now obtain their supplies from United States sources to replenish their stocks, as supplies no longer come forward from the mills in Scotland.

Aluminum Tube Not Being Produced

One of the lines that is not being produced by mills at the present time is tubing. Tubing is made by the extrusion method under hydraulic pressure of which there are perhaps not more than fifty machines on this continent. These machines are now being used in the production of brass and copper bars and shapes. Aluminum tubing was formerly used extensively in tanneries where certain chemicals have a corroding effect on other metals. It is also used in pipe organs and water heaters, together with other uses. Aluminum is approximately one-third the weight of copper and as such is considered one of the cheapest non-ferrous metals. Copper for instance is quoted at the present time at 32c per pound while aluminum is quoted at 60c per pound. When the difference in weight is taken into consideration it will be seen that copper would cost at the rate of 96c per pound of aluminum.

Prices on Aluminum Products

The market on aluminum metals is holding steady at the present time and dealers do not anticipate that much easier prices will prevail as long as the present heavy war demand keeps up. Prices quoted on the various lines of aluminum products are as follows:

Ingot aluminum	$0.80
Sheets, up to 36 in. wide	0.80
Pyramid and fluted matting	0.80
Aluminum wire, base No. 20 to 3/16 in.	0.90
Rivets, ⅛ in. to ¼ in. diameter	1.50
Tubing (to extent of stock)	1.00
Half oval bars	0.75

Shortest Working Season in History of Glass Industry

Estimated Will Not be More Than 40 Per Cent. of Normal Production—Manufacturers Assert Prices Will Have to go Higher—Canadian Glass Man's Opinion.

INTIMATIONS recently made in HARDWARE AND METAL anent firm situation that exists in the glass market are further borne out in an interview with J. W. Hobbs, managing director of the Consolidated Plate Glass Company of Toronto. Mr. Hobbs has recently returned from an extensive trip through the glass producing sections of the United States. He was therefore in a position to gain some first-hand information respecting the glass industry. In substance he asserts that the production of glass will be greatly curtailed and that prices are almost sure to go higher. Asked about the situation by HARDWARE AND METAL, he said:

"The window glass manufacturers of the United States are not very hopeful of a coming successful season. Five years ago, most of the manufacturers depended upon natural gas; to-day, about 50% are using producer gas. The West Virginia gas fields are the last to show signs of exhaustion. In the winter of 1916 and 1917, many of the manufacturers there were obliged to cease operations entirely, owing to lessened gas pressure. Slightly less than half of the window glass made in the United States is manufactured by hand; in normal times the makers put in blast in October, following the wage scale adjustment, usually made in August. Up to November 1 of this year, there had been no wage scale settlement, the manufacturers and men failing to come to an agreement.

"It takes about a month to start blowing glass after the furnaces are lighted and these may not have been lighted yet. There will be no hand made glass before January, 1918, and by reason of climatic conditions the work must cease about the first of May, so the working season will be the shortest in the history of the industry.

"Most of the machine plants use wholly, or in part, producer gas. With the shortage of coal and the shortage of cars for supplies, it is estimated that there will not be more than 40 per cent. normal production.

"There is not sufficient coal mined to supply the demand and certain users such as the railways, public utilities, domestic users and munition manufacturers, must receive the preference. Other manufacturers will be dealt with in accordance with the importance of the industry toward the one great object—war. This means that the glass industry is far down on the list.

"The retail hardwareman, looking at to-day's cost, and recalling prices of a few years back, about one third less, is inclined to think that window glass has reached its last advance. Such, however, is not the case.

(Continued on page 47.)

EVENTS IN THE TRADE

BUSINESS CHANGES

Fort William, Ont.—Gerry Bros., hardware, have been succeeded by Ira N. Gerry.

Hamilton, Ont.—P. Cheeseman, manufacturers of brick and hardware, have sold hardware business.

Carsland, Alta. — Duncan Trading Company has been succeeded by G. H. Hill, hardware and groceries.

TRADE NOTES

Montreal, Que.—Mrs. J. R. A. Boulais has been registered for J. R. Boulais hardware.

Montreal, Que.—W. C. Wall and A. F. Wall have been registered for Wall Bros., hardware, paints, etc.

OBITUARY

Montreal, Que.—J. C. Jones, hardware merchant, is dead.

Toronto, Ont.—W. R. Brock, Hon. President and Chairman of Canadian General Electric Co., is dead.

Wingham, Ont.—G. Lavis for thirty-five years agent for Massey-Harris Company in Clinton, Ont., is dead.

London, Eng.—George T. Holloway, eminent metallurgist and British nominee on the Royal Ontario Nickel Commission, is dead. Mr. Holloway was head of the firm of George T. Holloway & Co., London, Eng., and was regarded as a high metal authority.

Horace S. Wilcocks, vice-president and managing director of the North American Chemical Co., and director of the Decalcomania Co. of Canada, died suddenly at his home, 34 Nina Avenue, Toronto, last week. Mr. Wilcocks was born at Kingsey, Que., in 1862.

FIRE LOSS

Chatham, Ont.—Fire recently damaged the plant of the Gray-Dort Motor Company.

Toronto, Ont.—Fire believed to have been caused by spontaneous combustion early Saturday morning destroyed the forging plant of the Cluff Brothers Ammunition Co., of 28 Atlantic Avenue. The loss is placed at $200,000, all of which is covered by insurance. After the fire R. J. Cluff intimated that the plant would be rebuilt as soon as possible.

PERSONAL

J. D. H. Browne, hardware merchant of Sault Ste. Marie, was a recent visitor to Toronto.

B. B. Halladay, manager of the western Canada branch at Winnipeg of the Canada Cycle and Motor Company, has been appointed sales manager at Toronto.

W. J. Wilson, sales manager, Winnipeg Ceiling & Roofing Co., has returned from a trip throughout Western Canada.

Lloyd Harris, president of the Russell Motor Co., Toronto, has undertaken, at the request of the Imperial Munitions Board, the duty of representing the Board at Washington, D.C.

H. J. FULLER

President Canadian Fairbanks-Morse Co., who was one of those assisting in negotiations which will lead to the United States placing large munitions contracts with Canadian manufacturers.

H. J. Fuller of New York, president of the Canadian Fairbanks-Morse Co., has been appointed to represent the Imperial Munitions Board in New York in connection with munitions and marine equipment contracts.

MONTREAL NEWS

C. W. Veyfey, wholesale manager of the Hudson's Bay Company of Winnipeg, spent several days in Montreal, and while here made the Montreal offices his headquarters.

A. H. Jenkins, of the A. C. Leslie and Co. staff, Montreal, is at his desk again after a prolonged and severe attack of rheumatism and nervous trouble. His recovery, we regret to say, is only partial, but he is much improved in health.

ST. JOHN, N.B., NEWS

A. J. Everett and W. H. Atchinson, both former members of the staff of Emerson & Fisher, St. John, reached home this week, having been invalided on account of ill-health. Everett served at the front with the Princess Pats and Atchinson with the Fighting 26th.

Stanley E. Elkin, president and managing director of The Maritime Nail Co., St. John, is mentioned as the probable Liberal nominee on the Union government ticket in St. John, taking the place left vacant by the appointment of Hon. William Pugsley, M.P., as lieutenant-governor of the province.

Lieutenant-Colonel J. L. McAvity, president of McLean Holt Co., St. John, former commanding officer of the 26th Battalion, C.E.F., has been selected as the commanding officer of the New Brunswick depot for the training of men under the Military Service Act. He is now completing his preparations for the work.

Almost at the same time that Hon. F. B. Carvell, the new minister of public works, announced in St. John that the million dollar breakwater would not be built at present as the money is needed first for munitions, another announcement was made to the effect that McAvity's big munition plant would again operate on full time.

In addition to the new shipbuilding plants mentioned in these columns last week, the prospects for another on the New Brunswick coast have been announced. J. A. Gregory, of St. John, has practically agreed to take over the old shipyard site in St. George, Charlotte County, and commence operations there. He has extensive timber holdings in that section of the country.

INDUSTRIAL NOTES

Stratford, Ont.—Stratford Tire Vulcanizing & Welding Plant has dissolved.

Medicine Hat.—The Dominion Glass Co. has taken over the Alberta Bottle Works.

Winnipeg, Man.—Galt Art Metal Company, Ltd., sheet metal manufacturers, are closing here.

Hamilton, Ont.—Frost Wire Fence Company will erect a $25,000 addition to their present plant.

Essex, Ont.—Essex Tractor Company is planning additions to their plant to double the output of tractors.

Montreal, Que.—Duncan R. Campbell & Co., mail order house, has dissolved. A new firm has been formed under same style.

Welland.—The Canada Foundries & Forgings Co. have recently secured some important orders for marine forgings.

Victoria, B.C.—Consolidated Mining and Smelting Company of Trail have received an order from the Imperial Munitions Board for 6,000 tons of lead.

Dartmouth, N.S.—The Liquid Air Society, Montreal, have purchased a site on which they will erect an acetylene plant.

Sydney, N.S.—The Sydney Foundry & Machine Co., will build a foundry at Halifax, to cost $7,500. Wilfred Clarke is manager.

New Glasgow, N.S.—The Nova Scotia Steel & Coal Co. will make a number of extensions and improvements to their steel plant.

Vancouver.—The Pacific White Lead Co. of Montreal will build a plant on Industrial Island, B.C., for the manufacture of lead, paint, etc., to cost $50,000.

Watford, Ont.—The St. Andrews Wire Works of Canada, Ltd., has taken a building at Strathroy, Ont., which it will remodel and equip for the manufacture of wire products, etc. G. M. Haldane is local manager.

Hamilton, Ont.—The Dominion Foundries & Steel Co. has started operations at its new plate mill. In the meantime it is understood that the plates will be made from rejected shells. The mill will roll plates from ¼ inch to ¾ inch thick, 24 inches wide and any weight up to 500 pounds.

Toronto, Ont.—Judgment in favor of the Dominion Radiator Company of Toronto, against the Steel Company of Canada, of Hamilton, was recently delivered. The suit was for $27,995 damages for failure to deliver pig iron under two separate written contracts.

New York, N.Y.—The Bethlehem Steel Corporation has received orders from the United States Government for over 150 torpedo boats, to cost around $1,500,000 each. This would make the total value of the order approximately $225,000,000, which is the largest contract from the amount of money involved awarded by the Government since war was declared.

INCORPORATIONS

Vancouver, B.C.—The Wallace Foundry Co. of North Vancouver has been incorporated with a capital of $75,000.

Heating Specialty Co. has been incorporated by James Parrish, Samuel Egan and William A. Ross of Toronto to manufacture stoves, furnaces, gas, electric and steam heaters of all kinds at Toronto with a capital stock of $50,000.

COMMERCIAL TRAVELLERS ELECT OFFICERS

On. Nov. 3 the London, Ont., Commercial Travelers' Association elected their officers for ensuing year, all going in by acclamation. The retiring president was C. W. McGuire, London, Ont. The following will direct the affairs of the association during the coming year: President, J. H. Grant, London; first vice-pres., G. Morley Adams, London; second vice-pres., E. N. Hanna, London; third vice-pres., John Lennox, Hamilton. The directors elected are: F. E. Harley, A. E. Cowley, J. H. Laughton, R. W. Kingswood, A. W. Howe, W. B. Screaton, and A. E. Ferte, London; C. E. Secord, Brantford; Geo. W. Fulman, Chatham; R. B. Griffith, Hamilton; J. T. Grant, Kitchener; W. D. Martin, Stratford; Geo. T. Ayerst, St. Thomas; W. Lind, Toronto; N. E. Sherwood, Woodstock.

The Ontario Commercial Travellers' Association at present holds war bonds to the extent of $118,000, and it was decided to invest in the Victory Loan to the limit of available funds.

NEW GLASS WORKS

Consumers Glass Co. Will Be Operating Soon With 500 Workmen

Definite steps have been taken for the organization of a new glass industry in Canada, and it may be assumed that the men behind the Consumers Glass Company make it certain that a vigorous development will be carried on. F. P. Jones, president of the Canada Cement Company, has been chosen president of the glass company, and Henri Jones, a well known manufacturer of colorings in Montreal, will be vice-president. The capitalization is $1,000,000.

The new company has taken on a factory situated in Ville St. Pierre, a suburb of Montreal, with 700,000 square feet of property, and connection with the C.P.R., the Grand Trunk, and the Lachine Canal. It is expected that operations will commence about the first of the year, and that 500 men will be employed.

Speaking to HARDWARE AND METAL, Mr. Jones stated that the company considered that there was ample room for a new glass factory in Canada, as the existing one was unable to supply the demand and large quantities had to be imported. The original company was the Atlas Glass Works, Limited, but in 1914 the company was reorganized as the Premier Glass Works with an authorized capital of $3,000,000. Some time after the interests of this concern were secured by Mr. Jones, and he has organized the Consumers Glass Company.

The organization of this new works is an important indication of a tendency among industrial men in Canada to develop in this country the production of goods that will lessen our import requirements and hold the balance of trade on the positive side for the future.

LUNENBURG, N.S., MANUFACTURERS PROSPEROUS

The manufacture of internal combustion engines for the use of fishermen and also power winches for hoisting of sails and cargo and the heaving of anchors on schooners is being conducted in Lunenburg, N.S. This business has grown tremendously during the past year or two. Fishermen as a class have reaped a harvest from the sea this year. Catches were large and prices never so high as now. These are elements which have influenced sales of these engines to large proportions.

CATALOGUES and BOOKLETS

VEST POCKET INFORMATION

A little booklet, which contains a list of all the products manufactured by the E. I. du Pont de Nemours and associated companies, namely, Du Pont Chemical Works, Du Pont Fabrikoid Company, the Arlington Company, and Harrison's, Inc., has just been issued.

The booklet does not indicate who uses the products or how they are employed, but it will no doubt prove of interest as well as of value to many mercantile and industrial men. It is small enough to fit in a busy man's pocket.

NEW GAME TRAP CATALOG NOW BEING DISTRIBUTED

A new Game Trap Catalog illustrating and describing the complete line of traps manufactured by the Oneida Community is now being distributed among the trade in the Dominion.

The manufacturers intimate that this new book is in many ways far in advance of any literature they have previously published featuring their line. It is stated that the cover, which is a five color lithographic reproduction of a poster by L. N. Britton, can also be furnished in display card form for counter or show window use. The inside pages, in two colors, are so arranged as to permit quick reference to any style of trap manufactured by this company. Complete specifications of all Oneida Community Traps are given as well as actual size photographs of some styles and sizes.

COMMUNITY PLATE CATALOG

A new catalog featuring the various plates and patterns of silverware manufactured by the Oneida Community is now being distributed among the trade.

For the cover, the Community has chosen a Coles Phillips portrait of a charming girl, painted in full color from a living model. As it appears on the catalog lithographed in ten colors, it is a reduced reproduction of the new Community Plate window display. The window display itself measures 28 in. x 46 in. high and is printed in twelve colors and gold by a special process that insures exact color reproduction of the original painting.

The inside pages of the new catalog, thirty-two in all, illustrate and describe the various patterns and pieces of Community Plate, as well as those of Oneida Community Reliance Plate and Par Plate.

Of special interest are the full color reproductions of the store display trays, display cards, street car cards, window cards, folders and other dealer's aid material, together with three of the 275 newspaper electrotypes especially prepared for the Community dealer's use in his home newspapers.

THE CLERKS DEPARTMENT

BUYING ALL WAR SUPPLIES FOR UNCLE SAM'S FORCES

Frank A. Scott, Who Formerly Manufactured Machine Tools, is Now Directing the Manufacture of the Implements of War.

THE policy that President Wilson adopted, of bringing in men of proven ability in business. has resulted in gathering around the Administration at Washington a group of very able men to direct what might be termed the business end of the war. These men are organizing the nation, directing and developing American resources toward the purposes of war and laying plans for putting behind their armies when they take the field the whole weight of American wealth and strength. One of the outstanding men in this group is Frank A. Scott, chairman of the War Industries Board, and Theodore Tiller gives an interesting sketch of him in Munsev's Magazine:—

One day in the year 1885 a twelve-year-old boy, who had to leave school and make his own way in the world on account of his father's death, applied for a job in a railroad freight office in Cleveland, Ohio.

"I'm afraid you won't do," said the chief. "We need a boy, but you're not tall enough to reach the letter-press."

"Well, couldn't I stand on a box?" suggested the young seeker of employment.

That day a box was added to the equipment of the freight office and the name of Frank A. Scott to the pay-roll.

It was this same Frank A. Scott, advanced to be manager of an important company manufacturing machine tools and instruments of precision, whom Secretary Baker summoned to Washington shortly after the declaration of war with Germany. After an interview with the Secretary of War, Mr. Scott returned to Cleveland and wrote two letters to his business associates. One was an offer of his resignation; the other a request for an indefinite leave of absence.

The heads of the company preferred to grant the latter. Consequently Mr. Scott is in Washington on indefinite leave, and he is not likely to clean off his desk and start for home until the war is over. After serving for a time as head of the Munitions Board of the Council of National Defense, he has undertaken still larger responsibilities as chairman of the War Industries Board, the central purchasing agency of the government—a body that will have to spend a good many billions of the nation's money.

The general nature of Mr. Scott's work can best be explained, perhaps, by quoting a statement which he made shortly after he went to Washington, and in which he spoke very frankly of the difficulties confronting the government in organizing the national forces for war.

"The United States has the greatest prescription in the world to fill, and is about to take it to a corner apothecary shop," was the way in which he candidly summed up the situation.

Systematic organization of our industrial resources, standardization of purchasing methods, and co-operation among all government agencies—these were the three great objects for which he saw that it was necessary to work.

How to Organize For Victory in War.

"Men, metal, and machinery are the three 'M's' that go far toward national ability to wage modern war successfully," he said. "The United States is rich in all three. Can we make them available in the right time and in the right way? We can answer that question in only one way. We face the problem, and we must find the answer. We must analyze our task, co-ordinate our efforts, standardize our needs, economize in our methods, and then produce, produce, produce.

"Our three million square miles of territory contain the greatest aggregate natural wealth on the globe. Our hundred millions of people are the most resourceful and energetic of any equal number on earth. Our scientists, workmen, and executives need yield first place to none. To assure victory, these resources of men and material must now be welded together and directed into channels that will carry a ceaseless flow of fighting men and fighting material toward the battle-front.

"To-day, when we speak of munitions, we mean much more than guns and powder. The munitions of a modern army are the entire resources of the nation made available for its fighting men."

A man of infinite tact and extraordinary executive ability was needed at the head of the War Industries Board, and Washington believes that Mr. Scott will fill the bill. He has started off well, using thorough business experience and his knowledge of human nature, and taking a common-sense view of the difficulties, annoyances, and jealousies that inevitably arise when a great national emergency demands radical changes in governmental methods.

The Central Purchasing Agency.

The creation of the War Industries Board to a certain extent steps upon the toes of other purchasing agencies of the government; but it consolidates responsibility in the award of contracts, promises to still criticisms heard earlier in the war, and will soon demonstrate whether there is to be real system and co-ordination in the expenditure of the billions of dollars voted by Congress.

There have been published reports of rumblings of discontent in the peace-time purchasing departments of the army and navy; and there might easily have been justification for them had men of less ability been selected for the War Industries Board. Mr. Scott, since he was first appointed to the Munitions Board, has been winning over critical military men—men naturally inclined to believe the war should be conducted wholly by the army, and that civilians are poor managers of army business. Accustomed to dealing with men of all classes, he has been notably successful in keeping down friction, in co-ordinating the work of the Council of National Defense and the army bureaus, and in bridging the chasm between the military and civilian way of doing things and thinking about things.

It is no new story that the purchasing system of the United States government, through many years of peace, has been on far from an ideal footing. Departments using the same material have purchased through different agencies and at different prices. They have frequently bid against one another. This is what the late Senator Aldrich had in mind when he said that he could save the government three hundred million dollars a year by conducting its business as any good merchant would conduct his establishment.

When Secretary Baker called Mr. Scott to Washington, he knew that different officers of his department were out in the market bidding against one another for supplies. He knew that they were competing with official agents of the Navy Department, who had urgent instructions to get similar goods. The result, of course, was a colossal and utterly needless waste of the government's money.

The Shipping Board row, fortunately ended since then, furnished an interesting side-light upon conditions of that sort. For the emergency fleet, General Goethals was about to purchase steel at ninety-five dollars. He said haste was the main consideration. Secretary Daniels, of the navy, stated that he was buying steel at about two-thirds of the price which it was proposed to pay for the construction of the government's merchant fleet.

This illustrates the helplessness of a government if it does not quickly mobilize its resources and standardize its methods when war comes. The controversy over coal prices, with one official department declaring a certain rate reasonable and another department declaring it unreasonable, is but another instance of the necessity for the creation of a central and authoritative War Industries Board.

Not Strictly an Official Body.

It would be noted here that, strictly speaking, the status of the War Industries Board is to a certain extent unofficial. It has no authority in law to sign, seal, and deliver a contract without the final approval of a Cabinet officer. For example, the Secretary of War must sign the contracts for the purchase for his department, and must approve the expenditure of all appropriations voted for it. To all intents and purposes, nevertheless, the War Industries Board determines who shall get contracts, and at what prices.

The War Industries Board deals with

the selling public. It takes whatever steps it may deem necessary to promote production and to expand the business of supplying the munitions and materials of war. It finds the source of supply, negotiates options, and agrees upon prices for the big and little things needed by our armed forces. It prevents the government departments from bidding against one another, and makes effective a co-ordinated purchasing system—a system such as Frank Scott would use in his business in Cleveland, but which, until now, Uncle Sam has never undertaken.

Contracts approved by Chairman Scott and his board, and sent to the proper officials for routine signature, will be the real contracts in this great war; for when a contract gets Mr. Scott's "O.K.," the trade is practically closed.

"In the work of assisting the War and Navy Departments in securing munitions, the General Munitions Board, whose functions the new War Industries Board has taken over, has performed yeoman service in developing new sources of supply for gun-forgings and other essentials to the manufacture of artillery," says a statement issued by the Council of National Defense. "The efforts of the board have not been confined to guns and ammunition, however. Almost all kinds of supplies come under its jurisdiction, including carriages, timbers, caissons, forge-wagons, military vehicles, steel helmets, surgical supplies, optical glass, gages, tools, and dies of many kinds. Besides this, all kinds of questions as to price, priority of shipment, and methods of expediting production have been referred to the board for advice. The board has also served as a clearing-house for innumerable related problems coming both from the departments and from the council's committees on munitions, raw materials, and supplies."

Scott's Personality and Career.

Frank A. Scott is a broad-shouldered rather stockily built man, who has a way of looking other men straight in the eyes, speaking frankly on all subjects, and keeping his promises to the letter. He has an abundance of hair, which he parts near the middle, candid gray eyes, and an unassuming manner. He is a democratic fellow in a big place.

Scott is a man to whom his associates and subordinates find it easy to be loyal. He is always willing to give credit to some one else's suggestion, and to express appreciation of a good piece of work. He makes a systematic practice of delegating authority so as to stimulate the initiative of the men about him.

He was born in Cleveland forty-four years ago last March, and was attending the public schools there when, as has already been told, his father's death compelled him to go to work for a living. He kept up his studies at night, however, under John H. Dynes, of the Western Reserve University; and he has always been a great reader.

From the railroad freight office where his career began his upward progress was for a good many years steady but uneventful. With his remarkable memory and natural aptitude for figures he gained a thorough knowledge of the freight business, and when the Cleveland Chamber of Commerce created a committee on transportation, the position of assistant secretary and freight-rate expert was offered to him. He accepted, and though he was only twenty-two years old, he was speedily promoted to the more important post of secretary of the Chamber of Commerce.

Scott was now brought into almost daily contact with the leading men of the big city on Lake Erie. Three of them, in particular, watched the young secretary as he broadened. One was Colonel J. J. Sullivan, the millionaire Cleveland banker. He took a fancy to Scott, not only because he seemed to be a capable fellow, who would bear watching, but also, according to current report in Cleveland, because he didn't smoke cigarettes—a habit which Colonel Sullivan specially detested—didn't use profane language, and didn't develop an enlarged head as he rose in the world.

Colonel Sullivan—and some others, too—made note of the fact that Scott thought of things for the betterment of Cleveland and for the benefit of the Chamber of Commerce. They saw that he was a conscientious booster instead of a knocker, and that he had a talent for keeping the city and its great industries in the public eye.

So Colonel Sullivan engaged him as secretary and treasurer of the Superior Savings and Trust Company, with which institution he remained for three years. During that period he also served as receiver for the Municipal Traction Company. He had now set his foot firmly upon the threshold of the world of larger business, and it was merely a question of what upward step he would next take.

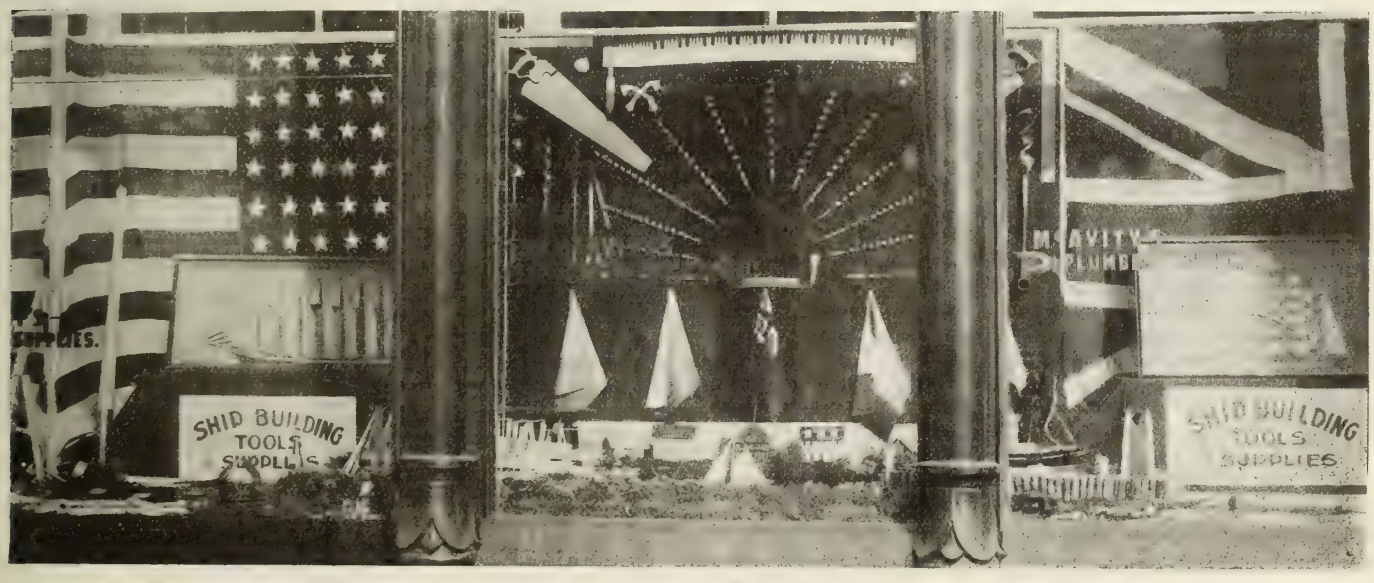
Among the men who had an eye on Scott's progress were Worcester R. Warner and Ambrose Swasey, heads of a corporation manufacturing machine-tools, telescopes, range-finders, and similar instruments. In 1909 they invited Scott to become secretary and treasurer of their company. He remained with them until he entered the service of Uncle Sam, having meanwhile become vice-president of the concern and general manager of its business. In this capacity he has traveled widely, has made contracts in all parts of the world, and has acquired a store of expert information that is of material aid in his present work.

A Student of Military History.

Another thing that has helped to equip Mr. Scott for his position is his remarkable knowledge of military history. The great wars of the past have always been his favorite study; and he has another kindred hobby—the collection of firearms of all dates and types. These interests of his have undoubtedly made it easier and pleasanter for him to work with army and navy officers, who necessarily have their part in the operations of the War Industries Board.

"He probably knows more about the Civil War than any man in this generation," a friend of Mr. Scott recently said. "He can name every corps commander in the Union army, east and west, at a given time. He has stored away accurate information regarding the movements of the armies, all the offensive and defensive campaigns, and the particular stroke that won or lost a battle. His study of the Spanish-American War has been just as painstaking. In fact, though he is not called a historian, I doubt if there is a man in the country to-day better informed on the military history and progress of this nation."

He is a veritable encyclopedia of such facts as this, for instance—that in the battle of Gettysburg Meade's army had three hundred and ten guns, which fired a total of approximately thirty-three thousand rounds during the three days of the fight. British officers with whom he talked the other day told him that three hundred and ten modern guns would fire an equal number of shells within a comparatively few minutes.



REVIVAL OF SHIPBUILDING

When the revival of wooden shipbuilding at the port of St. John became an accomplished fact T. McAvity & Sons, Limited, inserted the window display reproduced above. The details of the window are: A water filled tank banked by sandy shores gives the proper atmosphere for a shipbuilding yard and on the shore appears the framework of a ship under construction and another near completion, but still on the stocks. In the "Harbor" a sailing vessel is afloat and on the other side appears a vessel in a dry dock to undergo repairs. In the background is a model village of workingmen's homes. Surrounding this striking scene is a display of materials and tools required for shipbuilding and repairing.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

TWO developments of more than usual interest to the hardware trade during the week were the firmer trend to the lead market and the activity and higher prices in the tin market. These movements may have a far-reaching effect on commodities in which the hardware trade is interested. One of the lines to show an immediate response to the condition in the lead market was solder, in which considerable advances have been made. Lead traps and bends are lines which show a decline in price during the week, due to declines that had previously taken place in pig lead. Advances in manufactured hardware lines have been quite numerous and include game traps, oil heaters, shotguns and rifles, shoe thread, sidewalk scrapers, sleighs and auto coaster wagons, and woodenware, such as lard and candy pails. Booking prices on black wire cloth have been announced. There is a firm situation in other lines of woodenware, such as tubs. Further declines have been registered in black sheets and galvanized sheets as the result of announcement of fixed prices in the United States. Supplies of iron and steel available for domestic uses will, in all probability, be further restricted, due to the intention of the War Industries Board of the United States to restrict the use of steel in the manufacture of automobiles. Business in hardware lines is reported splendid, with considerable movement of goods to Northern and Western points which take advantage of water transportation before the close of navigation. This goes into effect usually about the middle of the present month.

MONTREAL MARKETS

MONTREAL, Nov. 7.—There are a few changes this week, among which are the following:—The list price on riveted scoops has advanced $1.50 per doz. and on the socket scoops there is an advance of $1 per doz. Tin plate is scarcer than ever. Heaters are in very active demand. Coal oil and gasoline are moving freely. The price on lead bends has been changed from 20 per cent. advance to 10 per cent. advance on list. Quotations on ingot tin are higher by 2c to 2½c per pound. Pig lead is firmer with an average advance of ¾c per pound. There are no changes in cotton rope but the market is very firm. Game traps have advanced here about 25 per cent. Shoe thread has also advanced about 25 per cent. and the supply is scarce.

Shelf Goods Unchanged; New List On Scoops

Montreal.

SHELF GOODS AND HEAVIES:—There are no new changes in shelf goods this week. Business has quieted down somewhat, although orders from the country are reasonably good. There has been an advance in the list on socket handled scoops of $1 per dozen, and on riveted of $1.50 with discounts unchanged. Some country dealers are having supplies for winter sent them before the close of navigation and this has somewhat stimulated business. Bookings for spring are reported good.

No Price Changes In Wire And Nails

Montreal.

NAILS AND WIRE.—The demand for wire nails is only fair with sorting business the feature. Some dealers are securing supplies that can be had by boat delivery before the season closes, and this is mostly to fill in sizes. Wire is very quiet and the prices this week are not subject to change. Wire nails are selling at $5.50 base, per keg. Cut nails are $5.75 per keg base. Smooth steel wire is $6.50 base per 100 pounds.

No Changes Are Made In Iron Pipe Or Tubes

Montreal.

IRON PIPE.—There is nothing of interest in the iron pipe market this week. Business is only of a sorting nature and orders are very small. It is doubtful if any great demand could be supplied as there are no heavy stocks in store.

No Changes Recorded In Iron And Steel

Montreal.

IRON AND STEEL.—The demand for iron and steel is just fair with a firm market obtaining. Country dealers are buying in only a very small way and there is a tendency to keep stocks as low as possible until spring. There is still difficulty in securing supplies, but the lesser demand from dealers has eased conditions somewhat. Markets are unchanged with the following quotations:—

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05
Sleigh shoe steel	5 05
Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0 18-0 19
Black Diamond tool steel, per lb.	0 18-0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 18-0 19

Tin Plates Are Scarcer Than Ever

Montreal.

SHEETS AND PLATES.—The situation for tin and steel plates has not improved but rather is more acute. Tin plates are very hard to obtain. One large dealer says there will be little delivery possible before the end of the first quarter in the new year. It is perhaps known that no plates of one-eighth inch thickness or thicker can be imported, unless it can be shown that they are to be used for a purpose connected with prosecution of the war. Business is fairly quiet but the demand will be ample to use up all available supply.

MONTREAL—	100 lbs.
10 gauge	$12 50
12 gauge	11 60
14 gauge	10 05
16 gauge	10 15
18-20 gauge	10 25
22-24 gauge	10 40
26 gauge	10 45
28 gauge	10 55

Heaters In Big Demand; Range Business Fair

Montreal.

STOVES, RANGES, ETC.—There has been a better demand for heaters this fall than for some years and this continues to be good still. Manufacturers and dealers are receiving repeat orders and booked orders are being completed. There are no changes in prices and

stocks are light. The range trade is just fair but dealers have a tendency to buy only in smallest possible quantities. Oil heater business has continued brisk this fall.

Good Movement Of Gasoline And Coal Oil

Montreal.

OIL AND GASOLINE.—Business in oil is better with orders from country points increasing. This is due to the shortening of day light and, with colder weather prevailing, indoor life appeals to many who had spent more time outside. There is no shortage here of stock and prices remain unchanged with Royalite selling at 17c per gallon, Palacine at 20c and gasoline at 32½c.

Rope Demand Is Good With Prices Steady

Montreal.

ROPE AND CORDAGE.—There is a fair movement of rope to country points and some special orders are received by one firm which have increased its normal fall business. There are no changes, but the raw product is in firm market, as there is no guarantee that raw supplies can be secured when the present supply is exhausted, owing to transportation facilities. The advances of last week in cotton rope are firmly maintained.

Discount Changed On Lead Bends

Montreal.

LEAD PRODUCTS.—The movement of lead products is slow and there is but one change recorded, that of the discount on lead bends. This has been 20 per cent. on list and is reduced to 10 per cent. on list. Otherwise there is a fair amount of business.

MONTREAL—	
Lead pipe, lb.	$0.15
Lead waste pipe, lb.	0.16
Lead traps and bends	10% on list
Lead wool, lb.	0.15
Lead sheets, 3 lbs. sq. ft.	0.13¾
Lead sheets, 3½ lbs. sq. ft.	0.13¾
Lead sheets, 4 to 6 lbs. sq. ft.	0.14

No Movement In Old Metal Market

Montreal.

OLD MATERIALS.—The demand for old metals is very quiet indeed and there is no movement of consequence. There has been a weakness in old brass, which, however, has not called for a reduction in previous quotations. There is some prospect of an improvement locally by reason of the possibility of heavy requirements in the near future in some quarters.

MONTREAL—		
Tea lead	$ 0 04	....

Tin Is Higher; Lead Market Stronger

Montreal.

INGOT METALS.—There are two changes of an upward nature this week, and tin is quoted by one dealer 2 cents per pound higher while another quotes half a cent higher, making a range of from 70 to 72½c. Cable advices record a considerable advance in tin and within the past week two advances totalling ten pounds sterling have been made. Lead is in higher market at an advance of ¾c per lb.

TIN.—This is very scarce here and the market is firm with an advance again of from 2c to 2½c per pound. Dealers are quoting locally at from 70c to 72½c per pound.

COPPER.—The ingot market in copper is still confused owing to the uncertainty regarding the requirements, particularly, of the American government. Quotations are made here at 34c per pound.

LEAD.—The market for lead is stronger and an advance is recorded this week making present prices here from 9¼c to 9½c.

SPELTER.—The market is dull and uninteresting, with a very limited demand. Prices are unchanged at 10½c to 11c.

ANTIMONY.—In some quarters antimony is reported in better demand while others note a dull market. One firm reports a fair movement and quotations are made at 16c to 18c.

ALUMIUM.—The aluminum market is quiet and only a small business is obtaining. This is quoted at 60 cents.

TORONTO MARKETS

TORONTO, Nov. 8.—Changes in hardware lines have again been quite numerous, the majority of which have been in an upward direction. Exceptions to the advancing tendency was in the case of lead traps and bends and putty. Higher prices were made effective on oil burning heaters, rifles and shotguns, shoe thread, game traps, sidewalk scrapers, screen doors and windows, sleighs and auto coasters, speedometers, paper balers. Lower prices were also recorded on certain makes of automobile tire chains, following an advance recently recorded in this line. Business is reported good, with a good movement of commodities to northern points to take advantage of water transportation before the close of navigation.

Tire Chains Move Downward After Advance

Toronto.

AUTO ACCESSORIES.—Following a recent advance recorded in Dreadnought and Imperial automobile tire chains, there has now been made effective a decline in the Imperial line, which places them on same basis as before the advance recently recorded. The decline has been made in the list prices, and runs from 30c to 60c on some of the popular sizes. Prices given below are subject to a discount of 30 and 5 per cent. in lots of less than fifty and 30 and 10 per cent. in lots of fifty and over. Cross chains are quoted at the same discount as tire chains. Following are the list prices which prevail on some of the popular sizes:

	Dreadnaught	Imperial
30 x 3½	$4.50	$3.00
31 x 4	5.10	3.45
32 x 3½	4.80	3.30
33 x 4	5.30	3.60
34 x 4	5.50	3.70
35 x 5	7.00	....
36 x 4	5.80	4.10
37 x 5	7.80	....

Speedometers Make Considerable Advance

Toronto.

SPEEDOMETERS. — Higher prices were shown on J. M. speedometers. On the standard for Ford cars without instrument board the price has advanced 60c in lots of less than ten and 50c in lots of ten or more. The price for the standard Ford without instrument board was formerly $8.40 to the retail trade in lots of less than ten, and has now been advanced to $9. In lots of ten and over the former price was $8.10, while the price now is $8.65 each. Standard Ford with instrument board in lots of less than ten was formerly $10 each, and has now been advanced to $10.25. In lots of ten or more the former price was $9.80, and has now been advanced to $10. These prices are net to the retail trade.

Pocket Knives In Demand; Supplies Short

Toronto.

CUTLERY.—There is an eager demand for pocket knives at the present time, and wholesalers are unable to get sufficient supplies under present conditions. English makes have not been coming into this market for some time, and American pocket knives were sold up to the spring of this year, but the output of factories in that country has been sold up, and it is understood no further orders are being taken. Lines of table cutlery, such as carvers and knives and forks, continue to come forward from England, delivery in this respect being quite gratifying to the dealers in this district. Prices are holding steady, the greatest difficulty being to get the stock.

Fibreware And Wash Boards In Active Demand

Toronto.

TUBS, PAILS, WASHBOARDS.—The market for fibreware tubs and pails and washboards is one of continued strength. Prices are holding steady, and an active demand is reported. Prices have remained steady in these commodities for some weeks past. There is a fairly good booking business for future delivery, and spot business is keeping up well. Some concerns report a slight diminution in

sorting business, but for the most part business in these commodities is keeping up well.

Paper Balers Make An Advance Of $10

Toronto.

BALERS.—Now that the season for a better demand for waste paper is approaching, interest in paper balers is becoming more apparent. There is a better tone to the market for waste paper, and prices show some sign of firmness. One of the lines of balers to show a higher price this season is the Leader, which formerly sold at $65, and is now quoted at $75. Manufacturers stated they were compelled to advance their price owing to the amount of steel that enters into these articles, which has been at high levels for some time past. Climax balers continue to be quoted at $17.50 each.

Oil Heaters Make 10 Per Cent. Advance

Toronto.

HEATERS.—An advance of approximately 10 per cent. has been put into effect on Perfection oil heaters for booking prices delivery up to March 1, 1918. These stoves are now sold from list and discount instead of net prices as formerly. Following are the list prices on the various sizes: No. 520, $5.75 each; No. 525, $5.50 each; No. 530, $6.25 each; No. 630, $8.25 each. The above prices are subject to a discount of 25 per cent. Oil burning cook stoves are still quoted net list at $16 50 for three-burner and $21 for four-burner, with ovens for same at $4.50. This advance follows higher prices recorded in some other lines during the latter part of September.

Stevens Shotguns And Rifles Up 5%

Toronto.

RIFLES, SHOTGUNS.—An increase of approximately 5 per cent. has been made effective in the price of Stevens rifles and shotguns. On the rifles, Little Scout No. 14½ x .22 is quoted at $4, Favorite No. 17 at $8, Crack Shot No. 26 at $5, Visible No. 70 at $12.75 each. No. 12 x .22 is quoted at $6.50 and No. 12 x .25 at $6.50 each. No. 27 for gauges .22, .25 and .32 is quoted at $8.75 in each instance. No. 70 long arm is quoted at $12.75. In the shotguns, No. 235 x 12 gauge is quoted at $17.50, and No. 255 x 12 gauge is quoted at $21.75 each.

Shoe Thread Makes Advance Of 20%

Toronto.

SHOE THREAD.—Due to the firm situation in all cotton products, which in turn is the result of high prices in the raw cotton markets, there has been a considerable advance in shoe thread, amounting to approximately 20 per cent. Barber's No. 8 is now quoted at $2.49 per pound. No. 10 at $2.57 per pound, No. 12 at $2.60 per pound, No. 15 at $2.67 per pound, and No. 20 at $2.72 per pound.

Game Traps Again Move To Higher Levels

Toronto.

TRAPS.—An advance was recorded in the price of game traps of all kinds during the week, including Victor, Oneida, Hawley & Norton and Newhouse. Following are the new prices now prevailing: Victor, with chain—No. 0, $1.75 dozen; No. 1, $2.05 dozen; No. 1½, $3.05 dozen; No. 2, $4.30 dozen; No. 3, $5.70 dozen; No. 4, $6.70 dozen. Without chain—No. 0, $1.40 dozen; No. 1, $1.60 dozen; No. 1½, $2.45 dozen; No. 2, $3.70 dozen.

Oneida Jump, with chain—No. 0, $2.25 dozen; No. 1, $2.65 dozen; No. 1½, $4 dozen; No. 2, $5.80 dozen; No. 3, $7.75 dozen; No. 4, $9.10 dozen; No. 91, $3.30 dozen; No. 91½, $4.75 dozen.

Hawley & Norton, with chain—No. 0, $2.65 dozen; No. 1, $3.15 dozen; No. 1½, $4.70 dozen; No. 2, $6.55 dozen; No. 3, $8.75 dozen; No. 4, $10.30 dozen. Without chain—No. 0, $2.05 dozen; No. 1, $2.40 dozen; No. 1½, $3.75 dozen.

Newhouse, with chain—No. 0, $3.65 dozen; No. 1, $4.30; No. 1½, $6.40; No. 2, $9 50; No. 3, $12.65; No. 4, $14 90; No. 81, $4.95; No. 91, $5.40. No. 50 bear, $6.45 each; No. 5, $9.05 each.

Sidewalk Scrapers And Coaster Wagons Up

Toronto.

SCRAPERS AND COASTERS.—New prices were issued on sidewalk scrapers during the week which provide for an increase, quotations now being made on the basis of $5.45 per dozen. Discounts on sleighs and auto coaster wagons have been altered to provide for an increase in price. Where the former discount was 37½ per cent. it is now 35 per cent.

Booking Prices On Screen Doors and Windows

Toronto.

SCREEN DOORS AND WINDOWS.—Slightly advanced prices for booking orders on screen doors and windows have been announced by the manufacturers. Following are the prices on the doors:

Screen Doors.

No.		Per dozen in ½-dozen crates	Price per dozen in less than ½-dozens
1	—4-in., grained only	$15.15	$15.75
2	—4-in., grained only	18.70	19.30
21	—4-in., grained, filled and varnished	22.60	23.20
3	—4-in., grained, filled and varnished	24.70	25.30
21½	4-in., grained, filled and varnished	23.70	24.30
6	—4-in., grained, filled and varnished	25.75	26.35
8	—4-in., grained, filled and varnished	26.65	27.25
9	—4-in., grained, filled and varnished	31.60	32.00

Combination Screen and Storm Doors.

80—1¼-in., grained, filled and varnished, $52 doz.

Window Screens.

No.		Per doz.
12	—10-inch	$3.00
12½	—10-inch	3.40
1	—14-inch	2.95

8	—22-inch	6.25
9	—24-inch	6.85
10	—24-inch	8.40

Lard Pails And Shellac Pails Advance

Toronto.

WOODENWARE.—An advance of 10 per cent. was announced by the manufacturers of woodenware during the week to apply to lard pails and shellac containers. Wooden tubs and washboards have not yet advanced, but it is understood that the situation is one of considerable firmness in this line, and that an advance would not be improbable. For the lard pails, 20-lb. size is now quoted at $3.90 per dozen; 50-lb. at $7.35 per dozen, and 60-lb. at $8.10 per dozen. In the shellac pails, one-gallon is now quoted at 39c each; two-gallon at 48c; three-gallon at 57c, and five-gallon at 80c each.

Small Twine Keeps In Active Demand

Toronto.

CORDAGE, TWINES.—There was a continued good demand for small twines during the week in anticipation of Christmas business. With the number of packages sent overseas nowadays, it means that the demand for twine develops earlier than in normal years. By the time the Christmas season comes round the demand is expected to be at its best. Cordage lines are holding steady in price, as there have been no further changes in the fibre. Now that an expert has been appointed to examine into the matter of costs of fibres there has been a retarding influence working to keep down further advances in fibres. This naturally keeps rope commodities in steady position. Volume of sorting business on ropes is somewhat light at present. No great movement of rope has developed for Eastern ship contractors, it being anticipated this demand will not really start in heavy until well along toward spring.

Coal Heaters And Furnaces Going Well

Toronto.

STOVES, FURNACES, ENAMELWARE.—There was a continued good demand for coal heaters during the week and, in addition, good inquiry for furnaces. Some manufacturers are finding their ability to supply the demand taxed, as there is a lightness of supplies. One line of oil heating stoves advanced during the week, as will be noted in an item elsewhere. Enamelware held in steady market at quotations of last week. There is a fair demand for these commodities.

Gasoline And Coal Oil Prices Maintained

Toronto.

GASOLINE, COAL OIL.—There was no indication of a change in the market for oil products during the week. Gasoline consumption has declined slightly

owing to the coming of fall weather, but for the season of the year is keeping up well. The fine days of the past week have been very conducive to motor driving. Coal oil is in good demand as a result of the large numbers of heaters that have been sold within recent weeks. Prices of gasoline were still quoted at 31½c and 32c per gallon, and coal oil prices were unchanged at those given in current quotations. Benzine is quoted at 1c less than gasoline.

Nails And Wire Situation Unchanged

Toronto.

NAILS, WIRE.—There was a light demand for nails during the week with wholesalers, but manufacturers report that they are still finding a good consumption of their product. While there is a dearth of building operations at present owing to the approach of the winter season, there has been an active demand for nails to be used in boxes and other ways. This demand for boxes would seem to indicate that industrial conditions in other lines are good. Wholesalers for the most part continued to quote at $5.45 base, but lower prices were reported in some instances where competition was keen on quantities. Wire remained unchanged at $6.50 base for smooth steel wire.

Steel For Automobiles Will Be Restricted

Toronto.

IRON AND STEEL.—The issuance of an order by the War Industries Board of the United States limiting the use of ferro-chrome steel for commercial purposes has immediately affected the automobile industry. It is estimated that the automobile industry takes approximately 5 per cent. of the total steel production of the United States, and that the restriction of the use of high-grade steel in their manufacture will add considerable quantities to the available stocks for war purposes. It is the intention to restrict the use of steel to about 40 per cent. of that formerly used in automobiles and ultimately to bring it down to 10 per cent. This action will affect the number of pleasure cars available for Canada as well as the United States. The move also indicates that curtailment of non-essential industries, to the end that the war might be furthered, will be the settled policy of the United States Government. Any steel that is available for merchant trade now will continue to be at a premium. Locally there were no changes in price and demand is fair.

Black And Galvanized Sheets Again Weaker

Toronto.

SHEETS, PLATES.—There was a weaker tendency manifested in black and galvanized sheets during the week when further reductions were recorded; in the case of black sheets amounting to $1 on certain gauges, and 50c per 100 pounds on other gauges. While there are lower prices being quoted, as will be noted by observing the range given in quotations below, the following prices represent a decline from higher levels of the amount indicated above: No. 14 gauge, $10.65; No. 16 gauge, $10.75, in these two gauges the decline amounting to 50c. In the following gauges the decrease amounts to $1 per 100 pounds; Nos. 18-20, $9.30; Nos. 22-24, $9.35; No. 26, $9.40; No. 28, $9.50. Heavier sizes of steel plate remain unchanged, as there is a scarcity due to the requirements for shipbuilding. On galvanized sheets there was a decline of $1 per 100 pounds in certain quarters, which now makes the following prices prevail: 10¾ oz., $10.25; No. 28, $9.95; No. 26, $9.65; Nos. 22 and 24, $9.50; Nos. 18 and 20, $9.35; No. 16, $9.20; No. 14, $9.10. Declines were attributed to the establishment of fixed prices in the United States markets of $4.25 to $6.25 for sheets.

Corrugated Sheets Unchanged, But Weak

Toronto.

CORRUGATED SHEETS.—Although there was no change in the market for corrugated sheets, there was a weaker tone due to the establishment of fixed prices on sheets in the United States market. It is intimated that the effect might not be felt immediately, but as soon as new stocks begin to reach this market, probably about the first of the New Year, there may be some definite movement locally with respect to prices. Demand is light at present. Conductor pipe and eavetrough remained unchanged at discount of 10 per cent. off list.

Boiler Tubes For Domestic Uses Limited

Toronto.

BOILER TUBES.—A very limited use of boiler tubes is being permitted for the domestic trade by reason of the recent regulation providing that a license shall be secured for importation in each particular case. This order means that unless it can be shown that the tubes are for use in some way to aid war activities they will be denied. Supplies are light and must be held subject to first call for Government uses. Prices remained unchanged.

Traps And Bends Down; Solder Makes Advance

Toronto.

LEAD AND ZINC PRODUCTS.—A decline was registered in the price of lead traps and bends through the changing of the discount, making the selling price now 10 per cent. on list instead of 20 per cent. on list as formerly. This decline is due to the recent decline in pig lead. In solder, however, there has been an upward swing during the week due to the firm position in tin, in which big advances were recorded during the week. In the local market tin advanced 10c per pound. Guaranteed solder is now quoted at 39c per pound, an advance of 1½c; strictly half-and-half is quoted at 37¼c, an advance of 2¼c; commercial is quoted at 36c, an advance of 3¾c; wiping solder at an advance of 2¼, making the quotation now 37c. Solder wire remains unchanged at 45c per pound. There is a great scarcity of tin on the primary market in New York and prices advanced sharply in that quarter.

TORONTO—

Old Materials Weak; Regulation Affecting

Toronto.

OLD MATERIALS.—The shadow of regulation of prices on old materials continues to have a weakening effect on the market. Establishment of fixed prices is being negotiated, and there is strong indication that holders of old materials will be asked to sign pledges that they will not sell above the fixed prices. In the local market there is little business being done, as wholesalers are not anxious to take materials until the market is cleared of some of the doubt.

Booking Prices On Wire Cloth Are Lower

Toronto.

WIRE CLOTH.—Announcement has been made of booking prices on black wire cloth for delivery during 1918. In 100-foot rolls the price is named at $3 per 100 square feet and $3.05 in 50-foot rolls. Prices that prevailed on sorting business during the end of the season were 25c per 100 square feet higher than those that have now been named.

Tin Shortage Acute; Prices Jump Upward

Toronto.

INGOT METALS.—The feature of the week has been the decidedly firm tendency in the tin market induced by shortage of stocks on this continent. Lead was also in firmer position, with the leading producers in the United States moving their prices upward to the extent of ½c per pound. There has been a better buying movement in the market as the result of the firmness in these two commodities.

COPPER.—There was a disposition to mark time in the copper market during the week. The situation in the United States is one of stagnation owing to the fact that the producers have no further supplies of copper to offer at 23.50c, the established price, for at least the balance of the year, and the wholesalers have not cared to sell. The latter want higher prices, but the Government has made it plain that to sell at a higher price than 23.50c would incur its wrath. Locally prices held at 32c for casting and 33c for electrolytic.

TIN.—There was a very active market in tin during the week and prices went up 10c per lb. in one quarter, quotations being made on the basis of 75c per pound. There is an acute shortage of tin in the New York market owing to the inability to get shipments through from London. The British Government is holding up consignments through the failure to give permits for their shipment. Prices locally ranged from 65c to 75c pound.

SPELTER.—There is a continuance of the easy feeling in the spelter market, induced by the fact that production of spelter has been larger than current needs. The producers' margin has been cut, and there is talk of closing some smelting furnaces in order to curtail output. Locally prices held unchanged at 10c per pound.

LEAD.—There was a much stronger feeling in the market for pig lead during the week. The leading producer in the United States advanced the price to 6c, an increase of ½c per pound. Even at this figure it was stated that no sales were made, and independent concerns asked and secured as high as 6¼c to 6½c per pound. Locally there was a better demand for lead, and prices held unchanged at 9c to 9½c per pound.

ANTIMONY.—Business in antimony is quiet, and prices were weaker at 16c to 18c per pound.

ALUMINUM.—Market for aluminum was unchanged at 60c per pound. Amount available for domestic consumption is restricted owing to the demands of the Government for war purposes.

PIG IRON.—Interest in pig iron during the week centred around the announcement of the differentials, as arranged by the Steel Committee of the War Industries Board of the United States and the representatives of the steel and iron producers. The differentials are based on the Government's fixed price of $33 per ton for No. 2 foundry and basic iron. The Canadian situation has been affected thereby and lower quotations are probable in near future.

LONDON MARKETS

LONDON, Nov. 6.—Stoves have had a big sale during the past two weeks in this district. Business generally is good and prices are firm on nearly all lines. Advances are recorded on scoop shovels, spray pumps, door springs, axe wedges, meat cleavers, charcoal, snow shovels, game traps and sisal halters.

Scoop Shovels Up $1.00 Per Doz.

London.

SCOOP SHOVELS.—An advance of $1 per doz. list, has been made on scoop shovels this week. New net prices are quoted as follows:

No. 2, $14.80 doz.; No. 4, $15.80; No. 5, $16.30; No. 6, $16.80; No. 8, $17.80; No. 10, $18.80.

Jones Socket—No. 4, $17.42 doz.; No. 5, $18.05; No. 6, $18.32; No. 8, $19.40; No. 10, $20.30.

F. and W.—No. 2, $16.20 doz.; No. 4, $16.92; No. 6, $17.82; No. 8, $19.62; No. 10, $23.22.

SPRAY PUMPS.—New and higher prices on Myers spray pumps are as follows: No. 324 pump, $6.75 each; No. 327½ pump, $5 each.

Door Springs Up; Nails And Glass

London.

COIL DOOR SPRINGS.—Advanced prices have been made on coil door springs, bringing new quotations to the following; No. 2 springs, 60c per doz.; No. 3, 65c per doz.; No. 4, 70c per doz.; No. 5, 85c per doz.

Nails

Prices on nails are firm this week at $5.45 base for wire nails and $5.75 base for cut nails.

Glass

Glass prices are likewise firm and unchanged at 50 per cent. off list for single and double diamond and 40 per cent. off for cut lights.

Axe Wedges Up; Ash Sifters

London.

WEDGES.—Higher prices are quoted this week on axe wedges bringing new prices to the following: Blue top wedges, 65c per doz.; Climax wedges, 40c per doz.

Ash Sifters

Common wood side ash sifters are quoted this week at $2.15 per doz.; Banner sifters are $2.90 each and Burrowes No. 1 rocker sifters are $5.25 each.

Hand Sleighs

Hand sleighs are quoted this week at 37½ per cent. off list.

Big Advance On Meat Cleavers

London.

MEAT CLEAVERS.—A Considerable advance has taken place in prices on meat cleavers this week bringing new quotations to the following: Chicago market 7-inch, $31 per doz.; 8-inch, $33.50 per doz.; 9-inch, $37 per doz.

Rope

There is no change in prices on rope this week at the following: pure Manila, 39c per lb. base; British Manila, 33c base; New Zealand hemp, 33c and Sisal, 27½c per lb. base.

Harvest Tools

Harvest tools are also unchanged at 25 per cent. off list.

Charcoal Advances; Tar Paper Declines

London.

CHARCOAL. — Charcoal in paper sacks has advanced this week bringing new quotations to $1.40 per doz. bags.

Tar Paper

A decline is registered in tar paper E2 this week amounting to 9 cents per roll. The new price on tar paper is 70c per roll.

COW CHAINS are quoted at 12½ per cent. off list.

STOVE BOARDS (wood lined) are quoted at 30/10 per cent. off list.

Advance On Snow Shovels; Heaters

London.

SNOW SHOVELS.—An advance of $1 doz. list has been made in prices on snow shovels. The discount remains at 12½ per cent. off list.

Skates

Starr skates are quoted at 30 per cent. off list.

Oil Heaters

A good sale is reported for oil heaters in this district. Perfection heaters No. 520 are $3.85 each; No. 525 heaters are $3.80 each; No. 530 heaters are $4.25 each.

Good Sale For Carpet Sweepers

London.

CARPET SWEEPERS.—These sweepers are in good demand at present at following prices:

Universal jap'd, $30 doz.; Universal N.P., $34; Grand Rapid, jap'd, $32; Grand Rapid, N.P., $36; Princess, $37; Boudoir, $36; American Queen, $39; Parlor Queen, $42; Elite, $41.

Ever-Ready Daylos

Ever-ready Daylos are quoted this week at 33 1/3 per cent. off list. There is a good sale for this line and also for Daylo batteries at 33 1/3 per cent. off list.

Game Traps Up 12½ Per Cent.

London.

GAME TRAPS.—With the hunting season under way prices on game traps have advanced about 12½ per cent. this week. New prices on some lines are as follows:

Victor, with chain—No. 0, $1.75 doz.; No. 1, $2.05; No. 1½, $3.05; No. 2, $4.30; No. 3, $5.70; No. 4, $6.70.

Oneida Jump, with chain—No. 0, $2.25 doz.; No. 1, $2.65; No. 1½, $4; No. 2, $5.80.

Hawley & Norton, with chain—No. 0, $2.65 doz.; No. 1, $3.15; No. 1½, $4.70; No. 2, $6.55; No. 3, $8.75; No. 4, $10.30.

Newhouse, with chain—No. 1, $4.30 doz.; No. 1½, $6.40; No. 2, $9.50; No. 3, $12.65; No. 4, $14.90; No. 81, $4.75; No. 91, $5.40; No. 91½, $8.20.

Good Sale For Pocket Cutlery

London.

POCKET CUTLERY.—Pocket cutlery is very scarce but there is a good sale for any offered. Safety razors are moving out well at following prices; Gillette $3.75 each; Auto-Strop $3.75 each; Durham Duplex $3.75 each; Gem Junior 75c each; Ever-Ready 75c each.

English Razors

There is a good sale for English razors at following prices; I.X.L. black handle razor $18 per doz; Wade and Butcher, black handle razor at $18 per doz.

Sisal Halters Advance; Clocks

London.

SISAL HALTERS.—New and higher prices are quoted this week on sisal halters bringing present quotations to the following; 7/16-inch, $2.10 per doz.; ½-inch halters, $2.65 per doz.

Alarm Clocks

There is a good sale for alarm clocks at present at the following prices:

Good Morning, $1.15 each; Lookout, $1.50 each; Sleepmeter, $1.65 each; Big Ben, $2.50 each; Baby Ben, $2.50 each.

Cotton Gloves; Weather Strip

London.

COTTON GLOVES.—Cotton gloves in 8 oz. are 95c per doz. pair; cotton gloves in 10 oz. with knit wrist are $1.75 per doz. pair.

Weather Strip

Wood and felt weather strip is quoted at 75 per cent. off list. Swan hardwood strip is 75c per set. Frost King strip is $4.40 per doz. pkgs.

Stove Pipe and Elbows

Stove pipes 6-inch bright are quoted at $22.29 per 100 lengths; 7-inch pipe is $23.55 per 100 lengths.

Stove pipe elbows 6-inch Lt. pattern are $2 per doz.; 7-inch pipe is $2.15 per doz. There is a good sale for stove pipe and elbows in this district.

Prices Firm On Oil, Turpentine, Lead

London.

LINSEED OIL.—There is a fair sale for linseed oil at unchanged prices as follows:

	Raw	Boiled
1 to 2 bbls.	$1.37	$1.40 per gal.
3 to 5 bbls.	1.36	1.39 per gal.
6 to 9 bbls.	1.34	1.37 per gal.

Turpentine

A firm market prevails in turpentine with no change in prices as follows: 1 bbl. lots 77c per Imp. gal.; 2 to 4 bbl. lots, 76c per Imp. gal.; 5 gal. lots, 84c per Imp. gal.

White Lead in Oil

No further change is recorded in white lead in oil at the following prices:

	tons	less than ton lots
Pure lead	$16.20	$16.55 per 100 lbs.
Pure elephant	16.80	$17.15 per 100 lbs.

WINNIPEG MARKETS

WINNIPEG, Nov. 5.—Generally speaking market conditions show a steadier tone than at any time during the past two or three years, as is indicated by the limited number of advances in all lines of heavy goods. However, certain lines of shelf hardware and sporting goods continue to rise as manufacturers are compelled to replace their stocks. Among this week's list appear Winchester repeating shot guns, Remington repeating shot guns, Reach goods, and tank pumps, while a decline is noted on white lead in oil. Business for the past week shows increased activity and, with many of the dealers getting ready for the Christmas trade, cutlery, etc., is in good demand.

Revision Of Prices On Sporting Goods

Winnipeg.

SPORTING GOODS. — New prices have just been issued on Reach sporting goods and cover all lines of striking bags, boxing gloves, basket balls. Some of the lines show no advance, while others show advances varying from 10 per cent. to 25 per cent., a few of the more familiar lines are herewith quoted:

Striking bags S1, $28 doz.; S3, $40 doz.; S5, $48 doz.; S7, $57 doz.; S8, $64 doz.

Boxing gloves B0, $28 doz.; B2, $42 doz.; B3, $45 doz.; B4, $48 doz.; B6, $60 doz.; B7, $69 doz.; B9, $87 doz.

Basket balls 1½, $5.25 each.

Among spring sporting goods is an advance on Reach professional base balls, No. 0 of 10 per cent. making today's price $13.20 doz.

Shot Guns And Tank Pumps Advance

Winnipeg.

SHOT GUNS.—New prices have just been announced by Winchester Arms Co., but only affects shot guns, there being no advance in rifles. To-day's prices on a few of the standard lines are as follows:

Model 1897 take down repeater, 12 ga., $35.65; model 1897, solid frame, repeater, 12 ga., $32.80; model 1912, take down, repeater, 12 ga., $41.40.

Tank Pumps

Tank pump prices which have been steadily advancing for the past two years show yet another and by far the largest advance yet recorded, being 25 per cent. over the last price. To-day's market price is $10.00 each.

Nuts And Rope Prices Firm

Winnipeg.

NUTS.—Nuts of all kinds are in fair demand with prices remaining very firm. To-day's quotations are given below:

Square blank, small lots, 4½c advance on list; square tapped, small lots, 4¾c advance on list; hexagon blank, small lots, 4¾c advance on list; hexagon tapped, small lots, 5c advance on list; case lots, all styles, 1c lb. less than prices above.

Rope

The local demand for all kinds of rope at present is not heavy with prices remaining firm. Eastern cordage companies however report that owing to the increased shipbuilding that large quantities will be needed to supply this new industry. Whether this will affect the Western supply remains to be seen. To-day's prices are as follows: sisal 27½c lb.; pure Manila 38½c; British Manila 32½c; last yarn 27½c; African hemp 32½c.

Prices Firm On All Lines Of Wire

Winnipeg.

WIRE.—Steady prices still rule on barb wire and all other miscellaneous lines of wire and no changes in prices are expected prior to the opening of navigation in the spring. To-day's prices are as follows:

Barb Wire—Lyman 4-pt., $4.95 Ft. William, $5.25 Winnipeg; Glidden cattle, 2-pt., $4.80 Ft. William, $5.10 Winnipeg; Baker 2-pt., $4.75 Ft. William, $5.05 Winnipeg; plain twist wire, $5.10 per 100 lbs. Ft. William, $5.50 per 100 lbs. Winnipeg; plain galvanized wire—No. 9, $5.65 per 100 lbs. Ft. William, $6.05 per 100 lbs. Winnipeg; No. 2, $5.85 per 100 lbs. Ft. William, $6.25 per 100 lbs. Winnipeg; coil spring wire—No. 9, $5.70 per 100 lbs. Ft. William, $6.10 per 100 lbs. Winnipeg; No. 12, $5.95 per 100 lbs. Ft. William, $6.35 per 100 lbs. Winnipeg; annealed wire, No. 9, $7.20 per 100 lbs.; No. 10, $7.25; No. 12, $7.40; No. 14, $7.60; No. 15, $7.75; No. 16, $7.90; f.o.b. Winnipeg; bale ties, 14 ga., single loop, $7.65 f.o.b. Winnipeg, $7.25 f.o.b. Ft. William.

Scoops; Snow Shovels Advance

Winnipeg.

SCOOPS.—Prices on scoops which were withdrawn early in the week have been revised and show advances of 90c doz. on first and $1 doz. on fourth grade, making to-day's market price as follows:

Black Cat and Crescent—No. 4, $15.80 doz.; No. 6, $16.80; No. 8, $17.80; No. 10, $18.80.

Moose & Jones—No. 2, $16 doz.; No. 4, $16.90; No. 5, $17.35; No. 6, $17.80; No. 8, $18.70; No. 10, $19.60 doz.

Furnace Scoops—No. 3, $8.90 doz.

Snow Shovels

Snow shovels also show an advance of 90c doz. making to-day's prices on Moose, $13.65 doz.; King, $10.90 doz.; Prince, $8.60 doz. Prices on all other shovels remain unchanged.

Decline Recorded On White Lead In Oil

Winnipeg.

WHITE LEAD IN OIL.—Further decline in pig lead has again caused a reduction in white lead in oil of $1.40 per 100 lbs., this being the second in the past month. To-day's prices are as follows: Decorator's pure, ton lots, $16.65 per 100 lbs.; less than ton lots, $17 per 100 lbs.

Coil and Log Chains

The demand for coil and log chains still continues, with the market prices very firm. To-day's prices are quoted herewith:

Coil Chain—3-16 in., $13.75 per 100 lbs.; ¼ in., $11; 5-16 in., $10.10; ⅜ in., $9.25; 7-16 in., $9; ½ in., $8.75; ⅝ in., $8.65; ¾ in., $7.25.

Log Chain—5-16 in., $11; ⅜ in., $10; 7-16 in., $9.85; ½ in., $9.75.

Linseed Oil And Turpentine Firm

Winnipeg.

TURPENTINE. — The market still holds firm on turpentine and reports that some sources of supply are out of the marrket, together with transportation difficulties, point towards even a stronger market. Present prices are as follows: Barrel lots, 80c gal.; ½ barrel lots, 83c gal.; 5 gal. lots, 85c gal.; 1 gal. lots, 85c gal.; plus the usual extras for containers.

Linseed Oil

Prices still remain very firm on linseed oil despite the fluctuations in flaxseed and indications point to firmer markets pending the outcome and delivery of the Argentine flax crop. Prices quoted today are as follows: Raw, $1.57 gal.; boiled, $1.60 gal.

Black And Galvanized Sheets Have Declined

Winnipeg.

SHEETS.—A decline has been recorded in the price of galvanized sheets due to the easier feeling in the market as the result of establishment of fixed prices by the United States Government. No. 16 gauge has declined 75c per hundred pounds, No. 30 gauge has declined 70c, while intervening gauges have declined 80c per hundred pounds. Black sheets are also quoted lower, a decline of 25c being shown on gauges Nos. 10 to 12, 50c on gauges Nos. 14 to 16, and 75c on Nos. 18 to 28. Following are prices now prevailing:

Galvanized sheets: 10¾ oz., $11.80; 28 gauge, $11.40; 26 gauge, $11.10; 24 gauge, $10.95, 22 to 18 gauges, $10.95; 16 Amer., $11.25.

Black sheets: Nos. 10, 12, 14 and 16, $11; Nos. 13-20, $10.05; Nos. 22-24, $10.10; No. 26, $10.15; No. 28, $10.25.

PITTSBURG MARKETS

PITTSBURGH, P.A., Nov. 5.—The rumors that price-fixing programme at Washington had been halted, referred to in last letter, were followed by semi-official statement that such was the case, but the statement meant nothing as there was no intimation how long the halt would continue. Last Wednesday and Thursday the various committees of the American Iron and Steel Institute were in session in New York and immediately afterwards the opinion was expressed by those who had attended the meetings that a batch of prices would be announced at Washington very shortly, covering some or all of the following items: Sheets, tin plates, wire products, tubular goods and scrap. Sheet and tin plate prices at least will probably have been announced before these words are printed.

If all the products just mentioned are set the major products of the steel industry will have been covered and further price-fixing would relate rather to manufactured goods, such as shafting, rivets, bolts and nuts, spikes, etc. These may or may not be taken in hand.

Pig Iron

The market has been fairly active and it has been moving smoothly. Furnaces are disposed to take care of the immediate needs of regular customers and generally are able to do so. Since the general agreement announced Sept. 24 the furnaces have been selling basic and foundry at $33 at furnace, in all districts, with valley Bessemer at 10 per cent. higher, or $36.30. A schedule covering details, including analyses, is just about to be promulgated by the American Iron and Steel Institute. Direct testimony to the activity of the market since prices were set is furnished by the monthly compilation of W. P. Snyder & Co. This compilation has been made monthly for years, and takes account of all valley basic and Bessemer sold in a month, in lots of 1,000 tons and over, showing the average price realized on the sales. This average is used in the adjustment of some contracts made on a sliding scale basis. The October averages showed the set price, but the important fact was that the total tonnage included in making up the averages was fully 100,000 tons, while in each of the three preceding months the tonnage reported sold was much less.

Steel Quiet

There has been very little market activity in unfinished steel and finished steel products. The mills are well sold up and buyers are well covered, while the general attitude is that business should not be done at this time for far forward deliveries. In most of the comcomodities little material is available for early deliveries, but sales when made are at the set prices, when there are any. Prices as announced are stated to be subject to revision Jan. 1 or later and the common view is that if revised the revision will be downwards. While it has seemed improbable, of late, that there would be any occasion to reduce prices, in the past few days this possibility has become less remote, as the curtailment in commercial consumption of steel, due to the country becoming more fully engaged, in sentiment and action, in the war, has become more conspicuous. In some quarters recognition of the changes war would effect has been somewhat tardy.

Decline in Sheets

The break in sheets recorded in last report has been followed by further declines. The existing conditions disclose clearly the fictitious nature of the sheet market in the past few months, something that was appreciated by some of the best posted consumers but certainly was not admitted by the mills. The break had carried the market in blue annealed and black sheets to a level of 6.00c a week ago. At the beginning of this week there were occasional sellers at 5.50c, while later in the week this quotation became common and quotations of 6.00c were not taken seriously by buyers. Two or three mills made occasional quotations of 5.25c on No. 28 gauge black, and it seemed clear that they were doing this merely to sell about a day's rolling each day. Some of them had practically run out of business. Last April the American Sheet & Tin Plate Company sold its second half output at 5.00c for blue annealed and 5.50c for black, with .25c extra for open-hearth, but the tonnage did not go around and independents immediately began selling at higher prices. Now the market is back to the old level, and the net result of the flight to 9.00c or thereabouts has been to make an extra profit for the mills on a relatively small tonnage and disorganize the business of many consumers whereby the consumption of sheets to-day is undoubtedly at a smaller rate than would be the case if the market had remained on a steady basis.

Coal Supplies Improving

Occasionally the steel mills have lost a little production through shortage of coal, and the majority of them have been on the ragged edge for weeks, with practically no stock piles. For the 24 hours of last Monday the priority order in favor of lake coal shipments was suspended and shipments to the line trade were heavy. Yesterday the priority order was removed entirely as relates to fully half the railroad divisions, as the lake shipping season is now nearing its close, and coal supplies promise to be decidedly better to mills and other important consumers. Effective last Monday morning the government coal prices were advanced 45 cents, this covering the wage advance arranged Oct. 6, and probably something in addition. The new prices for Pittsburgh district coal are

$2.20 for slack, $2.45 for mine-run and $2.70 for screened, per net ton at mine, with 15c to be added by brokers when they make the sale.

Government Buying

Government buying is somewhat heavier, as the matter of shells is now receiving a great deal of attention. Some additional sheet tonnages are being allotted, making the sheet requirements somewhat larger than had been anticipated. There is no occasion to revise former guesses as to the total war steel requirements. For the Government and its Allies these promise to run next year at the rate of something like 1,000,000 gross tons per month, or, as stated formerly, between 30 and 40 per cent. of the total output.

Contract Abrogation

Recently the Federal Trade Commission distributed a questionnaire relating to the abrogation of contracts. The subject is up in connection with the iron and steel price regulation bill the commission is drafting for submission at the next session of Congress, convening Dec. 5. The steel producers are practically a unit against the idea and the suggestion is meeting a storm of protest. While the fixing of prices has doubtless placed some manufacturers in an awkward situation, through their having contracts to accept material at higher prices, it would seem that attempts to abrogate some or all contracts would make the remedy much worse than the disease.

FIXED PRICES REPRESENT CUTS

Under date of November 8, the Iron Trade Review of Cleveland has the following to say:

"Market equilibrium in iron and steel, which has been upset by the uncertainties of government regulations, has been largely restored. Further official announcements which the week has brought forth have gone far to fill in the gaps in the agreed price schedule. It is evident that the government proposes to the industry itself the enforcement of the fixed maximums on mill and furnace products, as well as the settlement of such details as remain to complete the market's realignment. Federal initiative is to be exercised rarely, if at all, in further price decisions. Responsibility for the adjustment of unregulated lines, especially in finished material, is placed with the manufacturers, and is to be made in accordance with the established market standards.

Irregularities of the present furnace operations, due mainly to fluctuating coke supply, is shown by the pig iron statistics for October. With 354 furnaces active, the average daily output was only 106,304 tons, compared with 328 active furnaces and 113,167 tons in October, 1916, and with 276 furnaces active and 100,656 tons daily in October, 1915. Production last month was 3,295,409 tons, the fourth best showing for the year to date.

More active selling of pig iron is following the final fixing of price differentials covering all grades. As many provisional contracts now are being converted to regular form, the good faith of the producers in adhering to the government schedule is set forth more concisely. It now is confirmed that October sales were much heavier than generally realized. The transactions upon which the October averages of $33 and $36.30, valley, for basic and bessemer respectively were computed were approximately 100,000 tons. In Eastern Pennsylvania the week's sales totalled 40,000 tons.

The agreed prices on finished steel represent some sharp cuts from the previous open market levels. This is particularly true in sheets where they are lower than the makers had expected. The government figures will have the effect of re-establishing uniformity in various products in which a variety of prices were being quoted.

Scrap represents the only material in which the government has revised prices upward. Heavier buying of finished steel is promised by the clarifying effect of the new prices.

SHORT SEASON FOR GLASS INDUSTRY

(Continued from page 35.)

"The United States manufacturers, from whence comes our supply, are a unit in stating that present conditions must bring further advances. Even on the basis of to-day's factory costs, to yield the jobber a living profit, sheet glass should be sold at about $11 base per 100 ft., single thick in Montreal and Toronto territory and freight advances from 50c to $1.50 a case in the east and west Canadian territory.

"Canadian jobbers to-day are making current sales about on the basis of factory costs and in some instances, at less than factory costs. This is a condition which cannot long remain.

"There must be a substantial advance in price; but, at any price, window glass is bound to be scarce and the stocks in Canada to-day in the hands of the jobbers and retailers are very small and badly assorted, especially in small sizes, single strength."

NEW HARDWARE GOODS

(Continued from page 34.)

"Crane" Tire Pump

The "Crane" tire pumps, also manufactured by this company, is a crank-shaft driven, detachable pump which is claimed to be 97 per cent. efficient and to be so compact as to fit into the overcoat pocket. This company makes both gear-driven and crank-shaft-driven types at the same price. The cylinder and piston in the pump are of pressed steel and the crank-shaft drop is forged from high carbon steel. Connecting rods are said to be of high quality bronze bearing metal; packing ring special alloy. All pumps are claimed to be thoroughly efficient and simple in construction.

STAINLESS STEEL CUTLERY

Messrs. Landers, Frary & Clark, New Britain, Conn., through their Canadian agents, A. McFarlane & Co., Ltd., Montreal, are offering to the Canadian trade a new line of stainless steel table cutlery under the trademarked name of "Resistain."

Another line recently placed upon the market by the same firm is their French Cook's Knife. This pattern knife, for which there was a good steady demand, was formerly imported from Britain, France and Germany, but since the war has been practically off the market. Messrs. A. McFarlane & Co., Montreal, will be glad to furnish details regarding both of these lines.

GETTING THE RETAILER TO COLLECT BILLS

Continued from Page 28

caste in the whole retail community. In the same way a borrower may move from one bank to another and gain slight advantages by sharp practice but such benefits are small in comparison with the danger of losing his credit standing with the banks in general. A case illustrating this point came to my attention recently:

A small retailer in a western city borrowed $200 for 30 days. At the end of the period he was unable to meet the obligation and went to a second bank and borrowed the money to pay the first. Again at the end of the period he raised funds from a third bank to pay the second. Now, because this was a comparatively large business centre and the account was a small one, this scheme appeared to work successfully. But that merchant now admits that he later found that he can in the long run make better arrangements by dealing candidly with one bank.

That he should come to this conclusion is only natural. It must be obvious that if a merchant's credit was not sufficient to warrant a loan from one bank it should not be with another. Instead of moving from bank to bank—which could only be done for a limited time and in the case of small amounts—the merchant would undoubtedly have been better served in the long run had he dealt fairly by the first bank, providing of course that it gave him satisfactory service in his particular line of business. Had he given the manager full particulars of his standing and prospects and convinced him of his integrity he would quite probably have been as well treated in the first bank as he was in the second or the third. Ignorance of banks and methods and hesitancy in being candid in discussing business affairs with the manager are about the only excuses for a merchant forsaking the straight for the winding road in his business dealings.—J. W. T.

Whitby, Ont. — The United Rubber Mfg. & Reclaiming Co. propose establishing a factory here. The town will loan the company $25 000 and free light and water in return for which they will erect and equip a factory costing at least $50.000. A by-law will be submitted to the ratepayers on Nov. 26.

WEEKLY PAINT DEPARTMENT

Use More Paint

Co-operation Necessary to Educate Consumer in Use of Paint —The Protective Element in Paint—Repeat Business to be Secured—Benefits in a Twelve Month's Sales Program.

IN addressing the members of the National Paint, Oil and Varnish Association, Ernest T. Trigg dealt at length with the necessity for co-operative action amongst manufacturers in an educational campaign directed at the consumer on the use of paint. He pointed out that the work so far undertaken by the various associations had taken up only the protection of the industry and the development and perfection of products. These are, of course, essential in the foundation of any successful business, but such a foundation profits nothing without the other great essential of a distribution equal to the limit of the industry's capacity.

The greatest problem facing us today is that of developing the consumption of paint and varnish products to a point more nearly reaching that of its possibilities. The individual and independent activity of hundreds of manufacturers is responsible for merchandising practices in the industry resulting in a vast annual waste of time and money in destructive competition. Manufacturers have fallen into the habit of concentrating a large part of their sales efforts upon the customers of other manufacturers instead of devoting the effort to the development of new business for which practically unlimited opportunity exists. Too much thought is given to the dealer, and not enough to the consumer. Important as the dealer is in the situation, he is, nevertheless, but a cog in the wheel of distribution, a halfway station to the ultimate consumer. In the final analysis, our institutions exist because of the consumer, and naturally, therefore, the more we can do as an industry to develop demand and consumption on the part of the consumer, the more will we be benefiting the dealer himself. The estimate has been made, that not over 25% of the paintable surfaces,—public buildings, railroad rolling stock, vehicles, bridges, houses, barns, outhouses, etc.,—throughout the country are painted with sufficient frequency to keep them in proper condition. It is likely that this percentage is too high, a fact which can be verified by even most casual observation. One of the conditions which retards the industry growth is the idea in the mind of the average consumer that the first function of paint and varnish is that of decoration. Decoration, sanitation, cleanliness, appeal to personal and civic pride, etc., are all important factors in its use; but the first and greatest function is to protect and preserve the more costly materials over which it is applied.

The Protective Element in Paint

A property owner can expend an equal amount of money in no other way to bring him the same returns or dividends as an investment in renewed preservation materials for his property when the life of its previous protecting coats commences to fail.

The action of the elements,—wind and water, heat and cold,—soon starts deadly decomposition to work on unprotected surfaces and the step from the early stages to final destruction is a short one.

Money spent in paying fire insurance premiums protects against only a possible loss while money spent for the products of our factories protects against a certain loss just as inevitably as that night follows day.

It is this protection and its consequent conservation of property values which pays the owner big dividends plus the fact that property kept in a good state of paint and varnish repair inside and out is from its very appearance enhanced in value and serves to elevate its owner in the minds of his neighbors and the community generally.

It has been definitely developed from reports received from over 500 bank presidents in practically every state in the Union that property kept well painted entitles the owner to more consideration when credit accommodations are required; that such property will sell for more money and that it is an asset to the property owner in his financial dealings for it denotes to the banker and to local tradesmen a thrifty, careful and economical risk.

It is generally realized by merchants called upon to furnish credit accommodations, that the man who has enough pride to keep his house, barn, outhouses, fences, etc., repaired and uses paint and varnish when his property needs it, has too much pride and is altogether too good a citizen not to pay his just indebtedness.

Repeat Business to be Secured

As producers of a building material, we in the paint and varnish business have one great advantage over the producer of any other building material made, in the sense that such other producers find only one sale for their product with each separate operation, while paint and varnish is, or should be, an ever recurring necessity as a collateral asset.

Cataloguing our products in the mental registrations of our citizens as a necessity, the use of which cannot be dispensed with at will, but which must be employed with regularity and frequency means an effect far beyond the mere consideration of paint and varnish for household use. It means a new appreciation and realization of our industry in the factory, mill and office as well as the home.

Benefits in a Twelve Months' Sales Program

Except in the general directions already referred to, we have accepted conditions as they have developed without any centralized or concentrated effort to mould them to best suit the need of the industry itself. For instance, the bulk of our business is done in three or four months of the year. During the other months the manufacturer and the painter, too, practically mark time. It is a business of a short high peak and a long depression. The employing painter is, if anything, at a greater disadvantage on account of this peak and depression condition than the manufacturer, because of the very great difficulty in getting experienced and satisfactory help during the short interval of the few active months when every other employing painter is bidding for the same labor. The employing painter is utterly deprived, under present conditions, of the opportunity of developing good men of his own whom he can afford to train and keep in his employ year in and year out, and thereby build up a dependable, loyal, efficient organization, which means greater success in his own business, and at the same time means greater satisfaction and better service to his customers.

We have not as yet taken upon ourselves the responsibility which rests upon the shoulders of every branch of the trade to, first, arouse our citizens in all

(Continued from page 48.)

JAMIESON'S
PURE PREPARED PAINTS
They Have Selling Prestige

Jamieson's pure prepared Paints and Varnishes have been lifted to their high standing in Canada by the favorable opinion of users thereof, covering a period of three score of years.

Conscientious endeavor to build up a business on the quality of products has given our lines a prestige throughout the land that proves a selling force for the dealer. If you are not sharing in the power of this selling force you are overlooking an opportunity.

Anchor your faith to Jamieson's products and your Paint and Varnish business will be crowned with success.

The Psychology of the Counter Display

A counter display of Moore's House Colors gets home its arguments at the most advantageous moment — when the prospective paint buyer actually has his hand in his money pocket, and is prepared to make a purchase. There are plenty of householders coming into your store each day who are intending to paint, but keep putting it off or forgetting. An attractive counter display is just the reminder needed to turn these prospects into buyers.

That suggestive arrangement on your counter is a memory-jogger that they can't ignore. You'll get many a sale of Moore's House Colors through a counter display. Try one to-day.

Benjamin Moore & Company, Limited, West Toronto

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Nov. 7th.—The paint markets here are very firm with a fair amount of business offering. The features of the week are centred in linseed oil with an approximate advance of two cents per gallon, and with oil held very firmly at the new prices, and of a 3-cent advance in turpentine. This makes a quotation of 75 cents for turpentine and practically all dealers are quoting on this basis in single barrels. A good deal of products are now finding their way into manufactured paint, as makers are getting spring supplies made up. White lead in oil is without new feature and is firm at last week's prices. One dealer is shipping a good deal of mixed paint to the head of the lakes to be ready for spring delivery. Some considerable business is obtaining for putty owing to the nearness of severe weather.

Linseed Oil Has Advanced Two Cents

Montreal.

LINSEED OIL.—The firmness of the linseed oil market is marked this week by an advance of 2c per gallon by many dealers. This is the direct result of a higher price for flaxseed which has risen within the week from $3.05 to $3.18 per bushel for cash seed, and the market is very firm. There is still difficulty in securing cars, although the demand for oil is not heavy. We quote as follows:

Linseed Oil-	Per Imperial gallon Raw	Boiled
1-4 bbls.	$1.32-$1.35	$1.35-$1.38

Turpentine Higher; Not Very Active

Montreal.

TURPENTINE.—Indications as pointed out in last week's HARDWARE AND METAL were toward a strengthening in the price of turpentine. Practically all dealers have advanced their quotations, and there is now an unwillingness to quote less than 75 cents on any quantity, either single barrels or large quantities. This makes an advance of about 3c per gallon. The movement is not large but the market continues very firm. Quotations are as follows:

Turpentine	Per Imp. gallon
1-5 bbls.	$0.75

White Lead In Oil Steady Without Change

Montreal.

WHITE LEAD IN OIL.—For the time being, at least, white lead in oil seems to have rested its downward movement of past two or three weeks, and there are no changes. It is firmly held here at last week's prices, and there is little movement to the trade. A considerable amount is now being used in the manufacture of mixed paints for spring.

Mixed Paint Slow; Spring Orders Move

Montreal.

MIXED PAINTS.—Business for immediate shipment is reported rather slow, and sorting orders are small. One firm states that it is making shipments to the head of the lakes before the close of navigation, and thus securing the advantage of water freight rates. This will also facilitate delivery on their spring business. Generally speaking, dealers anticipate a brisk season ahead.

Putty Demand Is Heavier This Week

Montreal.

PUTTY.—Some dealers report a very brisk demand for putty. This is occasioned by the approach of cold weather and the consequent need for repairs and the attaching of storm sashes. There is no change in price but the prices are firm with all dealers. As noted last week, there is some delay expected in connection with shipments of whiting from England, but in the meantime stocks here are fair. Standard putty quotations are: Bulk, in casks, $3.60 per 100 lbs.; bulk, 100-lb., 50-lb., or 25-lb. drums, $4.45; bladder in barrels, $3.75 per 100 lbs.

TORONTO

TORONTO, Nov. 8.—There was a firmer tendency to the linseed oil market during the week as the result of the upward swing in the price of flaxseed. Turpentine held steady although the primary market gave evidence of some weakness. Whether this will continue to hold for any length of time it is still too early to judge. Demand locally for turpentine is light. There has been a slight readjustment in the price of putty and prices have declined 10c per hundred pounds. White lead in oil is holding steady at the recent decline. A turn in the pig lead market in an upward direction has injected a measure of firmness into present prices. Demand for white lead in oil is light. Booking orders on mixed paints for spring delivery are reported seasonably good. Sorting trade is somewhat quiet at present.

Linseed Oil Firmer; Price Range Widened

Toronto.

LINSEED OIL.—There was a firmer undertone to the linseed oil market during the week due to an upward swing in the price of flaxseed. Cash seed in the Winnipeg market on Wednesday of last week closed at $2.95 per bushel and on Wednesday of the present week the quotation for the same buying was $3.20½ per bushel. In the December option there was less of a spread but there was a corresponding higher price, on Wednesday of last week that option closing at $2.81½, and on Wednesday of the present week at $2.95¼. In the local market the range of prices has been widened, quotations now being made from $1.32 to $1.41½ for raw oil in single barrel lots. There is a fair movement of linseed oil considering the season of the year.

	Raw. Imp. Gal.	Boiled. Imp. Gal.
1 to 2 bbls.	$1.32-$1.41½	$1.34½-$1.44½
3 to 5 bbls.	1.31- 1.40½	1.33½- 1.43½
6 to 9 bbls.	1.29- 1.38½	1.31½- 1.41½

Turpentine Held Steady; Primary Weaker

Toronto.

TURPENTINE.—There was a steadiness in the market for turpentine during the week, prices in the primary market having apparently reached the peak for the present at least. In the Savannah market quotations were 2c lower on Wednesday of this week as compared with the same day last week. This may be only a temporary fluctuation of the market, however, as the end of the producing season is approaching, the month of November about completes the season's run. From this time forward until new crop begins to come in there will be a drain on existing stocks. Locally the demand for turpentine has been light and prices are unchanged from those of last week.

	Imp. gal.
1 barrel	$0.74-$0.77
2 to 4 barrels	0.73- 0.76
5 gallon lots	0.82- 0.85

Booking Orders On Paints Reported Fair

Toronto.

MIXED PAINTS.—With the approach of winter the demand for sorting orders on paint is becoming less and manufacturers are turning their attention to booking business for delivery next spring. Orders for future delivery are reported seasonably good and are expected to increase as the season advances. Although there has been a decline in the

WEEKLY PAINT MARKETS

(Continued from page 50.)

price of white lead in oil manufacturers point out that the price of paint at the present time was based on white lead in oil at much lower prices than those prevailing at the high point. There is no intimation as yet that a change in price is probable.

White Lead In Oil Steady; Pig Lead Firmer

Toronto.

WHITE LEAD IN OIL.—Conditions in white lead in oil remain unchanged during the week so far as prices are concerned. There is an undertone of firmness, however, due to the upward trend of the pig lead market during the week. In the primary market in New York this latter commodity advanced from ½c to 1c per pound from the low point reached last week. Conditions would seem to indicate that for the present at least the downward swing in the pig lead market has been arrested. Demand for white lead in oil is light. Quotations are made on the basis of $16.20 in ton lots and $16.55 per hundred pounds in less than ton lots.

Putty Prices Show Decline 10c *Hundred*

Toronto.

PUTTY, GLASS.—There was a slight readjustment in prices in the downward direction during the week to the extent of 10c per hundred pounds. Bulk in casks is now quoted at $3.80 per hundred pounds, bulk in 100-lb. drums at $4.55, and 25-lb. drums at $4.65. In 12½-lb. irons the price is $4.90 and bladders in barrels are also quoted at $4.90 per hundred pounds. There has been a seasonable demand for putty due to fall work that is now proceeding in the way of storm windows and doors.

Glass continues in a firm market. An interview with a glass dealer who has recently visited the producing fields of the United States, and which appears elsewhere in this issue, will be found of interest.

USE MORE PAINT

(Continued on page 52.)

walks of life and in every avocation to the fundamental necessity of frequent and regular use of paint and varnish to protect and preserve, thereby eliminating one of the greatest economic wastes in this country; to decorate and beautify their property of every kind as a civic requirement of the first order, as an evidence of good citizenship, and as the highest expression of advanced civilization; second, stabilize the business and in so far as possible spread the new and bigger consumption more evenly over the twelve months of the year; and third, to co-operate with the master painters by encouraging a larger percentage of our responsible young men to take up the painting trade as a serious business to the end that this great and important branch of the industry may be largely increased numerically by additional thoroughly skilled and responsible workmen and that the painting craft may continue as the responsible connecting link between the producing industry and the public.

This is essentially a day of community action. The old saying that "competition is the life of trade" is superseded by the modern "live and let live" thought that "co-operation is the life of trade." All round us in every line of activity, social, professional and commercial, are striking evidences of it.

The solution of our problem in a big, broad, impersonal and impartial way will be a vast benefit to every community in the United States and Canada, because a liberal use of paint and varnish is in no small measure a gauge of a nation's civilization and progress.

This campaign will eventually result in increased business for every one connected with it.

This campaign, born in the spirit of "one for all and all for one," without the slightest vestige of personal ambition or design, aimed only to put the industry on a higher, better and sounder basis, has no axe to grind with any other activity; on the contrary, we pledge ourselves to co-operate and support so far as is within our province and the restriction of our subscriptions, all other proper and possible activities and interests of every branch of the industry.

U. S. EMBARGO EXTENDED

A despatch from Washington states that another long addition to the list of articles which will be licensed for export only where they will contribute to successful prosecution of the war was issued recently by the War Trade Board. The new list includes: "Amorphous phosphorus, anti-friction metals, bitchromate of potash, bishmuth salts, boring machines and mills, brass, caustic potash, China, weed oil, chrome steel, cromium, cobalt, copper, and alloys unless containing less than ten per cent., crucibles, industrial diamonds, drill presses (except sensitive), drilling machinery, ferro chrome, ferro vanadium, ferro tungsten, all articles containing flax manufactured in the United States, flannelette, grinders, graphite electrodes, animal hair, hydrofluoric acid, jute and producers, manganese, drilling machines except hand drillers, mercury, molybdenum, naxos emery, nickel and alloys, plumbago and products, planers, peas, salammoniac, sheetite, sodium phosphate, solder, tin and alloys, tungsten and alloys, vanadium, wool and all its products suitable for military purposes, and yellow phosphorus."

PROJECTED IRON AND STEEL INDUSTRY IN PORTUGAL

The "Diario do Governo" (Lisbon) publishes a law authorizing Portuguese Government to grant, by means of a public call for tenders to a Portuguese firm or enterprise, a fifteen years' concession for the establishment and exclusive right of working of an iron and steel industry by the most modern processes. The concessionnaires must install at their own cost a modern iron and steel works, comprising blast furnaces, steel furnaces, rolling mills, presses, shearing machines, wire-drawing plant, and any other necessary accessories for an initial annual production of at least 100,000 metric tons of cast iron and for the manufacture of iron and steel bars, plates, sheets, rails, etc. The establishment must be in working order within a period of five years from the date of the granting of the concession. The Government, on its part, will grant land for the erection of the works, exemption from industrial and other taxes, etc. The concessionnaire will be able to import free of customs duty all plant and materials which cannot be satisfactorily acquired in Portugal during the first five years of concession. The Government will also authorize the construction of railway lines up to 15 kiloms, (about 9½ miles) to connect the new works with the State railway lines in the vicinity.

SUBSTITUTE FOR SHEET STEEL

An asbestos-cement composition is being manufactured in England as a substitute for sheet steel for various purposes. Ground asbestos is mixed in the proportion of one to six with Portland cement and worked into a paste with water. A machine something on the order of those used in making paper forms it into sheets, which are trimmed to size and if desired corrugated for roofing purposes. After seasoning the material is ready for use. It is durable, resistant to climatic conditions, particularly acids in the atmosphere; fireproof and also a non-conductor of heat.

WEST DRAWS AMERICAN FARMER

Influx Into Canadian West Continues in Good Volume

Advices from the West indicate that a very fair movement in the sale of farm lands is evident. Most of the lands sold recently were to American farmers from the middle western states who are leaving their old farms for the Canadian prairies. Incoming American settlers are arriving in increasing numbers every week, according to official returns from the boundary ports, those coming bringing large amounts of ready cash, which finds its way to savings accounts in Canadian banks.

NO EXPORT OF MUNITION MACHINERY

An order-in-council has been issued on the recommendation of the acting Minister of Customs ordering that the exportation to the United Kingdom, British possessions and protectorates and to all foreign countries, of plant, machinery and equipment of all kinds for the manufacture or production of munitions of war shall be and is hereby prohibited except under license from the Minister of Customs.

What's Wanted

Almost every week you want something which you could quite easily secure by consulting with your fellow hardwaremen.

Perhaps you need a clerk. The best of them read Hardware and Metal and watch the "Wanted" page for new opportunities.

Possibly you want to buy or sell a hardware business. Hardware and Metal's subscribers are the best prospects in Canada. Talk to them in the "Wanted" page.

Or do you want to sell or exchange some surplus stock? Here again the "Wanted" page can help you.

Cost: 2 cents per word for first insertion; 1 cent per word for subsequent insertions of the same ad. Box Number 5 cents extra.

Varnish buyers are realizing more and more the importance of selecting Finishes of known merit, owing to the high cost of labor, because the cost of application is the big item in finishing operations.

It costs no more to produce a handsome and permanent finish with "Berry" products than with the kind that wears out in a few months. The difference in the price per gallon is slight.

Berry Brothers varnishes, enamels and stains are so safe to recommend and easy to sell, because even the smallest buyers have learned that they combine beauty, durability and economy.

Lengthen the Life of Metal Work

It is a hard problem to keep rust and corrosion from eating the very life out of metal structures, therefore, economy demands the best possible preventive against these destructive elements.

CARTER'S Dry Red Lead

gives a perfect sealing coat that absolutely protects all kinds of metals from the elements that destroy them, and immeasurably lengthens the life of Metal Work.

We make Orange Dry Lead and Litharge,

Special Dry Lead and Litharge, for Color,

Varnish and Rubber makers,

Oxides for Potters and Storage Battery Makers.

All products are wholly Canadian made and highest standard qualities.

Ask for Quotations.

The Carter White Lead Co.
Limited
91 Delorimier Avenue
Montreal

A paint that will mean a rapid turnover in your paint department — a profitable paint for you as well as the user. A paint which has been manufactured and used in Canada since 1842.

Crown Diamond Liquid Paint

Should be the line for every wide-awake dealer. Each Crown Diamond Agent receives REAL selling co-operation and advertising features that actually sell more paint.

Sell more paint — make more money and have satisfied customers. Write now for full details of the Crown Diamond Selling Plan.

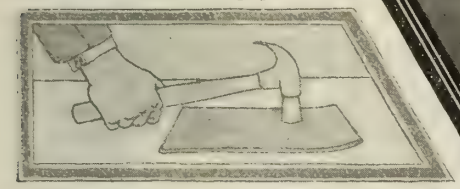
COPYRIGHT 1917, PRATT & LAMBERT - INC.

TEST IT WITH A HAMMER

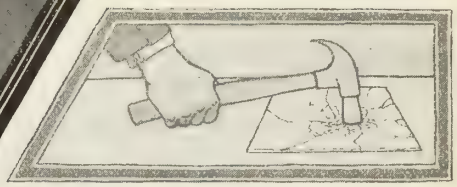
"You may dent the wood but the varnish won't crack"

Hammer a Sheet *of Rubber-* And What Happens?



NOTHING — your hammer leaves no impression — why? Because rubber is *elastic.* And it is the elasticity of "61" Floor Varnish that makes its life so long. Send for a sample panel. Test it yourself. Examine the dented wood and the unbroken varnish film. Then think of the heel-blows that your floor is called upon to endure, and you will understand why *"the varnish that can stand your hammer can best endure your heel."*

Hammer a Sheet *of Glass-* And What Happens?



WRECKAGE — the glass is shivered into a thousand pieces — why? Because glass is *brittle.* And this in a lesser degree is exactly what happens to countless floors finished with ordinary varnishes which crack, check and chip off. A good varnish doesn't break off — it wears off — *slowly;* but the costly oils and gums used in "61" preserve its toughness far longer than the cheap ingredients used in ordinary varnishes.

Demonstrating to the American Continent ONE VITAL VARNISH FACT

The Durability of

"61" FLOOR VARNISH

THE forceful picture shown above, with the two explanatory sketches that go with it, will be repeated more than

EIGHTEEN MILLION TIMES

as the keynote of the great Pratt & Lambert Advertising Campaign in the big national magazines this fall. This campaign will be backed up and hitched closely to your store by the most complete system of dealer co-operation we have ever offered in a single season. This massive advertising effort will mean *larger sales than ever before* for P&L Dealers. Your customer will want "61" Floor Varnish — the one that stands the "Hammer Test." This will help sell all other P&L Varnish Products. *Have you a stock of P&L Varnish Products on your shelves?*

TRADE MARK

CANADA PAINT

The paint that all Canadians should use — economical, durable, large covering capacity, and produces the most satisfactory results.

Bigger Business for Canada Paint Agents

is what we are striving for and what we will have. Every householder knows the Canada Paint products, and what they will do. See that you have a well-assorted stock to take care of the demand which is sure to come for all Canada Paint lines.

New Advertising Policy for More Sales

is at the back of the big demand for C.P. products this year. Let this big campaign be the means of bigger profits for you. Carry the line that is more than half sold, and with our new dealers' helps increased sales are assured.

If you are not taking advantage of this big campaign by being a C.P. Agent, it will pay you to get in line and join us. Write now for full particulars.

MAPLE LEAF
M L
FINISHES THAT ENDURE
QUALITY
PAINTS & VARNISHES

The BEST SERVICE TO YOUR TRADE

—whether your trade is with the millionaire—or with the humblest cottager no better service can be given than with

MAPLE LEAF Paints and Varnishes

The millionaire cannot buy better paint anywhere. The cottager cannot save money any surer way than with **Maple Leaf.**

A profitable paint department does not come from a label—or a trademark—or the name of the maker. It is the result of the quality and service that such things stand for.

Maple Leaf lines give equal service to all—for it protects and preserves against the same elements that all property is subject to.

—remember that maintained quality wins out in the long run.

Sell Handles that are Most in Demand

STILL'S

There are more of STILL'S HANDLES sold in Canada than any other make. What's the logical conclusion of this fact?—*they are the best.*

There's a Still Handle to meet every need: Axe, Pick, Sledge and Hammer Handles; Cant Hook and Peavie Handles.

There's nothing like selling the best of everything. Good profits in our handles, too.

Bring the FACTS to the Notice of Your Customers About—

Stephens' REGISTERED TRADE MARK Paints

Tell your customers of the folly using cheap, unreliable paints—paints that soon fade and wash off. Tell them how much more economical it is to pay a little more for a brand of paint that has won for itself a reputation for *quality* and *reliability*.

Tell your customers the facts about *Stephens' Paints*—how they have been giving satisfaction to the Western consumer for over 30 years and are still giving the best satisfaction in spite of hindrances put in the way of manufacturing by the war.

Stephens' Paints are essentially Western Canada paints, made to meet Western climatic conditions.

Dealers can't afford to sell a poor line of paints. It not only loses good paint customers but good hardware customers too when the paint fails to "make good."

If you haven't the Agency for Stephens' line let us hear from you. We give our agents splendid support in securing new business. Exclusive territory given.

Escaped from Germany

AN escaped prisoner tells the story of his fearful experiences in Germany in MACLEAN'S MAGAZINE for November; and gives a vivid picture of conditions in Germany as he saw them. He got out by way of Holland after appalling perils and hardships. In Holland, he was photographed, but so altered was he that his wife quite failed to recognize him in this photograph. Read this story of this Canadian soldier's escape. It is gripping stuff—a rare tale.

Canadian Finances After the War

WILL business in Canada collapse when peace comes? It may. What do the big men say? What do they know? What do you think? Are your opinions well informed? The subject is of the greatest possible importance, and you will get light and leading by reading the contribution of Col. John Bayne Maclean, who has taken the trouble to get the opinion of the biggest and most highly placed men in Canada to help him prepare his article.

Back from the Arctic

WILLIAM THOMPSON, representing the American Geographical Society, was this year in the Arctic Regions. He went to the delta of the Mackenzie River, and took many excellent pictures of the country and its Eskimo inhabitants. He makes the November MACLEAN'S the vehicle of many of his pictures and for an account of his journey. Read what this Arctic scientist has to tell us about a remote part of our land.

Slackers and Conscription

WHAT is your attitude towards the draft? You have positive opinions, of course. How do they square with Miss Laut's as they are expressed in her ringing article on Slackers in the November MACLEAN'S?

The Nation's Business

THIS is a new feature—a fearless, well-informed survey of national affairs. What we all want is an outspoken—but not vindictive—and clear-visioned presentation of factors and facts affecting our national, political and economic welfare.

Sketches of Trench Life

By Gunner McRitchie

MCRITCHIE was a cartoonist on a Western Canada daily before he went overseas. He has done a number of sketches of trench life "On the Spot," and these he has sent home, for publication in MACLEAN'S MAGAZINE. They're interesting and good.

The Late Sir Mortimer Clark

BEFORE he died, a few week ago, the late Sir Mortimer Clark, eminent jurist and an ex-Lieutenant-Governor of Ontario, wrote for MACLEAN'S an article on "Safeguarding Your Heirs." It has to do with the functions, service and safety of Trust Companies as executors of estates. This article by a man so distinguished, so cautious, so able, and so wise a counsellor, can be of first-rate value to every man perplexed with the problem of how his estate can be safely and prudently administered after he, the testator, has passed from this life.

A Complete Novelette

By Peter B. Kyne

HIS story in the November MACLEAN'S is a thunderingly good story of lumbermen and lumbering. Red blood is in this tale of business. R. M. Brinkerhoff illustrates it.

Short Story

By Ethel Watts Mumford

THE writer of this short story—the first of a delightful series by this author to appear in MACLEAN'S—is very well known among short story writers. Delicate fancy, wholesomeness, freshness and finished workmanship characterize all her work.

Short Story

By W. A. Fraser

A MIGHTILY well-written story of India—the kind that we all delight in; tense, bewildering, and lots of action. Fraser never wrote a better short story than this. Ben Ward illustrates it.

Hendryx and Oppenheim

SERIALISTS

THE Gun Brand," by Hendryx, comes to an end in the November issue. Oppenheim's greatest story, "The Pawns Count," is continued. Oppenheim's story is the biggest single feature ever secured by MACLEAN'S.

MACLEAN'S MAGAZINE

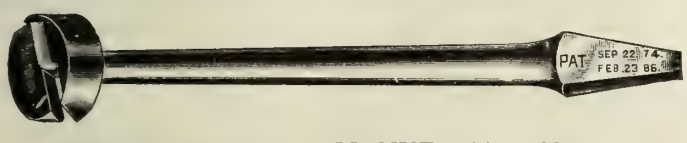
SPECIFY DOMINION BRAND

J. H. McCOMB, LIMITED

Manufacturers of all kinds of Building Paper, Pitch and Coal Tar

MONTREAL



THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly; packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Only through your jobber to-day.

COLONIAL WIRE MFG. CO., LIMITED

Christmas in 6 Weeks

Only 6 Weeks till Christmas Tree Time

How many homes have had their festivities brought to a sudden and disastrous ending by the Christmas tree catching fire?
Point out this fact to your customers and boost the

"FRANCO" Christmas Tree Outfit

It is a safe, sane, inexpensive way of lighting Christmas trees. Prettier than candles—no danger—no worry about fire.

The cost is small, your profits big.

If there is no electricity in the home a battery can be used with equal advantage.

FOR SALE—HARDWARE BUSINESS IN BEST town in Saskatchewan. Doing sixty thousand business with twenty thousand stock. About ten thousand will handle it; easy terms on balance. This is without a doubt the best buy in Canada to-day. Apply Box 500, Hardware and Metal.

Getting Results

A large firm in a Western Canada city recently advertised in Hardware and Metal Want Ad. Page for a man to fill a responsible position—result 21 replies. This indicates that the want ad. page is followed closely. The man YOU want to reach is reading this page.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

MISCELLANEOUS

ADDING TYPEWRITER WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314 Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fenson Elevator Co., Toronto.

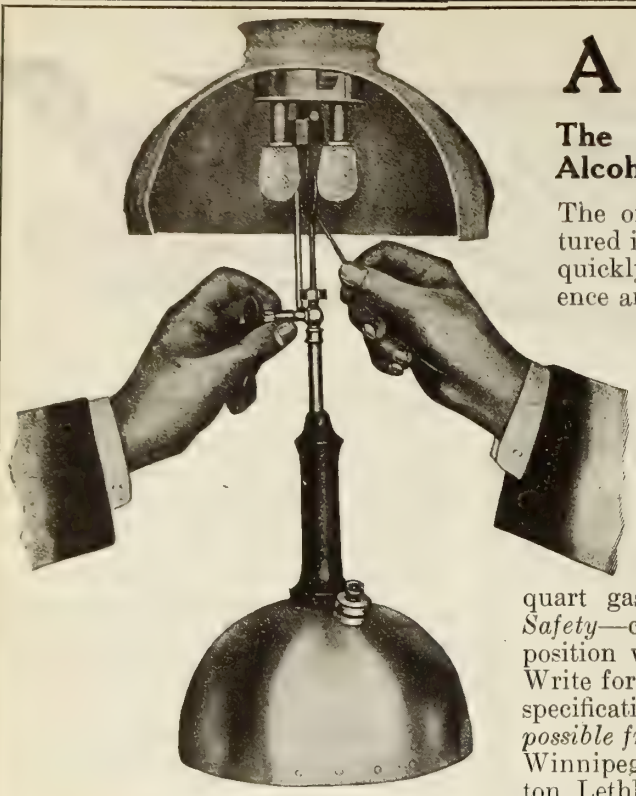
THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

WANT ADS.

If you want a buyer for your business, or have a situation to fill, or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

TRY IT OUT

A QUICK SELLER!



Here is how it is lighted

The Lamp that threw the Alcohol Torch into the discard.

The only Gasoline Lamp manufactured in Canada. This lamp will sell quickly because of its great convenience and economy.

Illustration on left shows the method of lighting the modern

"MATCH-O-LITE" LAMP

It needs no torch. Uses no alcohol. One match lights it. Burns for 15 hours on 1 quart gasoline. 300 candle power. *Safety*—can be held in upside down position without fear or danger.

Write for circular giving styles and full specifications—then *order as early as possible from* your nearest wholesaler in Winnipeg, Saskatoon, Calgary, Edmonton, Lethbridge or Vancouver and cover yourself for Fall and Winter requirements.

ONEIDA JUMP

LONG SPRING ACTION -SURE TO HOLD

The **single spring** now used in all sizes of Oneida Jump Traps offers many advantages over the old-fashioned double spring used in similarly patterned game traps.

It travels much higher on the jaws, giving longer spring action and far greater holding power. No breakage due to short spring action under heavy pressure—no weakness due to rivet holes.

A typical improvement in game trap lesign—coming, of course, from Trapping Headquarters with seventy years' experience behind it.

BUY NOW

And Be Sure of Your Supply

A BIG demand for hay tools next summer is inevitable. Almost every acre that will support a crop will be seeded. The Government has helped to solve the labor problem by supplying tractors for Fall ploughing. Crops next summer are certain to surpass all history; and there will be a demand for hay tools equally great.

The demand for hay tools has every year been larger than the year previous. Next summer's demand will far exceed that of the summer which has just passed.

There was a shortage of hay tools this summer. There will be a greater shortage next summer, because the increase in manufacture has not kept pace with the increase in crop production. The increased cost of malleable iron and the scarcity of it, as well as the scarcity of labor, prevent our increasing the production of this line as we would like. Many farmers will call at your store next summer for hay carriers and hay tool supplies. They cannot wait, for to wait means a partial loss of their crops; they must get their hay tracks, forks, pulleys, cars, rope, etc., from you or from someone else. Make sure of your supply so that you will not lose this trade. Make sure by ordering now.

If you wait, you may have to order the goods to come by express, and express charges and phone messages eat up a lot of profit.

The terms are July 1st, if for delivery not sooner than February 1st.

We will fill all orders in their turn. First come, first served. If you order now, your goods will be shipped before the goods of the dealer who puts off until the last moment.

Continued good times in Canada are essential to victory; these good times are dependent entirely upon Canadians.

The success of your business will be gauged by the degree of success of the

Victory Loan

Canada's prosperity depends upon keeping our factories and farmers busy with more orders. To enable the Allies to continue buying in Canada, we must loan them the money the same as the United States is doing. If we don't do this, their purchases will stop.

VICTORY BONDS

WHEN YOU BUY A BOND:- YOU MAKE AN INVESTMENT AS SAFE AS ANY IN THE WORLD—

A CANADIAN GOVERNMENT BOND THAT PAYS YOU FIRST-CLASS INTEREST.

A Nation Thrives Through the Thrift of Its People

A Victory Bond is a promise of the Dominion of Canada to pay a sum of money at a definite time.

Interest is paid on these bonds every six months.

Interest rate on these bonds 5½%, free of Dominion Government taxes.

Back of the Victory Loan promise to pay is all the strength, power and wealth of the Dominion of Canada.

THINK WHAT THAT MEANS!

A Victory Bond is a thing to strive for, to prize, to keep. It represents money, you can look at it, feel of it, know that you have it—just like a five dollar bill or a ten dollar bill, only better, because it brings you in AN INCOME and should you wish to turn it into money, it can be sold at any time.

Any bank or bond dealer will tell you how to subscribe—it is just as much their duty to tell you how as it is your duty to subscribe.

You can buy a $50 bond, or one of $100, $500, $1,000 or more.

YOU CAN PAY IN INSTALMENTS.

Will you lend your Country $50, or as much more as you are able to help finish the war and maintain Canada's prosperity.

Remember, you are not GIVING this money, you are lending it, SAVING it. It is going to work for you, bring you an income and be paid back to you by your Country.

These bonds are the safest investment you can make.

You also give your personal pledge that Canada is in this war to the end. You are, therefore, a patriotic citizen and a good business man when you

The "Hatch Garage Door Outfit"

Makes the most used part of the garage a constant source of pleasure instead of annoyance.

The smooth sliding rollers hold the doors in place, takes the bind off the hinges, and the doors open and close with exceptional ease.

The single hinged door allows access to the garage without disturbing the other two.

No trouble with Snow or **ice**, they in no way interfere with its working.

Don't wait. Be the first in your territory to show this outfit. There's a substantial profit in every sale.

Swing in to-day, write our Hanger Department for sales helps and Hanger Service.

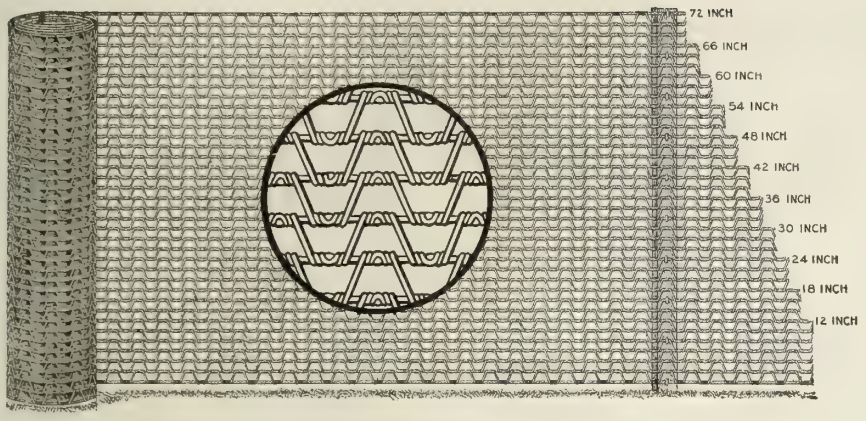
All Poultry Netting Made in the United States Is Not "U.S." Netting



A customer will occasionally report to us that he finds he has stocked an inferior grade of Poultry Netting instead of the genuine "U.S." kind that he had intended to purchase. A word of caution is therefore necessary.

Any form of Poultry Netting made in the United States may be referred to in general terms as a U.S. Netting, but it is only the product of The Indiana Steel & Wire Co., of Muncie, that is the original "U.S." Poultry Fence, with which the trade is familiar.

"U.S." Poultry Fence, the kind that stretches perfectly and stays stretched; looks better; lasts longer, and gives the maximum of all round general satisfaction, can only be made by the one firm in the United States — who control the patents and have the only equipment for properly making this type of fence at a marketable price.

Order through the authorized agents and **know** you are getting the right goods. The Muncie plant covers over twenty acres, is equipped with the latest and best machinery throughout, complete wire drawing, annealing and galvanizing outfits, special furnaces and every known appliance and labor-saving device used in the modern manufacture and treating of wire, and in addition the modern looms, which are patented, as well as many special and improved appliances and machines known only to the firm, which insures the high standard of product and enables the makers to guarantee satisfaction.

Exclusive Selling Agents for "U.S." Poultry Netting in Ontario, Quebec, Nova Scotia and New Brunswick.

STANDARDIZED CUTTING QUALITIES

Since the one purpose of a file is to cut, the toughness, regularity and sharpness of the teeth are all important.

A capable mechanic can positively "feel" these qualities in a "Famous Five" file.

The sharp, keen edged teeth arranged in uniform rows, plus its even balance, tells him at once it's a good, serviceable tool.

It is these qualities that have made "Famous Five" Files Standard Grade Tools everywhere.

That's why it pays to sell them.

Specify them when ordering

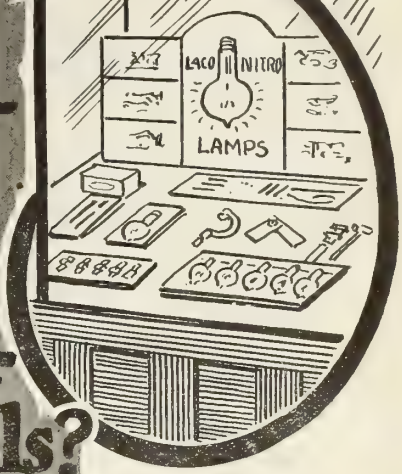
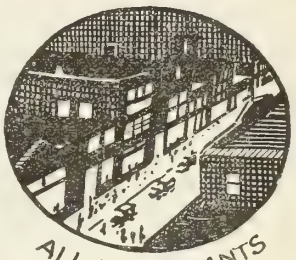
Are You Profiting by our Advertising Campaign in Canada's Leading Trade Journals?



PULP & PAPER MILL

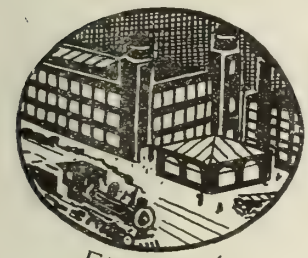


ALL MERCHANTS

Merchants and manufacturers throughout the Dominion of Canada are being reached each issue through the representative trade papers in Canada, by our advertising.

EVERY MANUFACTURER KNOWS there is a direct relation between proper lighting and profit. During the short fall and winter months every manufacturer and merchant realizes the necessity of proper lighting.

EVERY DEALER should take advantage of the demand for the light which will best meet this tremendous call for proper lighting.



FACTORY

THE WOOD WORKER

LACO NITRO LAMP "THE LIGHT THAT GIVES MORE LIGHT"

This light gives universal satisfaction. The repeat orders that you will get for it will prove its value to you. This is the opportune time to stock, sell and push the Laco Nitro Lamp.

Our present stock in Canada is ample to insure you that you can supply all demands.

POWER HOUSE

TEXTILE MILL

The Laco Nitro Lamp is the greatest development of the Tungsten Electric Bulb. It has a tungsten filament suspended in a nitrogen gas-filled bulb. It gives greater light per watt and has a longer life than any other type of lamp.

NOW is the time to act. Write your jobber, or to us.

Oil—More Oil

Every car that passes your door is using up oil. Do YOU want to replenish it?

All day long automobiles pass your door. Every one of these cars is using up oil.

Are you getting your share of this lubrication business?

Up-to-date hardware dealers who carry Gargoyle Mobiloils find that practically every car owner, whether local or transient, is a possible customer.

These hardware dealers have discovered that they can sell high-grade lubricants to motorists just as well as any other dealer.

Gargoyle Mobiloils have won high popularity through their sheer lubricating efficiency. Hundreds of thousands of motorists are using the grade of Gargoyle Mobiloils specified by the Chart of Recommendations for their cars.

Hardware dealers who display Gargoyle Mobiloils with the Chart of Recommendations are equipped to supply the oil that is scientifically correct for **every car on the road.**

The display of Gargoyle Mobiloils brings more than sales of a popular brand of oil. It establishes you as a lubrication expert, backed by the prestige of the Gargoyle Mobiloils Chart of Recommendations, for years the accepted standard for Correct Automobile Lubrication.

This Chart contains the name of practically every make and model of car, and specifies the correct grade of Gargoyle Mobiloils to be used in summer and winter.

Dealers who sell these oils use this Chart as their authority. No matter what car the customer owns, new or old, low-priced or expensive, the correct grade of Gargoyle Mobiloils is specified for each and every one.

GARGOYLE

Mobiloils

A grade for each type of motor

Alert dealers are getting their full share of lubricating oil business by using this Chart.

The four grades of Gargoyle Mobiloils, for gasoline engine lubrication, purified to remove free carbon, are:

Gargoyle Mobiloil "A" Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E" Gargoyle Mobiloil "Arctic"

Sold in one and 4-gallon cans, and in barrels and half-barrels.

Write to-day to Room 704, Imperial Oil Bldg., Toronto, for our booklet, "Correct Lubrication," containing Charts of Recommendations for all makes of automobiles, motorcycles, tractors and motorboat engines. We shall also be glad to send you a description of the Gargoyle Mobiloils line with price discounts to dealers.

The IMPERIAL OIL COMPANY Limited

BRANCHES IN ALL CITIES

Escaped from Germany

AN escaped prisoner tells the story of his fearful experiences in Germany in MACLEAN'S MAGAZINE for November; and gives a vivid picture of conditions in Germany as he saw them. He got out by way of Holland after appalling perils and hardships. In Holland, he was photographed, but so altered was he that his wife quite failed to recognize him in this photograph. Read this story of this Canadian soldier's escape. It is gripping stuff—a rare tale.

Canadian Finances After the War

WILL business in Canada collapse when peace comes? It may. What do the big men say? What do they know? What do you think? Are your opinions well informed? The subject is of the greatest possible importance, and you will get light and leading by reading the contribution of Col. John Bayne Maclean, who has taken the trouble to get the opinion of the biggest and most highly placed men in Canada to help him prepare his article.

Back from the Arctic

WILLIAM THOMPSON, representing the American Geographical Society, was this year in the Arctic Regions. He went to the delta of the Mackenzie River, and took many excellent pictures of the country and its Eskimo inhabitants. He makes the November MACLEAN'S the vehicle of many of his pictures and for an account of his journey. Read what this Arctic scientist has to tell us about a remote part of our land.

Slackers and Conscription

WHAT is your attitude towards the draft? You have positive opinions, of course. How do they square with Miss Laut's as they are expressed in her ringing article on Slackers in the November MACLEAN'S?

The Nation's Business

THIS is a new feature—a fearless, well-informed survey of national affairs. What we all want is an outspoken—but not vindictive—and clear-visioned presentation of factors and facts affecting our national, political and economic welfare.

Sketches of Trench Life

By Gunner McRitchie

MCRITCHIE was a cartoonist on a Western Canada daily before he went overseas. He has done a number of sketches of trench life "On the Spot," and these he has sent home, for publication in MACLEAN'S MAGAZINE. They're interesting and good.

The Late Sir Mortimer Clark

BEFORE he died, a few week ago, the late Sir Mortimer Clark, eminent jurist and an ex-Lieutenant-Governor of Ontario, wrote for MACLEAN'S an article on "Safeguarding Your Heirs." It has to do with the functions, service and safety of Trust Companies as executors of estates. This article by a man so distinguished, so cautious, so able, and so wise a counsellor, can be of first-rate value to every man perplexed with the problem of how his estate can be safely and prudently administered after he, the testator, has passed from this life.

A Complete Novelette

By Peter B. Kyne

HIS story in the November MACLEAN'S is a thunderingly good story of lumbermen and lumbering. Red blood is in this tale of business. R. M. Brinkerhoff illustrates it.

Short Story

By Ethel Watts Mumford

THE writer of this short story—the first of a delightful series by this author to appear in MACLEAN'S—is very well known among short story writers. Delicate fancy, wholesomeness, freshness and finished workmanship characterize all her work.

Short Story

By W. A. Fraser

A MIGHTILY well-written story of India—the kind that we all delight in; tense, bewildering, and lots of action. Fraser never wrote a better short story than this. Ben Ward illustrates it.

Hendryx and Oppenheim

SERIALISTS

THE Gun Brand," by Hendryx, comes to an end in the November issue. Oppenheim's greatest story, "The Pawns Count," is continued. Oppenheim's story is the biggest single feature ever secured by MACLEAN'S.

MACLEAN'S MAGAZINE

for November At All News Dealers **15c.**

Starrett Hack Saws are Unexcelled Just as Starrett Tools are Unexcelled

Mechanics come to your store to buy Starrett Tools because they know there are none finer, none more accurate, none more dependable. It's the same with

Starrett Hack Saws

Whether your customer wants these saws in large quantities for a big shop or in smaller numbers for occasional use, you can show him that he buys more than a good hack saw; he buys the right hack saw, the one best fitted for the job.

The right hack saw cuts quicker, thereby saving valuable time. It lasts longer—doesn't dull as quickly, doesn't break as easily—thereby saving money because fewer are required.

Our catalog No. 21MA describes the hack saw that is unexcelled and tells both you and your customer how to pick the number of saw that will do the best work on any given job.

How about the "Handy-man-about-the-house"?

Almost every home can use and really needs tools of some kind and this is a field which many dealers neglect to cultivate. But in many of these homes are potential amateur mechanics who would, if assisted and encouraged, develop into regular purchasers of not only a variety of tools, but also other hardware. Almost every man has some mechanical ability and we all like to see the results of our own skill. All that lots of them need is a start. **Cultivate this field.**

Encourage the "home-mechanic" in your newspaper advertising and window displays. Show good samples of home-made cabinet work. Suggest it in various ways that your local conditions offer and you will have opened up a field of large possibilities.

Sell them only high-grade tools. Enquire what kind of work they intend doing and give them the particular style suitable for that work. Many a customer has been lost because a clerk was not sufficiently interested in the customer's needs. For instance, no better saw is made than the DISSTON, but a 6 point hand saw is not suitable for cabinet work in hardwood. The amateur is consequently discouraged at the outset. See that he has the right quality and type of tools at the start and his enthusiasm will bring him back to add to his kit and equipment as his skill and requirements expand.

A fine foundation is a set of

DISSTON SAWS

"Will He Come Back For More?"

IF the answer is "Yes," then there's *profit* for you in selling razors and razor blades.

I want you to know why my razor blades *will* make your customers come back for more; why the man with the Penn Razor and Penn Honing Strop is glad to pass along the news of the quick, clean, smooth-and-easy shave that the Penn gives him every morning.

I get the best razor steel I can obtain. I'm glad to pay several times what ordinary steel would cost, because I know I'm getting my money's worth. I have my steel treated by the best process known.

But I realize that no blade will stay sharp very long without stropping or honing. So I have perfected a honing strop with a blade holder, so simple that *anybody* can get a fine new edge on his blade in *10 seconds*.

I have so much confidence in my razor and blades that I authorize dealers to refund the purchase price without question to any unsatisfied customer. And I refund to the dealer the full cash profit on the sale.

Isn't to-day a mighty good time to start selling the guaranteed, satisfaction-building Penn Razor and Honing Strop? Let me hear from you.

(Signed) A. C. Penn

Summer Comforts in Winter Driving

Looking at the Motorists' Needs—Twelve Months' Use of Car Desirable — Consider the Owner's Comfort First—The Car Must be Considered, Too—Requirements in Driving and Starting—The Once-in-a-while or Not-at-all Motorist—Hardwaremen to the Front—Some Suggestions.

IT is with some degree of foreboding that the average motorist looks to approaching winter as the time when he will have to give up that enjoyment which can only be derived behind the steering wheel of his car. And yet, should he give up driving his car? Should he store it away for the next four or five months? Are there not devices which take the chill out of the air, which enable him to get over the ground even if it is covered with snow?

Most certainly the man who wants to drive his car throughout the winter will welcome suggestions along the lines which he should follow to protect his car and to keep himself warm. Even the motorist who intends putting his car away for the winter months will want some ideas as to how his car may come through the months of idleness with the least possible deterioration. To both of these types, then, is the hardwareman directing his attention and with a splendid measure of success.

12 Months' Use of Car Desirable

To-day the average motorist wants to keep his car in operation twelve months in the year. This means that with the chill blasts of winter within hailing distance, the owner must make provision for heating his garage, for having his passengers comfortable by the installation of a heater and the use of special winter wraps. He must also be able to overcome any little trouble there may be in starting his car after it has been standing in the street a few hours and a few pointers on how to take care of the car in inclement weather would undoubtedly be appreciated.

Consider the Owner's Comfort First

The first thing which must concern the man in thinking of winter's approach is whether he can keep himself comfortable—consideration of the car is a matter of secondary importance. About the first question then to be considered is that of an enclosure such as a winter top, a new body with permanent roof or an open body with new curtains which will keep out the cold. In addition to this it is really essential to have a car heater of some type—otherwise the passengers must bundle themselves up to such an extent that they would feel uncomfortable. There are numerous types of heaters, but the type using exhaust gas is the cheapest to operate and gives splendid results. Care should be taken in the selection of the heater and one which can be easily dismantled and cleaned of any accumulation of carbon undoubtedly has its advantages.

The sale of driving gloves should be lively as these are needed whether the car is heated or not. There are also devices which are used for warming the steering wheel at points where the hands grip, these being operated in a great many cases by electricity taken from the storage battery or in the case of the Ford from the magneto.

At least one robe is essential and if the car is not heated it may be necessary to have two or more to keep comfortably warm. The owner of the car

Various methods of appealing to the motorist are employed and the above ad. in drawing attention to Automobile Robes is just another instance of how completely the hardwareman is covering this field.

usually wraps one robe around him and is satisfied but, in the case of women who remain in the car any length of time, more are required to attain the required degree of warmth.

As An Aid To Safe Driving

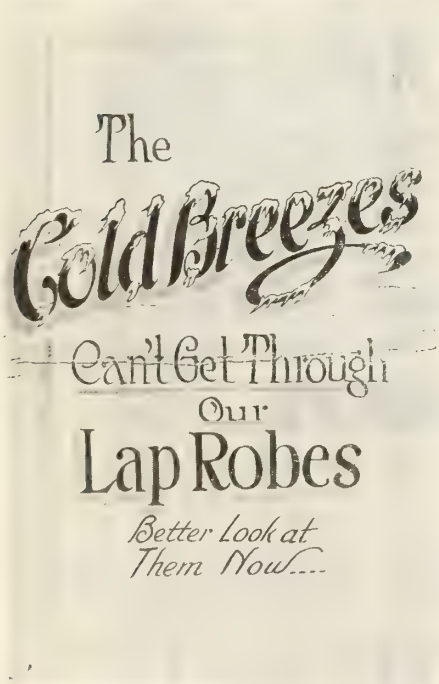
Care in winter driving is, of course, essential, but there should not be any more danger than at any other season of the year. One factor which aids materially in safe driving is the purchase of a windshield cleaner or making provision to have the shield free from frost and snowflakes. Snowflakes mottle the glass and interfere with a clear vision, while opening the shield lets in the cold and makes driving uncomfortable, so it is well to provide measures for keeping the shield clean.

The Car Must Be Considered Too

It is true that the motorist must look after his own comfort but there are degrees of safety, comfort, and pleasure which can only be measured in terms of proper consideration for the car itself. Perhaps the most important of these is the cooling system, and undoubtedly the first thought, on winter's approach, is given to securing an anti-freeze mixture.

Many owners have been in the habit of making their own solutions from alcohol, glycerine and water or perhaps alcohol and water but this trouble can now be avoided by the purchase of an anti-freeze mixture, already compounded and ready to pour into the water system. This should be a big seller as it costs practically the same as the ingredients mentioned above do and there is no trouble mixing same.

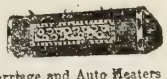
To keep the engine warm, a radiator and hood cover will do much towards



Drawing the attention of the motorist to the real genuine comfort possible in the use of the lap robes you sell should result in increased sales. A timely card is the one above.

Cold Weather Auto Accessories

Johnston's Freeze-Proof prevents frozen radiators; will not evaporate; will not rust or corrode metal; will not injure rubber ..$2.00 package



Carriage and Auto Heaters ..... $2.50 and $3.25

Storage Jacks, set of 4, $5.75

Weather Strip for doors, windshield and top ..... $1.50 set

Instrument Board Lights, bulbs of all kinds, etc.

Vacuum Bottles keep liquids hot for 24 hours or cold for 72 hours.

1-pint size ..... $1.25 and up

1-quart size ..... $3.50 and up

Tire Chains, all sizes.

Driving Robes $3.00

Ford Mats, best quality rubber $1.75

Radiator Covers, only 85c

Freezemeters 60c

FLASH LIGHTS.

Dry cells 40c

Complete stock of Ford repairs. When you overhaul your car refinish your car with Glidden's Auto Enamels.

Corning (white)—Canaphores for Your Headlights—Novral (yellow tint); all sizes.

Cowan's Colossal Hardware

THE STORE WITH A STOCK.

125-7 Dundas Street. Two phones: 3461-3462.

Making an appeal to the motorist such as the above directs the owners' attention towards the hardware store. The hardwareman is the logical one to sell auto accessories and it is well not to overlook the possibilities in an all-year-round sales program

this end as they are usually made to fit snugly.

One of the greatest sources of trouble in winter driving is that emanating from the batteries. It is absolutely necessary that the battery be kept up to charge all the time. A drop in the thermometer results in a reduction of the battery output. With the necessity for more current in starting due to a stiff engine and the greater use of lights, it would seem imperative that the battery be given every attention and charged about every three weeks to keep same up to charge.

Requirements in Driving and Starting

Driving through the winter presents a greater or less number of thrilling moments—as a matter of fact, real scares,—unless adequate tire chain equipment is used. Tire overshoes and covers can also be used effectively.

Starting a car after it has been standing outside for several hours nearly always presents difficulties unless a priming outfit of some nature is used. Authorities state that it does not matter particularly from which crude the fuel is obtained so long as its initial boiling point is low. Priming with the ordinary fuel means that the driver must use a great deal of it so that in the large quantity used there will be sufficient of low boiling point to give an explosion. There are many types of priming outfits sold and care should be exercised in their selection.

The question of starting from the garage in the morning does not present difficulties of great moment when a garage heater is used or a heater employed under the hood to keep the cooling water at a reasonably high temperature. Where these are not used the radiator should be drained at night to prevent injury to the engine and hot water used in the morning will facilitate starting.

The hardwareman should bear in mind that the starting problem in this country is a serious one where the thermometer reaches such low points and selection of all equipment should be made only after thorough investigation. In selling same too, every care should be taken to see that the motorist understands its proper use so that his difficulties will be minimized to a negligible quantity.

The Once-in-a-While or Not-at-all Motorist

There is also the motorist who uses his car only on rare occasions throughout the winter or not at all and to this man there are subjects to be covered which should react favorably on the hardware man. It might be well to consider the tires. These should be kept away from the floors by the use of tire-saving jacks. If the car will not be used until spring, it might be well to remove the tires on the rims and place them in a dark room. An anti-freeze solution should either be kept in the car or available for use when wanted.

To the motorist who puts his car away until spring it will be necessary that he drain the gasoline and water systems completely, leaving the caps off so that evaporation will dispose of any not drained. The oil in the engine, in the clutch, gearset and rear axle should not be drained, in fact it even is a good plan to fill the gearset and rear axle completely, so as to cover the gears entirely. The car should be given a thorough

With the coming of snow or for wet, slippery roads, the motorist will appreciate a hint such as above on how he may have "Full Control of His Car." It's not a difficult card to write.

The prospects of driving in zero weather are not so bleak when the motorist knows he can secure a foot warmer to keep him "Nice and Comfy." Make out a card to-day—the time is not far off.

cleaning removing all caked mud and dirt in corners and crevices. With the car clean, jack up all four wheels, remove the tires with rims, and take out the tubes. The latter should be partly inflated, just sufficient to give them normal shape.

The casings should be wiped clean. Both casings and tubes should be covered with cloth and placed in a dark room in the house. If desired the tubes may be inserted in the casings and stored in the same fashion. Parts which are likely to rust should be cleaned, dried and spread with cup grease or vaseline. The storage battery should be removed and advice obtained as to the best way to store, whether in a dry state, dismantled, or as it is. All terminals disconnected should be cleaned and spread with grease.

Hardwaremen to the Front—Some Suggestions

That the hardwareman realizes the possibilities in the sale of winter motor accessories is evidenced by the aggressive advertising campaign carried on in the newspapers and through window displays to effect sales.

Two newspaper ads reproduced here show the spirit of the hardware merchant and speak well for the adaptability of the merchant to the successful prosecution of motor accessory business. These may suggest to others how the appeal may be made to the motorist.

It has also been proved that in window displays and throughout the store, bright, attractive cards could be used very effectively. Three seasonable cards which "hit the mark" are shown and will assist retailers to design something suitable for their requirements. Action as indicated by the illustration of an automobile on two of these cards can be easily obtained by clipping from magazines which contain ads of auto manufacturers. The lettering will come easily after some practice. HARDWARE AND METAL has from time to time given lessons in card-writing which undoubtedly have proved of assistance to many retailers and their clerks, so that outlining suitable seasonable cards for winter auto accessories should not present any great difficulties.

Looking Over the Field of Action

There are then many lines on which the retailer can make a strong bid for winter motor accessory business and keep this department active during the next few months. Footwarmers, gauntlets, lap robes, wool caps, cooling system heaters, engine hood covers, anti-freeze solutions and chains indicate the range of lines to be sold and it must be remembered in advocating the twelve months' use of motor cars, you materially increase your sales of gasoline and lubricating oils in addition to further movement in tires, tubes, pumps, patches, etc.

To the motorist who puts his car away, there is a possible sale of tire-saving jacks in addition to a garage heating system which will enable the owner to do repair work on his car. Nothing is more trying than working on a car in cold surroundings and in selling a heating system the use of tools will be more in evidence which should result in increased business for this department.

Selling the motor car owner twelve months in the year would not seem an impossible proposition by any means. There is no reason why to-day the hardware merchant should lock up his gasoline pump and move his accessories to the basement because winter draws near. There is every reason to believe that activity in the auto accessory department may be maintained at a high level throughout the next few months and hardwaremen generally will be the ones to go after this business aggressively.

Curtailed Automobile Industry May Help Accessory Business

Agreement Reached Between Manufacturers and Government in United States Whereby Amount of Steel Used Will Be Only 40 Per Cent.—Accessory Men of Opinion That Such Measure Will Help Their Business.

THERE has recently been issued an order by the United States Government restricting the distribution of ferro-chrome steel available for ordinary commercial uses. This affects directly the automobile industry. The question naturally arises, "How will it affect the automobile accessory business?" Hardwaremen as extensive dealers in accessories are vitally interested.

Some of the leading wholesale accessory dealers are of the opinion that such a measure will help the accessory business in that old cars will more than ever be requisitioned. They will have to do longer service. This means a constant renewal to keep them in good shape and the accessories are the commodities that will be increased in the number of sales.

Supply of Steel Cut Down

The makers of pleasure cars in the United States and Canada will find the number of cars reduced that they are able to manufacture on account of the cutting down of supplies of steel. With the cutting of their allotments by the Priority Committee of the War Industries Board it will be impossible for them to maintain their present rate of outturn. Manufacturers of automobiles in the United States have heretofore agreed to accept the situation and to co-operate with the Government in a plan which may assist materially in furthering efforts to speed up the production of war materials. At a meeting of the manufacturers in Washington it was agreed to acquiesce in a plan to voluntarily cut down their respective production of pleasure cars and to utilize their plants for the manufacture of such war material as the Government may approve. The present consumption of steel in the manufacture of automobiles is said to be not more than 5 per cent. of the total steel production of the United States. It is proposed to reduce the number of pleasure cars gradually up to 40 per cent., but the United States Government authorities suggest that it may be necessary to reduce the output to 10 per cent. of the present outturn, and perhaps even to eliminate it entirely. If it is deemed necessary to apply drastic measures to the automobile industry it is generally supposed that the plants will be readjusted so far as necessary to turn out engines and machinery needed for war purposes. In this way employment would be found for all workers in the industry in some department of Government manufacturing endeavor. Already the Overland factory at Elmira, N.Y., is engaged on the manufacture of aeroplane engines and other factories are possibly engaged in the same sort of work.

Old Cars at a Premium

The restriction of the manufacture of cars in the United States will affect the

(Continued on page 41.)

"HOW TO MAKE FIGURE FACTS EARN PROFITS"

(Second address by Frank Stockdale.)

CONTINUING his series of lectures on problems of Retail Merchandizing, Frank Stockdale addressed the gathering of merchants and manufacturers on the subject "How to Make Figure Facts Earn Profits."

"I have found a great many stores," said Mr. Stockdale, "that are selling plenty of merchandise, wonderful stores in beauty and service, they are doing a good business, but they fail to come across with the thing most to be desired by a retail merchant—Profit.

"Most figure facts do not earn profits. Ninety per cent. of the figure facts in stores represented here do not earn profits. Some of you think you have splendid systems of accounting, but your systems only protect profits, they do not make profits. There is a difference between the nightwatchman and the man who works in the store, and there is a difference in the figure facts—records that protect profits and records that earn profits.

"Figures in connection with a business are very undesirable unless they tell the truth, the whole truth and nothing but the truth. A lot of men are misguided in figures. There are a lot of people using figures who conducted matters just as profitably before they got records into their business. They are misled by their figures. Some men's intuition, sense of management and sense of a movement of things has been a better guide than the figures they had. Incomplete figures will lead a man far astray, and the only way to talk intelligently about profits is by using figures.

THE DANGER OF NOT HAVING THE FACTS

"I know a store that ran along for four or five years making a nice profit for the owner. The sixth year they bought heavily for increased business, but they lost in the sixth year all they had made in the other five simply because they had been letting the business run along and the old goods were collecting all the time. When the crash came their profits went up in smoke. There are a lot of people in business who are in business because they are good salesmen and not because they are good managers. I have seen numerous cases where a man working for another man has become the star salesman. He decides he is the best salesman and starts out to run a business of his own. If he stops at salesmanship he is almost doomed to failure, because there is more to business to-day than being able to bring the mind of the customer to your way of thinking about merchandise. That is one of the absolutely essential things, but I have also known a lot of men to sell and not make any money. The management of the successful store must be based very largely on figures. There are certain things figures will do for a store. There is one class of people that complain more about competition than any other, they are the guessers. And the main reason they are complaining is because their competitors know a few things they don't know and among the things their competitors know are these: *'What lines are profit makers,' 'What lines are profit chokers,'*—these two lines are found in almost every store. 'What their constant expenses are,' 'How much it costs them to sell goods."

"There are two things a man does in the retail business, he carries goods and he sells goods. There is a distinction. I might fill the room with goods and not sell them, but that begins to cost money right away. And I might sell goods without carrying goods. Some people can sell goods without carrying them and some people carry them without selling.

"Other things the man who is up with his business knows are *'How much money is invested in stock.' 'Are stocks increasing faster than sales.' 'How many bills he has to pay,' 'Whether collections are keeping up with charges,' 'Progress and condition of the business.'*

"Lots of figures don't tell us whether we have been going forward or backward. That kind of record won't do a man much good. You have to know these facts sometimes, and the sooner the better.

"*'Don't forget markdowns.'* That should be taken into consideration when you mark your merchandise. The merchant wants to look ahead and make provision for the thing that in most cases is inevitable and know what his losses will be.

"*'Expenses forgotten are usually profits lost.'* I have known men who tack on a little percentage for 'incidentals' before adding their percentage of net profit. This indicates that the merchant knows there are mistakes.

"*'Rent and real estate.' 'Interest on capital invested in stock, fixtures, etc.—open accounts, outstanding accounts and money invested in working capital.' 'Salary for self and members of family.' 'Depreciation on goods and equipment.'* These are other items that must be considered.

"Depreciation varies and there is no reason for taking any definite percentage. If there is anything in records it is to tell us the truth, so merchants should be honest with themselves when they go to depreciate. Let the statements tell you the truth for some goods depreciate faster at one end than the other.

MARGIN NOT NECESSARILY PROFIT

"A clear understanding of the fundamental difference between margin and profit is necessary. One of the keenest merchants I have met told me he would like someone to write an article on 'margin of profit vs. margin for profit.' What he said was he would like for someone to write an article on 'an opportunity for profit, and actually getting the profit.' Margin is the opportunity for profit and also an opportunity for loss. Margin itself does not spell profit.

USE AND ABUSE OF PERCENTAGES

"The percentage pathway is lined with pitfalls. We find merchant after merchant tripping up on percentages. The following statement should be referred to when you are stuck about percentages:—*'Percentage is a sign of relationship.'*

"It has been said that competition these days sets the price, but you want to know if competition leaves a profit for you, and that is the reason for figuring.

"There is one absolutely essential thing to know whenever you start to use a percentage, and the first question is 'where did you get it?'

At this juncture a sample problem was worked out by Mr. Stockdale figuring a net profit on an article where margin, cost price and cost of doing business in the store were given. Mr. Stockdale indicated that there was a big difference in using the percentage on the cost or on the sale price, enough difference in fact to eat up an ordinary net profit.

"In one case," he said, "we have taken the margin on cost and in the other case we took the margin on cost and the cost of doing business on the sale. But the difference between the margin and cost of doing business is a percentage that means something. The kind of percentages to have are the ones that represent the same taken out of different figures and then when I compare percentages I compare the same kind of percentages. You are going to get to the place in your business where you will want to compare your figures. You cannot do this unless they are based on the same foundation. It should also be remembered that the percentage for clerk hire is based on sales not on the cost of the goods.

"Three essential things in business to be controlled are (*1*) *Cash.* (*2*) *Help,* and (*3*) *Merchandise.*

"The handling of cash and the balancing of the book at the end of the year with a balance in red ink is largely a matter of handling cash. It does not affect stocks and it does not affect the handling of people, because to handle people you cannot wait until the end of the year unless you expect to lose a lot of money on them. Special records for people and for stock should be kept. I would admonish every man never to go to the bother of keeping records in his business unless he has use for them. I am not advising any man to get a fact in his business which he cannot use, and you will not find it hard to get. The trouble is people do not see the use of facts. There are more nice trial balances filed away in the safe than there are facts placed on the desk which are used when the merchant goes to advertise, mark up goods or talk to a traveling salesman. That is the essential thing in records, to be able to use them in your business.

ANTE-MORTEM NOT POST-MORTEM FACTS

"What we need in figure facts is diagnosis instead of post-mortems. I want to know what is happening in my business while it is happening, or as soon after as possible and not what did happen. The method of diagnosis is also changing. In olden days they used to diagnose by the use of antiquated methods. The old time storekeeper would look at the sales and if they were all right everything was all right. The modern retailer diagnoses by knowing his turnover, expense and sales. It is only necessary to select one expense to know if you are doing all right, and that expense is *Rent.* The landlord is the man who keeps up with you because you are in competition with each other. The rent you pay depends on the turnover you get."

Referring back to the problem of figuring the net profit when the expense of doing business in the store was given, Mr. Stockdale emphasized the point that *"average percentages do not apply to specific cases"* and that therefore the cost of doing business in the store was not the figure to be used in selling an article in the store." He continued:

"The expense of carrying and selling a certain article is not the same on all articles.

DEPARTMENTALIZING THE STORE

"I have known a number of merchants to departmentalize their stores and to establish departments in departments. That is what the chain stores are doing, and that is where you have to find out where you are making money and where you are losing money. In departmentalizing the store stock records are as valuable as expense records."

At this point Mr. Stockdale illustrated the case of a department store divided into a number of separate departments, some of which made money while others lost money. He struck out departments which equalled each other i.e., one showing a loss equal to the other's profit, and thereby illustrated that the profit making extent of the store resolved itself down to about one-quarter its original size.

"The same thing applies to lines as to departments. You cannot apply average percentages to specific lines or departments and know what you are doing," said Mr. Stockdale.

"The reason figures do not earn profits is because we get tangled on percentages or apply averages to specific cases. Manufacturers of advertised products are having the time of their lives because the average merchant is applying average figures to things that do not come under the average.

"One of the big reasons why average percentages do not apply to specific lines is because turnover on various lines varies greatly.

In the discussion which followed the address the question was asked "What distinction is there between turnover and sales."

In answer, Mr. Stockdale stated that turnover as applied to sales was using the term turnover out of its proper place. We are using two terms, one is *turnover* and the other is *volume,"* said Mr. Stockdale. "We want something to express the speed of the movement of the merchandise and we have reserved 'turnover' for that purpose."

Replying to a question as to average percentage allowance for rent in specialty stores, Mr. Stockdale stated that there was a great dearth of these figures, but that the average figure of rent in an average city is 3 per cent. for clothing stores, and varying according to the class of the store.

"One man rents a location where he has to pay a larger rent than another man. Increased sales means increased turnover and there lies the relation of turnover to rent."

U.S. Overflow War Business for Canada

Many Opportunities For Canadian Firms to Pick up Overflow U.S. War Business—Such Assistance as They Are Prepared to Render Will be Welcomed.

EVIDENCE of the myriad activities of the United States war preparation and effort permeates every phase of the domestic, social, and business life of the Capital. This was quite noticeable to the representative of HARDWARE AND METAL who is in Washington this week.

The army, navy, shipping, food, and trade and commerce departments, with largely augmented staffs, are operating at high pressure, the various executives spending long hours at their offices so that the mass of routine and detail inseparable from a war undertaking so gigantic and urgent shall not fail each day to be effectively and expeditiously dealt with, and the structure of the nation's big fighting machine be sound and substantial from the foundation up.

Merchant Shipbuilding

Roughly speaking, over half a hundred plants are now engaged on the construction of wood and steel vessels, the former some 280 feet long, of 3,500 tons deadweight capacity, and the latter of from 5,000 to 10,000 tons deadweight capacity. These vessels have been ordered by and are being built under the supervision of the Emergency Fleet Corporation, an adjunct of the U. S. Shipping Board, and while the exact number is for obvious reasons here withheld, some idea may be had of the scope of the enterprise when we state that some firms have well-nigh a score of ships under contract.

Very satisfactory progress is being made with construction, notwithstanding the labor scarcity, and when plans now being developed become operative to relieve the latter, a much accelerated output may be looked for. The submarine menace is without doubt more fully appreciated in the United States than it is in Canada, hence the contrast between the steps being taken to combat it by the former as compared with the latter.

Many American shipyards are engaged on vessel construction to order other than the Shipping Board; in a word, capacity contracts for several years to come were booked by them before that body came into existence. A number of these are wholly engaged on warship construction, while others again are turning out ocean-going freighters. These latter have, of course, been commandeered by the Board, so that as each vessel is completed she automatically comes under its supervision and direction relative to service. Official announcement is shortly expected to the effect that 400,000 tons of Japanese shipping will be transferred to the Atlantic service, on Shipping Board charter, in return for which the embargo on American steel to Japan will be lifted, an added proviso being that a certain percentage of new Japanese construction to be undertaken shall come under charter also to the U. S. Shipping Board for Atlantic service.

Of the vessel contracts already placed by the Board, builders in most cases are altogether responsible for their completion in every respect. In other instances, the Board have placed the propelling, engine room auxiliary, and ship deck machinery contracts separate from those of the hulls. Canadian metal-working plants interested in supplying such equipment should, therefore, not only communicate with individual builders, whose names have been made available to us, but should get directly in touch as well with the U. S. Shipping Board, 1319F, N.W., Washington, D.C., stating what they are prepared to furnish, thereby placing themselves in line to receive specifications of equipment and materials for vessel construction now in progress, and for that to be given out from time to time of a supplementary nature. We are in a position to state that such action will be appreciated by the Board, and where embargoes such as meantime exist militate against contract acceptance, the influence and effort of the Board will be directed towards release of the necessary material.

The U. S. Navy Department have been large purchasers in the Canadian market of late, securing heavy socks, blankets, gloves, mitts, etc., for officers and seamen. Optical and nautical apparatus of every description, also anchors, chain, etc., are lines of requirement carrying more or less appeal to Canadian manufacturers. Correspondence should be addressed Navy Department, Bureau of Supplies and Accounts, Washington, D.C., requesting to be put on mailing list to receive advance notices of specifications to be given out.

Munitions

Contracts, we understand, were recently placed in Canada on behalf of the U. S. Army Department for shell closely approximating in size that of the 6-inch British projectile, and satisfactory progress has been made with negotiations towards the placing of a large order of smaller size shell, for the production of which Canadian experience of the past two and a half years on a somewhat similar shell admirably fits in. Negotiations are being conducted with the U. S. authorities, through the joint instrumentality of the British Munitions Ministry, Munsey Building, Washington, D.C., and the Imperial Munitions Board, Ottawa, Mr. Lloyd Harris, of Toronto, representing the latter at the American Capital. Mr. Harris was in Washington for a few hours yesterday in connection with the matter.

The immediate outlook here is that Canadian firms have many opportunities to pick up overflow United States war business; and that such assistance as they are prepared to render along that line will be welcomed.

Accessories of Steel No Higher

Canvass of Situation by Purchasing Agent of Wholesale House Shows a Firmer Trend to Cotton Goods, But Steadiness in Price For Next Year's Delivery For Goods Made From Steel.

THERE is every indication that the price of automobile accessories manufactured from steel will be no higher in price than those prevailing for the past season. There is strong indication, however, that cotton fabric goods, such as tire covers, seat covers, tire reliners, and blow-out patches, may be higher in price. A. M. Bottcher, purchasing agent for Hyslop Bros., dealers in automobile accessories, Toronto, has recently returned from a purchasing trip to the United States during the course of which he visited manufacturers in Detroit, Chicago, New York, Philadelphia and other points. From his conversations with the various manufacturers and by reason of orders that he was able to place for steel goods he is of the opinion that there is no possibility of advance so far as next season's accessories are concerned. With cotton fabric goods the case is different. There is great uncertainty in the raw cotton market and manufacturers will only book orders for these goods subject to price at date of shipment.

Ready To Take Orders Freely

During the course of an interview with HARDWARE AND METAL Mr. Bottcher said: "There is every indication that accessories made of steel will not be higher in price for next season. Manufacturers in the United States are ready to book freely at present prices for delivery up to March and April of next year. This indicates their confidence in present market values. No cuts in price were evident in any line so far as I was able to observe, as prices are holding stationary in this respect. While there have been lower prices established by the United States Government on certain classes of iron and steel, these lower prices will have no bearing on the steel that enters into the manufacture of accessories for next season. Industries other than those engaged in war material can only get steel after the Government's needs are supplied. This steel is at a premium and commands good prices for domestic manufacture. The fact that manufacturers are ready to book

(Continued on page 38.)

New Departure in Auto Filling Stations

Edmonton Firm Install Complete Plant for Sale of Gas and Lubricating Oils — Ideal Location Secured—Glass-enclosed Cabinet Effective — Delivery of Gas Through Compression—Chart Used in Selling Lubricating Oils —One Man in Charge All the Time—700 Gallons Sold in One Day.

GASOLINE service stations have been generally adopted by hardware merchants throughout the country, but to the Northern Hardware Co. of Edmonton, (West End Branch), credit must be given for a departure from ordinary service pump and system which has permitted them to really make a department out of their gasoline and lubricating oil business under the constant charge of one man.

Ideal Location Secured

From the accompanying photograph it will be seen that attention is secured through the use of a large sign above the side windows of the store and directed to the auto filling station at the rear. This is very conveniently located, being immediately accessible from two streets. This permits the firm to supply gasoline, oil and air without in any way causing confusion or disturbing the regular running of the store.

Auto Station Result of Owner's Plans

The demand for gasoline grew so rapidly that it soon became apparent the old form of delivery was obsolete and, with the large quantities being handled, it was imperative that something new and larger in the way of storage should be secured. Thus, it devolved upon Mr. Scott, president of the company, to do a little inventing on his own part.

The consideration of storage resulted in the installation of a tank with a capacity of 500 gallons. The rapid growth of this business makes this somewhat small now. The tank is placed beneath the sidewalk where it can be conveniently filled from the oil company's wagon, and inspection for leaks easily made.

Everything the motorist needs in lubricating oils as well as his supply of gas can be obtained from this "station" of the Northern Hardware Co., Edmonton. Having the different grades of oil sampled under glass is an idea which could be developed by many hardware firms to their advantage. Apart from its attractiveness it shows the motorist that the hardware store is catering to the specific needs of his car. Numbers on lubricating oil tanks indicate the special grade of oil.

Glass-Enclosed Cabinet Effective

The glass-enclosed cabinet shown in the photograph on this page makes a very attractive setting for lubricating oils and gas. The cabinet is about seven feet high, four feet wide and thirty inches deep. It stands just off the sidewalk, with a platform built around three sides and the effect is splendid.

Delivery of Gas Through Compression

The interesting part of the delivery of gasoline is that it is accomplished through air compression. In the basement of the store an electric motor is connected with the two auxiliary tanks in the cabinet, by which means two cars may be filled at one time. These tanks are on either side of the lubricating oil containers, and are filled automatically with gasoline. Each is supplied with a gauge showing the customer just what quantity is being delivered to him. On being discharged, they again become automatically filled from the large storage tank below. A gauge indicated that the pressure in this is kept at about 150 pounds.

Chart Used in Selling Lubricating Oil

Six cylindrical containers hold the various grades of lubricating oils which are suitable for all makes of cars. For the benefit of car owners a chart is used to show just what kind of oil each car should be supplied with and what is required is drawn from one of the special containers in measures which are kept in a small cupboard beneath the main part of the case.

One Man to Handle This Business

So great has the demand for gasoline

(Continued on page 41.)

Outside front and side views of the west end branch of the Northern Hardware Co. store at Edmonton. It will be noted that the windows carry a display of sporting goods, embracing bicycles and auto accessories. The big sign above the side windows directs attention to the auto filling station, which is the subject of the article above. The big display of auto accessories as shown in the side window speaks well for the aggressive tactics adopted by this firm to secure the motorists' trade.

COUNTING to-day, there remain only twelve more days in which to buy Victory Bonds.

* * *

THERE is no question about which is the greater asset—an old account which bears no interest or a Victory Bond bearing 5½ per cent.

* * *

COLLECT and invest—two mighty important words just now. Collect those old accounts—invest the proceeds in Victory Bonds.

* * *

THE second Stockdale lecture, "How to Make Figure Facts Earn Profits" appears in this issue of HARDWARE AND METAL. Some very good points on "Figures" are brought out. The third lecture will appear in next week's issue.

* * *

CURTAILING the output of pleasure cars means increased sales of auto accessories. There's a message to every hardwareman in the situation which is developing in the United States, and which will undoubtedly affect Canada, as regards shutting off on the output of motor cars for pleasure driving. Auto accessories will move with greater freedom than ever before. It is not too early to plan for this increased business.

NO BREAK IN PROSPERITY YET

THE announcement a month or so ago of the discontinuance of British war orders was the signal for some rather doleful forecasts. There were merchants and dealers, who saw the bottom dropping out of everything, the business sustained on war orders largely gone to pieces, and a general condition of blue ruin about to dawn.

That time is in the distance now and as yet there has been no falling off in prosperity, and now there comes the announcement that a fifty million dollar order has dropped in Canada's lap, and there are hints that this is only the beginning. Whatever the ultimate result, and we can see no very dark future for this country, there is an assured prosperity for the present stretching over at least a year. The war business that has made Canada prosperous during the past years is once more headed this way, and that without any difficult problem of financing to be faced. This is no time to feel downcast.

AN INVESTMENT BETTER THAN OLD ACCOUNTS

CANADA'S Victory Loan Campaign started on Monday of this week and will continue until the first of December. There are many ways in which to view the demand now being made. Isn't there a crying need from your country for every dollar on which you can lay your hands? Are you going to let the plea which rings from across the water from our soldier boys who are daily sacrificing more than mere money can buy go unheeded? Consulting your own judgment, isn't it good business on your part to subscribe to the limit of your ability?

There are many old accounts which you have been intending to collect for the past few months—maybe years—can you imagine a more opportune time to solicit payment of these (and in no uncertain terms) than the present? Every cent which you collect from these old accounts is really found money. As such, placing the entire amounts in Victory Bonds will not be missed and think, one month after you are required to pay for your bonds in full, you are paid a full six months' interest on the total amount you subscribe. You will be getting real dollars and cents interest on money which you had almost given up hope of ever receiving.

And whom do you benefit?—none more than those who pay. You will find on observation that many of those owing you accounts have actually avoided you and will do so until they can face you with a clear conscience. Assist them to a real peace of mind—reinstate them on your list of active customers by securing payment of those old amounts—you will find that they will appreciate your taking a firm stand in the matter of settlement. If it can't be done in a nice way, there are methods by which all can be made to pay. The country, our soldiers, your business all call to you—they expect liberal response. Have you bought a Victory Bond yet? Buy another and another and another!

DECREASE IN PLEASURE CARS

SOME apprehension is felt in automobile circles at the announcement of the United States Government that alloy steel would likely be largely withheld. Discussion of the subject indicates that the output of factories will be curtailed considerably as far as pleasure cars are concerned, the auto manufac-

turers being expected to devote their plants largely to the supplying of aeroplane engines, etc., which class as Government needs.

The decrease in production will mean that cars which ordinarily would be termed second-hand and turned in for new ones, will remain largely in the possession of their present owners. This should present a splendid opportunity for the development of the accessory end of the business and hardwaremen should take note to prepare in a large way for the increased demands which will be made upon them.

Larger sums will be expended by those who ordinarily would turn their cars in for new ones than by the usual purchaser of a second-hand car, and an appeal that will reach the present owner should result in greatly increased sales of all lines of accessories.

MORE STEEL PRICES FIXED

THE wheels of government action continue to move and the situation in the United States as a result of the latest announcement of agreed prices on an additional line of steel and iron products has been cleared considerably. Prices quoted affect the finished product largely and would appear to be in line with the basis previously determined.

Steel requirements due to the war are becoming known more definitely and large orders for shell steel, plates, etc., have already been placed. Certain manufacturers, it would appear, cannot depend on steel supplies and this will, of course, have anything but a good effect.

The action of the Government in announcing that alloy steel will be largely withheld from the automobile industry has done much to disturb this industry for there is, as yet, no indication of what the Government needs in such steel will be.

It is expected that prices on products into which rolled steel enters will be adjusted to fall in line with the schedules which have already been made by steel manufacturers. This will affect such items as bolts and nuts, and a diversity of opinion seems to exist among producers in reference to the changes, which will undoubtedly be watched carefully by government officials.

Altogether, it may be said that the situation is assuming more natural proportions. This is evident in freer buying of pig-iron, several transactions covering the first six months of 1918 having been made at the established prices. Production of pig-iron also showed an increase in October over September, and prospects are that November will exceed the October record.

THE RESULT OF LOWER PARCEL POST RATES

IN A recent edition of a Toronto newspaper there appears an article urging the idea that the curtailment of parcel post charges would go a long way toward reducing the cost of living. It is an interesting item, made doubly so by the knowledge that a large department store owns a considerable interest in this newspaper. It is not hard to see that such an organization would look with great favor on any lessening in the parcel post rates. The parcel post system was one of the greatest boons that ever fell into the lap of the mail order houses. It provides them with an easy and efficient means of distributing their goods at the minimum of expense. But to argue that it would have any effect in lowering the cost of living can only evidence a lack of knowledge of the situation. What food product is there that could be economically sent by parcel post? Even supposing that the cost of this service was to be cut in half, what possible advantage could it be to the producer? Could you post any of the products of the farm from the source to the consumer at anything but a materially increased cost? As a matter of fact, food products do not in any way lend themselves to this scheme. No matter what changes were made in the parcel post charges there would be no material increase in the movement of goods toward the cities as a result. There would, however, be a very material increase in the movement of goods away from the cities. The mail order houses would see to that. This is the only result that would be gained, and the wildest stretch of the imagination cannot see in this any likelihood of a decreased cost of living.

THE TRADE ON TRIAL

THE New York *Journal of Commerce,* dealing with the different price regulation schemes sees in them the evidence that the wholesaler is being placed on trial. "Either he must plead," says this journal, "that he is a speculator or that he is a functional link in the distributive chain. Manifestly, he cannot be both. If the public finds it necessary to take him at his word as a speculator, he is in grave danger of being eliminated by force as quite unnecessary. If he accepts service as a public utility, paid a fair price for his work, he will probably remain. The issue is quite clear and of vital importance. The wholesaler must back the Government and make the best of emergency regulations."

Unquestionably the trade is facing conditions that have never been faced before, and their attitude to business must be changed to meet these new conditions. Every man has a right to a fair profit for his labor, but in these times it is the part of wisdom and the part of patriotism to see that a reasonable basis of profit is not overstepped. And this is as true for the retailer as it is for the wholesaler. Unquestionably the food handlers are on trial in these days. We do not believe that there is any degree of justice in this attitude of the public, but it is the fact nevertheless. The only defence that the trade can make is to give the maximum of service at the lowest profit that is consistent with a sound and safe business.

Briggs, of Dunlop Tire Fame

Career of a Man With a Wide Business Experience — From Junior in Printing Plant to Important Position With Large Manufacturing Company.

EDITOR'S NOTE: *In a recent issue of "Economic Advertising" there appeared a sketch of Austin Addison Briggs, of the Dunlop Tire & Rubber Goods Co. Mr. Briggs was at one time associated with* HARDWARE AND METAL, *as a writer of special articles on advertising and also as the ad. man for a number of manufacturers. Mr. Briggs has a wide circle of friends in the Canadian hardware trade. Under the title of "Briggs of Dunlop Tire, a man of many-sided experience," the article appeared as follows:—*

ON the surface there is but the slenderest kind of a link between printing and rubber—unless one considers the marked resiliency of the printer most noticeable when customers try to beat him down. Be that as it may, as Carlyle was wont to say, it was from a compositor's frame that the subject of our sketch, Austin Addison Briggs, gravitated through successive stages of development to the advertising manager's chair in one of the largest rubber corporations on the continent. From the beginning his career has been broad in its scope, and rich in variety.

As a lad of about fourteen, studying the history and habitat of the type louse, he caught a mild case of the writer's itch, and took a six months' course as a reporter on a Toronto morning newspaper. This he did in addition to putting in ten hours a day at the case and with the proofreader. What time he had for sleep we know not; unless possibly he took cat naps at political ward meetings and borrowed later a friendly scribe's notes in order to save the city editor's feelings. But from what we know of the ability of Briggs to stay on the job, we venture the assertion that he didn't sleep much. However, he presumably found the double life too strenuous, even for his indefatigable spirit, for at nineteen he became a full-fledged proofreader and assistant superintendent of a printing office.

His first ad-writing experience was obtained in turning out advertising matter for the publishing company owning the printing office. About this time he wrote a —— novel, the subject of which is not revealed. It was natural, perhaps, that he should have drifted into the trade newspaper field; for in the copy service department in the office of a well-known Canadian publisher he found a freer outlet for his literary ability. There he wrote advertisements for manufacturers in addition to special articles on dealer publicity. Next he went into the publishing business on his own account, and came out, as he says, "a sad Budweiser man." A brief experience followed as trade paper editor, after which he migrated to the picturesque environs of London, when, in 1907, he was appointed advertising manager for the McClary Stove Co. While here he filled his spare hours in writing for *Printer's Ink, Judicious Advertising, System,* and *Economic Advertising,* of which the first issue contains a story by him. After two years in London, he picked up his grip and travelled to Montreal, where he became copy writer and promotion man for an advertising agency. But the call of the West, now growing louder and louder, proved irresistible at last, and he finally landed out on the prairie wheat fields as advertising manager of a daily newspaper. This step proved but a temporary stop to the wanderlust, for he afterwards joined the J. K. Cornwall Expedition on a ten thousand mile "hike," of which, as the representative of the *World To-day,* he wrote a series of descriptive articles.

AUSTIN ADDISON BRIGGS

Having grown tired of wandering over the face of the globe, his curiosity for strange scenes satisfied, he finally put his now well-worn suitcase in the corner of the Toronto office of the Dunlop Tire Co., took off his coat, and settled down to work as advertising manager. This was in 1910, and up to the time of going to press he was still there.

"I may have been a roamer," said Mr. Briggs, "no doubt I was, but a great many of these changes were made to get experience from every phase of advertising work. The jobs were changed, but never the business. And, throughout, you'll find that practically everything I did was pretty good preparation for the job I have now."

Last fall Mr. Briggs made an extensive trip across the continent, going as far north as Alaska and covering altogether a distance of more than 10,000 miles. It was during a more recent trip this summer that the representative of the *Daily Telegraph,* St. John, N.B., described Mr. Briggs as "a type of keen-eyed, wideawake Canadian, whose close observations on the prevailing conditions in each place visited show him to be a most energetic member of his fraternity." And since this is a pretty fair portrait of our subject, we'll let it go at that. His outstanding success in his present job of blowing up Dunlop tires would seem to indicate that he has indeed found his work; for as a result of their skilful and persistent exploitation Dunlop traction treads now make tracks across the continent, just as Mr. Briggs himself used to do.

ACCESSORIES OF STEEL NO HIGHER

(Continued from page 34.)

orders freely at present prices for delivery up to spring of next year is sufficient guarantee that prices will hold fairly stationary for next season's trade. If the cost is not advanced to the wholesalers he in turn finds it unnecessary to advance his price to the retail trade. Industry in the United States has settled down to a fairly permanent and sound basis, following the entrance of the country into the war. In this respect they have possibly secured their sea legs sooner than Canada did when the war broke. There is no hesitancy about taking business for future shipment on the part of United States manufacturers. Industries in that country are now facing the problem of a short labor supply in every branch of industry. In the raising of the United States army no partiality has been shown and the selective draft has fallen upon executive positions, clerical positions and the ranks of the workers with impartial hand. There has been a general curtailment of efficient help through the raising of their army, the same as happened in Canada. There was this difference in Canada, however, that, as a result of the voluntary system of enlistment, the drain, perhaps, did not fall equally on all branches of the business organization.

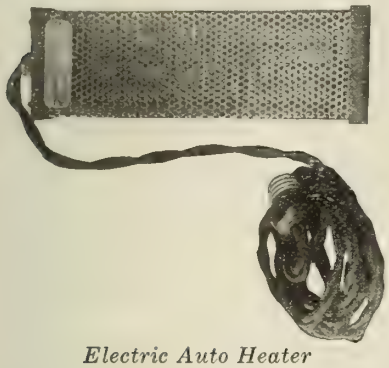
"The steadiness in conditions of manufactured steel accessories, however, is not present when it comes to cotton fabric goods such as tire covers, seat covers, tire reliners, blowout patches and, perhaps, tires. The raw cotton market is a very uncertain quantity at present and manufacturers are governing themselves accordingly. In consequence they will book orders only on the basis of price at date of shipment. This is an indication that in the opinion of the makers the market in these commodities may fluctuate with sudden rapidity, following changes in the raw cotton market. There are very few who will venture an opinion as to the probable trend of the raw cotton market. It is a hazardous guess for even the best-informed. With raw cotton quoted at 29.05c per pound for spot middling uplands there are those who venture the opinion that the top of the market has not been reached. As long as raw cotton continues to climb the manufactured products will necessarily have to follow upward," concluded Mr. Bottcher.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

AUTOMOBILE HEATER

A serviceable electric heater for keeping automobile engines and the water in the radiator warm in the coldest weather has been put on the market by the Canadian General Electric Company, Ltd. To heat a garage by stove or by steam is expensive and is said to waste heat; but this little electric heater is claimed to deliver the heat where it is required—inside the hood of the automobile. The heater consumes only 200 watts and is said to cost about ½ a cent per hour to operate. It is claimed to be compact in shape and therefore allows of being placed conveniently wherever the heat is desired. The Canadian General Electric Heater is claimed to give a strong uniform heat with no danger of fire and



Electric Auto Heater

to therefore eliminate the dangers of a cold garage and also the dangers of using a flame around automobiles. The heater is furnished complete with 8 ft. of cord and attachment plug, ready for use on 110 volt circuit direct or alternating current.

MECHANICAL FAN BELT

Mechanical Belt Company, 1202 Frederick Ave., St. Joseph, Mo., is placing on the market the Crowe Mechanical Fan Belt for Ford cars which is claimed to meet the demand for a belt which is not affected by conditions under which the Ford fan belt operates. The Crowe belt is a combination of a leather friction surface and a chain background. There are three parts to each link and by simply sliding out any leather section the chain opens—closed when leather section is replaced, thus making it possible to add or remove any number of links as required. No metal is said to touch the pulleys. The steel chain background is claimed to insure a strength that will endure any kind of service, and the blocks of oak sole leather will furnish a friction surface of extraordinary durability. The combination is claimed to make the

Crowe Mechanical Fan Belt

belt impervious to oil, heat, dirt or water and the construction gives the belt remarkable gripping power. It is also claimed to keep the motor cooler by keeping the cooling fan revolving at maximum speed. The belt is guaranteed for 15,000 miles and sells for $1.10 in the United States.

THE HANDY TERMINAL

A. T. Francis, President of Francis-Rand Co. of Cleveland, Ohio, has placed on the market a terminal that is claimed to eliminate all terminal troubles. The Handy terminal is a cable terminal and spark plug terminal all in one. The jaws of the Handy are threaded on the inside and engage the threads of the spark plug centre bolt. One motion raises the ring, compresses the steel spring, releases the terminal and lifts it

The Handy Terminal

from the spark plug. There are claimed to be no nuts to tighten or loosen or fish out of the drip pan. No tools are required, and the terminal is claimed to allow of attachment or detachment in one second. The Handy is claimed to be unable to work loose and thereby eliminates troubles of ignition caused by vibration and jar. The Handy is made in three sizes to fit every make of spark plug and it sells for 35 cents. The Handy is claimed to be a trouble proof terminal for all kinds of motor driven vehicles such as automobiles, trucks, airplanes, motorcycles, etc.

WARNER CLAP-BOARD CHISEL

The Warner Hammer Company, Cromwell, Conn., is placing on the market a new clap-board and floor chisel. The chisel is used in removing clap-boards, floor boards, wainscoting, mouldings, and work of this nature. It is claimed

Clap-Board Chisel

to be a very practical tool for the carpenter, cabinet maker, electrician and plumber. It is not used as a pry and is therefore claimed not to mar the woodwork on which it is used. Directions for use are to drive the cutting edge of the chisel between the two pieces to be separated and roll either to right or left. The blade is full polished and the chisels are packed in half dozen lots at a price of $15 per doz. in the United States.

LACE LEATHER

Wm. Taylor, tanner and manufacturer of leather goods, shoe packs, etc., Owen Sound, Ont., is marketing to the hardware trade lace leather in sides, backs, and cut. The Taylor line comprises oak tanned sides, 4 lbs. and up; oak tanned backs, light, medium, heavy; oak tanned cut laces one quarter inch, five-sixteenths, three-eighths, one half, five-eighths. This leather can also be supplied in raw hide, backs, sides; and raw hide cut, one quarter inch, five-sixteenths, three-eighths, one half inch, and five eighths. The Taylor business was established in Parry Sound in 1865.

Prices, etc., will be supplied to the trade on request.

EVENTS IN THE TRADE

BUSINESS CHANGES

Ottawa.—F. W. Mahon, hardware, has sold assets.

Ottawa.—J. H. Brown, furnaces, etc., has sold assets.

Alida, Sask.—Johnson & Hunter, hardware, have sold to A. Renauld.

Birnie, Man.—V. M. Wilson, hardware, has been succeeded by Ewen Wilson.

Penticton, B.C.—King & Company have disposed of their hardware business to a Vancouver merchant.

Bradford, Ont.—Black Hardware is removing from this town and recently held a sale of all stock and fixtures.

TRADE NOTES

Altamont, Man.—Davison & Murray, hardware and harness, are adding a garage.

FIRE LOSS

Ingersoll, Ont.—Loss estimated at about $100,000 was caused by a recent conflagration in the business district of the town. Chief damage was done to general store of John Northway & Co. Flanders' Hardware, and other stores also suffered some damage from smoke and water.

OBITUARY

Ingersoll, Ont. — Freeman Noxon, member of Noxon Bros. Mfg. Company, implements, etc., died recently in his 87th year. Mr. Noxon had been a resident of Ingersoll for fifty years.

Moorefield, Ont.—Mr. Mouck, hardware merchant, expired suddenly while attending morning service at the Methodist Church. The remains were taken to Deseronto for interment.

Harvie R. Beattie, Toronto, died at his home after many months' illness. Mr. Beattie was in the manufacturers' agency business and for a time was travelling city agent for Cluff Brothers.

PERSONALS

M. F. McKey of Dorset, Ont., general merchant, visited Toronto during the week.

F. Culverwell, general merchant of Sutton, Ont., spent a day in Toronto during the week.

J. E. Shields, general merchant of Ordona Road, Ont., spent a day in Toronto during the week.

Albert Webber, who covers Northern Manitoba for the Merrick-Anderson Co. of Winnipeg, is in Toronto this week.

Harvey Curry, of the Adamson Hardware Company, Orangeville, Ont., has enlisted with the Royal Flying Corps.

R. W. Gifford, head of the shell department of the Massey-Harris Co., Toronto, has been appointed superintendent of the Toronto plant.

C. A. WHITWAM

Vice-president of Hobbs Hardware Co., London, Ont., elected vice-president, Canadian Wholesale Hardware Association at the annual meeting held at Montreal.

Pte. W. Ferrier, previously of Taylor's Hardware, Carleton Place, Ont., has died of wounds.

F. N. Adams, formerly with the Economy Fuse Co., is now representing the Canadian Carbon Co. in Montreal and Quebec territories.

J. L. Wells, of Wells and Emmerson, wholesale and retail hardware merchants of Port Arthur, Ont., has gone to California for the winter.

J. V. Jardine, of Messrs. A. B. Jardine & Co., Hespeler, Ont., was recently presented with a handsome leather couch accompanied by an address of congratulation from the employees of the firm, on his recent marriage.

W. S. Swart, representing the Berbecker & Rowland Manufacturing Company of Waterville, Conn., manufacturers of upholstery and cabinet hardware, was calling on the wholesale hardware trade in Toronto during the week.

AGED 90; BUYS BOND

John McClary, who is in his 90th year, and is head of the McClary Mfg. Co. of London, Ont., and branches, bought the first Victory Bond on Monday in London on the opening of the lists in that city.

GULL LAKE VISITED BY BURGLARS

Patrolling the town of Gull Lake until four a.m. last Sunday night in anticipation of a possible raid did not prove a long enough watch. Between that time and seven o'clock, the stores were ransacked and about $115 in cash taken besides many other valuables. A note left at the store from the owner of the Gull Lake Hardware Co. to his manager saying that the safe was open resulted in a loss of $15 in gold besides jewelry belonging to Mrs. Hutton, wife of the manager.

THE RETAIL HELP SHORTAGE

Various wholesalers, whose product is sold to department stores, are aiding the retailers to overcome the serious shortage of help anticipated as the holiday season approaches. The manufacturers are suggesting to the stores that many of their own employees will serve as "extra" help after noon on Saturdays and in the evenings. Their contention is that these employees are familiar with the class of goods they will be expected to sell to the consumer, and while the manufacturers' suggestion may help the retailers if carried out, the wholesalers also expect some benefit to themselves on the ground that their own merchandise will be pushed by their employees temporarily serving as retail salespeople.

INDUSTRIAL NOTES

Winnipeg, Man.—The Winnipeg Tool & Forging Co. is being reorganized. The company manufacture a line of mechanical tools, masons' tools and wrecking bars, etc.

Unfilled orders of the United States Steel Corporation on October 31 last were 9,009,675 tons, according to the monthly report issued. This is a decrease of 823,802 tons from the orders of September 29, and is the sixth successive monthly decrease.

Toronto, Ont.—The Cluff Ammunition Co. has made application for a permit for the rebuilding of its factory on Atlantic Avenue, recently destroyed by fire. The plans submitted to the City Architect's Department call for the erection of a new structure estimated to cost $20,000. The forging presses, pumps and

furnaces, etc., were not badly damaged, and will be used in the new plant.

ST. JOHN, N.B. NEWS

"The only fault we have to find with business conditions," said a leading hardware man in St. John to the HARDWARE AND METAL correspondent, "is the universal difficulty in securing supplies. Orders are delayed and even if the orders are accepted it is difficult to tell when the shipments will arrive.

"There is no trouble about selling the goods. We never found business better in that respect. The ordinary business goes pretty much as usual; high prices do not seem to bother our customers and even the lines of fancy goods, such as silverware, sell just as readily.

"The shipbuilding boom has made a big difference to us. Every vessel undertaken means an immediate demand for supplies and tools and this department is now doing a steadily increasing business.

"We have found the auto accessories line a profitable one and one which gives promise of considerable growth."

Frederick Powers, of the staff of Foster, Robertson & Smith, St. John, has been accepted for the Canadian Flying Corps and has left for Halifax to commence training. Before leaving, he received a cheque from his firm, a wrist watch from the other members of the staff and a case of pipes from his associates in the Y.M.C.A.

A. H. McMullen, inspector for the government bureau of explosives, delivered a valuable lecture, for the benefit of employees of hardware houses which handle explosives, express companies' employees, and others interested, in St. John recently. He dealt with the proper methods of packing, handling, and storing these goods.

The St. John branch of the Canadian Fairbanks-Morse Co., Ltd., has found it necessary to seek larger quarters. Premises giving them sixty per cent. more floor space and with frontage on two streets have been secured. The building is now being remodeled to suit the new occupants and the shift will be made about the first of the year.

Speaking of the proposed change to the correspondent of HARDWARE AND METAL, K. N. Forbes, acting manager of the Maritime branch, said that the growth of their business has been due chiefly to the expansion of industry in New Brunswick which brings with it an increased demand for mill supplies and hardware lines which they carry. New plants recently erected, old plants enlarged, and others now under way, all add to the demand with which they are endeavoring to keep pace.

The automobile accessory department is becoming an important feature and will be given considerably more space and attention in the new building. Mr. Forbes regards this as one of the best opportunities for increased business and one which can be carried on most satisfactorily in conjunction with their other lines.

HARDWARE LETTER BOX

New Cleveland Range

Patterson & Mark, Dummer, Sask., Will you kindly let us know where we can secure repairs for the New Cleveland Range?

Can any of our readers supply this information?—Ed.

Chimney Sweep's Brushes

Crowe & Elliott, Ltd., Middleton, N.S.: Please advise us where we can procure chimney sweep's brushes.

Can any of our readers supply this information?—Ed.

Modern Malleable Steel Range

Chas. Worrod, Tottenham, Ont.—Where can I get repairs for the Modern Malleable Steel Range?

A NEW DEPARTURE IN AUTO FILLING STATIONS

(Continued from page 35.)

become that it requires practically the entire time of one man. This is a decided advantage in the successful handling of gasoline on so extensive a scale. One employee can keep a careful record and a real check on purchases and on sales, and it is thus possible to locate any discrepancy very readily. Most merchants handling gasoline have realized the likelihood of shrinkage in a given quantity, but have experienced the utmost difficulty in tracing such shortage. In the hands of one man a real check can be made daily. The margin of net profit per gallon is very small, and when quantities as large are handled, it is essential that careful records be kept from day to day to eliminate any chance of possible loss. This firm has sold as much as 700 gallons in one day.

CURTAILED AUTOMOBILE INDUSTRY

(Continued from page 31.)

number available in Canada, not only in the finished cars that are brought into this country but through the curtailment of amount of steel available for Canadian plants. This will mean that cars already in existence will be at a premium. Already in the United States there has been a big demand for used cars and the accessory trade has felt the effects in increased trade. Users of cars who in the ordinary course of events would trade their old car on the purchase price of a new one will make the old one do for another year or two. To put it ship-shape they will spend a certain amount on repairs and accessories to make the car as presentable as possible. To accessory men this indicates clearly one thing—an increased trade in accessories.

Whitby, Ont.—Council has passed preliminary readings of by-law implementing an agreement with the United Rubber Manufacturing and Reclaiming Company, Ltd., of Toronto, to establish a plant here.

HARDWARE AND METAL'S annual Christmas window display contest will be conducted as usual this year. The growing interest evinced by Canadian retail hardwaremen in this contest is evidenced in a wider and more representative response each year.

Two contests will be conducted in accordance with past custom—one for stores in places under 5,000 population; the other for places of 5,000 and over. No restrictions are set on the style of display or the goods used in the arrangement, except that each window must be arranged with goods for the Christmas trade.

ARE YOU GOING TO ENTER?

EIGHT PRIZES WILL BE OFFERED AS FOLLOWS:

Places under 5,000.		Places of 5,000 and Over.	
First Prize	$10.00	First Prize	$10.00
Second Prize	5.00	Second Prize	5.00
Third Prize	3.00	Third Prize	3.00
Fourth Prize	2.00	Fourth Prize	2.00

Contestants will note that an equal number of prizes are offered to the small town trimmer as to those in the larger towns and cities.

The contest closes Tuesday, January 1. No photos received after that date will be entered unless there is proof that they have been delayed in transit.

All matter should be addressed to "The Editor, HARDWARE AND METAL, 143-153 University Avenue, Toronto," and marked "For Christmas Window Contest."

Rope by the Foot

You are the man for whom the Plymouth plan of selling "Rope-by-the-Foot" was devised. You and every other dealer interested in increasing his rope profits and successfully meeting the competition of the mail order house.

By this method you can sell

Plymouth Rope

on the same basis that inferior ropes are sold by a catalogue house and at the same time make a better profit on your sales than by the old pound method.

The selling of Plymouth Rope will give you a distinct advantage over your competitors, because other ropes cannot be sold by the Plymouth plan.

By this method you can tell your customer **exactly** how much a piece of rope will cost—not **about** how much—and you can do it immediately.

The Dealers' Profit Maker

During the past year over four thousand dealers have requested the material necessary to sell Plymouth Rope on this basis.

Over 98% of those acknowledging receipt of the schedules are enthusiastically in favor of this common-sense way.

The experience of a few of these dealers is incorporated in our folder, "Evidence."

If you are not selling rope in this manner now is a good time to begin. Full information and the necessary material will be sent you promptly on request.

Why not send for this material now and for a copy of "Evidence"?

NOTE: Above prices as figured under the several Tables indicated are for 100 feet of 3-strand Plymouth Manila Rope. For variations such as 4-strand Rope and for Lariat use a Table sufficiently higher to cover the advance over basis.

THESE FIGURES APPLY TO PLYMOUTH ROPE ONLY. DO NOT ATTEMPT TO USE THEM FOR ANY OTHER ROPE

THE CLERKS DEPARTMENT

GETTING OUT OF A RUT AND WINNING SUCCESS

The Example of Garnet Willard, Famous Railroader, is an Inspiration to Those Still "on the Way."

SOME time ago a sketch was printed of Daniel Willard, chairman of the U. S. Advisory Committee of National Defense and of its sub-committees on Transportation. It told of his remarkable career and presented the personality of this great railroad man in a comprehensive way. The story of Willard is told somewhat differently by B. C. Forbes in the American Magazine, so differently in fact that the new version is well worth reprinting:

How can a man no longer a youth, and occupying a moderately good position, get out of a rut which has only a stone wall ahead?

Should he stay where he is, even though he feels that he is capable of bigger things, if the opportunity came his way?

Or should he, despite domestic responsibilities, bestir himself and run all the risk incidental to making a change which, at the start, might mean a scaling down of his mode of living, with no certainty that the new field would prove congenial or that he would completely suit his employers?

The editor of *The American Magazine* received a letter which prompted him to find a man who had once been so situated, but who had overcome all obstacles and risen to conspicuous success.

The commission given me by the editor was: "Get a man filling one of the greatest railroad positions in the country who was up against this very same hurdle at one stage of his career, and ask him to tell very specifically and in detail—giving names and dates and all that—just how he fought his way out of the rut and got around the stone wall that faced him. If we can show exactly how one man went about solving the problem, others may profit by the example."

My first thought naturally was, Who is the man holding *the* most important railroad position in America to-day?

The immediate answer was, Daniel Willard, for he is chairman of the Advisory Commission of the Council of National Defense and of its sub-Committee on Transportation, and, as such, the super-director of *all* transportation throughout the United States. Moreover, Mr. Willard, I knew, had had to do his own climbing from track laborer to the presidency of the Baltimore & Ohio Railroad, which he has filled with such notable success for the last seven years that he has not only won recognition as the builder of a new B. & O. system, but was called upon by the country's railroad heads to lead their epochal fight for fairer freight rates.

I accordingly journeyed to Washington. I found Mr. Willard wrestling with a mountain of war-transportation and communication problems. A line of visitors, from an army general down, were waiting their turn to see him.

Energy, Force and Nerve.

Mr. Willard is the embodiment of energy, force, verve. His words and acts personify a rapid-fire gun in action. His mind suggests chain-lightning. His eyes now sparkle, now flash—he has a streak of humor and does not feel called upon to hide it continually, even in war time. A many-years acquaintance won me a friendly reception.

He read the letter of the railroad worker. Then he smiled.

"I was in the same fix," Mr. Willard remarked. "If I hadn't made a move I would have been there, or thereabout, still, because the men who were ahead of me remained—and opportunities on that line were limited."

"Tell me all about it," I prompted. "The shifts you made evidently proved very wise, judging by the rapid strides you have made."

"That notion that I have traveled fast is wrong," Mr. Willard interrupted. "Up to the time I was nearly forty years old, while I had never made more than two hundred dollars a month, I had undergone a lot of useful experience."

"What were your experiences? That's what I want to know?"

"My story is so plain, so unromantic, so devoid of unusual feature or interest that it would disappoint you," Mr. Willard parried.

"Perhaps I would be a better judge of that than you."

I was determined to get the enlightenment the editor's correspondent wanted. I also knew that Mr. Willard's career *was* full of inspiration and suggestion, that he had encountered hardships, and had exhibited stern qualities in overcoming them. His rise from the bottom to the top had not been a pleasant, effortless ride on an escalator; he had had to foot every step, climb every rung without aid or influence.

Born on a two-hundred-acre Vermont farm, in 1861, he had to do more than the usual number of chores, as he was the only boy on the place. Although not a brilliant scholar, he won a teacher's certificate before he was sixteen, taught school one winter, graduated from high school when seventeen, wanted to go to Dartmouth College, but couldn't find the money, and, instead, went for two terms to the Massachusetts Agricultural College at Amherst, where tuition was free. His ambitions ran first to law and then to medicine, but too intent study so impaired his eyesight that he was forced to leave college. Life on the farm, however, offered no glittering future. A railroad, the Vermont Central, ran through his father's meadow. Why not become a fireman—and perhaps an engine driver if his eyesight recovered? That was a goal worth working toward.

His First Railway Job.

At eighteen Dan Willard found his first railway job, as a track laborer: pay, ninety cents a day. The laborer by day studied medicine by night. Within four months he landed a fireman's job on a neighboring line. Wood was then the staple fuel, and it was not play keeping the wheezy locomotive adequately stoked. But he must have done it satisfactorily, for in two years he attained his railway ambition: he was made an engineer.

For a time he was happy and content. The pay yielded a comfortable living; the work was congenial; he was near home and friends; the job promised to be permanent. What more could a normal human being desire?

Dan Willard by and by realized he had settled into a rut—a comfortable rut, but, nevertheless, a rut.

"At the end of two years as locomotive engineer I decided to strike out," Mr. Willard related reminiscently. "It was well I did. The man who was my superintendent on that road is still superintendent of the same division although he has had several opportunities for high positions, but declined them, and others who were there in my time are still there. Had I stayed I might have been a passenger engineer, but probably nothing higher."

Off he went to Elkhart, Indiana, where he had a friend working on the Lake Shore and Michigan Southern. Here he was fortunate in getting an engineer's job. The pay was fully one hundred dollars a month, a long jump from the sixty dollars or sixty-five dollars paid back home. Dan Willard felt he was getting on in the world.

Alas, acute depression came, the road had to retrench, and Engineer Willard was dropped. He had enjoyed his fat pay less than seven months.

Then came a period of character testing, of stamina trying. First one road and then another turned him down because he looked too young and inexperienced to be intrusted with an engine—this was in 1884, when he was twenty-three, and as he wore no mustache and was not a giant in stature he looked boyish. One months, two months, three months passed without bringing employment. Would he pocket his pride, bid good-by to his ambitions and return home, an out-of-work, an adventurer who had sought to fight the wider world, and had lost?

No! He would fight it out. He had saved his money prudently. He could live on a few dollars a week. Depression would not grip the country for ever. By constantly trying, he would capture a job some day. He would not sneak back home like a whipped cur.

Pluck and Persistency.

Pluck and persistency finally won. Fate had sought a joust with him and he had not been thrown. An enterprising, far-seeing Westerner, Senator Washburn of Minneapolis, conceived a new railway project, and work was started on it. Young Willard, alert for any possible opening, applied for a job. There was only half-a-mile of track and one engine, which was already manned. Very well, what other jobs were there? Would the engineer care to act as

a brakeman? If that was the best to be had, why, certainly he would take it.

For a second time, while engaged in the roughest kind of work, living under the most uncivilized conditions and earning much less than an engineer's pay, Dan Willard was put to the test. Would he grab a present advantage and thereby sacrifice a possible future? The Michigan Southern offered him his old job as engineer. It carried good pay, the hours were reasonable and the work was attractive. How great was the contrast between such conditions and those under which Willard was then existing let him describe in his own words:

"When I began braking on the 'Soo' line, which is now a four-thousand-mile system, it had half a mile of track, one engine, one locomotive engineer and one conductor. Soon we had forty-six miles of track, with one train running each way daily. I was made mechanical foreman. That sounds all right. But my job included not merely making what locomotive repairs were necessary, and repairs to freight cars, but keeping the coaches clean, sweeping them out regularly, looking after repairs on the line, jumping in to take the place of engineer or conductor whenever occasion arose, and acting as telegraph operator. Yes, I had taken the precaution very early to master telegraphy as a possible stepping-stone some day.

"Besides all that, I had to take care of the roundhouse. In winter we had cold—fifty-five degrees below zero—and no steam heat. My worst problem was to keep the water in the engines from freezing during the night. I had to sleep alongside the engines in my underclothing, and every two hours or so I had to get up and put wood in four little stoves that tried to fight away the frost. I hit upon the plan of placing pails containing an inch or two of water here and there over the floor, and when I got up in semi-darkness I used to feel each pail if the water had begun to freeze. If there was no ice, I shut the dampers so that I wouldn't have to get out of bed again so soon; if there was any ice I would fill up the stoves and leave the dampers open to prevent disaster."

Are there many young college-bred men to-day who would elect to lead a life of that kind rather than accept a comfortable job such as locomotive engineer on a large, well-organized road? Instead of eight hours' duty, Willard was on duty twenty-four hours every day, Sundays and holidays included.

He Roughed It.

During these early construction days on the Minneapolis, St. Paul & Sault Ste. Marie Railway—the now famous "Soo" line—the young man-of-all-work had to sleep sometimes on the ground, sometimes in box cars, sometimes over saloons or similar dens, rubbing shoulders with uncouth navvies and the scum of the earth, men and women. These were pioneer times, and the building of a railroad, entailing the spending of much money in wages, attracted all sorts of adventurers, including cut-throats, robbers, gamblers, drink-sellers, harpies. Young Willard, however, although compelled to eat at the same table as this flotsam and jetsam, attended strictly to his own business, did no drinking, joined no card parties, participated in no dancing or other jollities. Yet not once was he drawn into any row nor was he ever treated with anything but respect.

As construction proceeded, Willard acted as conductor, engineer and various other things. When the road was between four hundred and five hundred miles long F. D. Underwood (now president of the Erie and recognized as one of America's ablest railroad giants) was appointed general manager. Willard then had the title of "General Foreman" of some two hundred miles of the road. He had to take care of about twenty-five engines and several hundred cars, had to act as storekeeper, keep the materials account, record the time of all the men and, in short, see that everything was done properly. No work was too menial, too unimportant, or too onerous for him to tackle.

UNCLE SAM: "Give me a business man for a business job."
—Forbes' Magazine.

In 1887 various parts of the system were linked together under one large organization, and for a time Willard ran a passenger engine out of Minneapolis. But his superiors, recognizing that he was fit for bigger tasks, made him trainmaster and, after several years' service, assistant superintendent.

"There was a time at that early stage of my life when I was exactly where your correspondent is," said Mr. Willard. "It looked as if there would be no chance of further promotion. The places ahead of me were capably filled by youngish men.

"Edmund Pennington was superintendent and Mr. Underwood the general manager, both young. The panic of 1893 came, and all expenses were cut to the minimum. I was married, had two young children and was just able to get along. One year followed another without bringing any improvement in my prospects. The future was not bright, and I began to look around in earnest for a more attractive opening.

"Meanwhile I spent my available time studying railroading. I bought and read and reread every railroad book that I could find—the bibliography of railroading was not then what it is now. My bible was Wellington's 'Economic Theory of Railroad Location,' a 700 or 800-page volume which is still standard. 'Railroad Transportation,' by Professor Arthur T. Hadley, was also very helpful. So were the books of Governor Larrabee of Iowa, and A. B. Stickney, of the Great Western. Captain W. W. Rich, the first chief engineer of the 'Soo' line, had early filled me full of admiration for the engineering profession, and I spent much time studying engineering books. I really did my best to learn everything I could about railroading in all its phases. Fortunately, it was a keen pleasure for me to read, so I had no temptation to waste my time aimlessly.

"Eight years passed without bringing any visible reward. I was still assistant superintendent, earning less than two hundred dollars a month. Every place above me was filled, and apparently likely to remain filled for years to come."

It is eternally true, however, that responsibility seeks shoulders able to bear it. Here was an obscure assistant superintendent who had diligently used his school years, had not scorned to start as a track laborer, had not hesitated to leave the narrow environment of his private territory as soon as he found progress there impossible, had withstood a long spell of enforced idleness without wilting, had stuck to a twenty-four-hour-a-day job beset with hardship and even danger rather than accept an invitation to return to a comfortable rut, had filled every conceivable minor position in railroading, had risen to the rank of assistant superintendent—and had saturated himself with enough theoretical as well as practical railroad knowledge to qualify for almost any executive post.

Getting Above the Job.

When a man becomes conspicuously larger than his job, when his ability impresses everyone around him, when his personality radiates leadership qualities, something is certain to happen sooner or later. Such a man usually develops unquestioning self-confidence; he knows in his heart that he is master of his profession, and this knowledge, born of merit, emboldens him to seek to mold circumstances, whereas the man of less caliber, less experience, less training, and less vision is apt to let circumstances mold him. He is afraid to strike out. He fears he may not make good. Moreover, the man of exceptional parts always stands a chance of attracting the eye of leaders, for leaders are ever on the lookout for the right stamp of human material. The big job often seeks the big man. When it doesn't, the big man is likely to seek the big job.

In Willard's case, the job, after many years of patient plodding and vigilant preparation both in theory and practice, sought the man. Mr. Underwood, even then a railroad operator of brilliant ability, was offered the general managership of the Baltimore & Ohio Railroad, and his first care was to find some man he knew to become his right-hand man as assistant general manager. Now Underwood had not been thrown in close contact with Trainmaster Willard. Willard reported to another officer and had not seen Underwood

(Continued on page 46.)

Sherwin-Williams Co. Convention

The Year's Work Reviewed—Plans For Next Year Outlined—The Sales Winners—Speech by Rev. Major Williams.

THE annual convention of the Sherwin-Williams Co. of Canada started on October 29, when the Eastern representatives of this organization met in Montreal, to go over and discuss the plans for the coming year. Last year's work was carefully reviewed, and the new plans for the coming year were submitted for the approval of the representatives.

The meeting opened on Monday, October 29th, and continued until November 1st.

The president, W. H. Cottingham, was unable to attend the opening meeting, but arrived in time to take part in the convention on Wednesday morning.

Lieut.-Col. The Hon. C. C. Ballantyne, vice-president of the company, made an address at the opening meeting, but owing to other important business was unable to devote the usual time to the convention this year.

H. M. Ashby, general manager of the company, opened the convention and greeted the managers and representatives, and acted as general chairman during the whole convention.

The remarks made by those connected with the different departments throughout the plant indicated that during the past year great improvements had been made in the methods of handling goods, manufacturing new lines, and in the advertising policy. The whole proposition presented to the salesmen to offer to their trade was intended to show that a great deal of care had been taken in drawing up the plans for the coming year.

One of the strongest and most effective advertising campaigns yet undertaken by this concern has been completed, and put into the hands of the representatives.

Business possibilities appear very bright, and it is expected that the coming year will prove a very successful one.

J. A. Derouin, representative in the city of Montreal, proved to be the most successful salesman during the past year, not only having the largest increase in sales in the East, but also throughout the entire company.

He was presented at the banquet on Wednesday evening held at the Canada Club, with a Top Notcher gold pin.

J. E. Auger, also a representative in the city of Montreal, and the surrounding country, calling on the large manufacturing concerns, was successful in holding second place.

Mr. Cottingham, president of the company, presided at the banquet, and the evening proved very enjoyable indeed. The principal speech of the evening was by the Rev. Major Williams, who gave a stirring talk on patriotism, and the heroism of the boys at the front.

The convention closed on Thursday. The enthusiasm shown by the representatives and managers during the whole meeting was very marked and a general feeling of optimism prevailed.

GETTING OUT OF A RUT AND WINNING SUCCESS

(Continued from page 45.)

to speak to more than half-a-dozen times. Underwood, however, had not gone through life with his eyes in his vest pockets; he knew how to spot men. He was guided in his selection of Willard solely by the latter's record and his inspiring personality.

Again the problem confronted Daniel Willard of whether it would be better to stay with one property in a moderately responsible position and with whose operation he was thoroughly familiar after fourteen years' service, or whether he should risk making a change. Mr. Pennington made Willard's problem all the more difficult by offering him the important position of general superintendent, a really tempting proposition, since it was only one office removed from the general managership.

"My decision was influenced, I fear, partly by sentimental reasons," Mr. Willard told me. "There was a peculiar interest attaching to the B. & O.; I was, of course, familiar with its long history, I had some knowledge of its potentialities, and I had great admiration for Mr. Underwood. So to Baltimore I went. I was put in charge of maintenance of way and equipment of the road."

The long years of self-education, self-improvement, diversified experience and intense industry were now bearing fruit in greater and greater abundance. Within two years Mr. Underwood was elected president of the Erie, and he had found Willard so indispensable that he induced him to go along as assistant to the president. But, just as in the case of the "Soo" line, the B. & O. did not want to part with Willard. President John K. Cowen tried hard to induce Willard to remain as general manager of the whole B. & O. system. This was really a big thing. It paid a much better salary than the Erie was going to pay, and the office of general manager carried more weight than the elastic position of "Assistant to the President," a job which may mean much or may mean extremely little. However, Willard had told Underwood he would go, and he went.

RUSSIAN COTTONSEED-OIL INDUSTRY

The cottonseed-oil refining industry of Russia, established mainly in the districts of Ferghana, Murgal, and Merv, has lately been increased by the addition of two new mills and the enlargement of the old mills. The material equipment of the industry, before the new mills were established, showed thirty 16-inch hydraulic presses, seven 12-inch presses, and several smaller ones. The 144,000 tons of cotton seed formerly handled has increased to 192,000 tons. The exports of cotton seed from Turkestan in 1913 were about 20,320 tons. One pood (36 pounds) of cotton seed of the first grade yields 6.56 pounds of unrefined oil, 14.4 pounds of oil cake, and 19 pounds of husks and linters and other waste.

Salesmen in attendance at the Sherwin-Williams Co. Convention held in Montreal recently.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

ADVANCE information on the market for automobile accessories indicates that goods made from steel will be no higher in price while automobile accessories into which cotton fabric enters are in an uncertain market and higher prices would not come as a surprise to wholesale dealers. A canvass of the situation among United States manufacturers by the purchasing agent of a large Canadian wholesale house shows that the manufacturers are ready to book freely at present prices for delivery up to spring of next year for steel goods. On cotton fabric goods, such as seat covers, tire reliners, tire covers and blow-out patches, they will book only at prices ruling on date of shipment.

There is a firmer undertone in the market for black and galvanized sheets as a result of the realization that producers in the United States will have very limited supplies for sale on new contracts. Any contracts that are taken are at stiff premiums, as the mills are loaded with Government orders. This situation has put a measure of firmness in the market by way of contrast to the sagging tendency that has been noted for several weeks past, but it is claimed there are good stocks available in Canada at present, and prices should not advance for the present at least to much higher levels. The restriction of amount of steel available for use in pleasure cars will have the effect of curtailing the number of pleasure cars available in Canada. Wholesale accessory dealers anticipate this should help the sale of accessory lines in the making of old cars look presentable. Lines in which advances have been recorded during the week include lawn bowls, golf clubs, fishing tackle, automobile wrench sets and repair kits, cotton gloves, steel wool, gas plates, brooms. A decline has been recorded in the price of domestic pig-iron. Trade in hardware goods is reported very good. Heavy shipments have gone forward for Northern lake points before the close of navigation this month.

MONTREAL MARKETS

MONTREAL, Nov. 14.—The business conditions here are of a normal nature, with few changes in commodities generally. Cotton rope is very firm, and is quoted at 52c for ¼-inch and larger and 53c for the 3/16-inch. Mrs. Potts' irons are 5c per set higher for both numbers. There is much concern regarding the immediate future of tin plates and tinned iron, and these will be very hard to procure. Ingot tin is firmer, with a higher spread of 2½c. Stoves and ranges are selling better, while the demand is still good for heating stoves.

Mrs. Potts' Sad Irons Are Slightly Higher

Montreal.

SHELF AND HEAVY GOODS.—There is a fair demand for regular lines this week and changes are few. The weather conditions have been good, and where it is possible to take supplies in by water route, especially where the goods are heavy, there is a tendency to purchase a little more freely. Mrs. Potts' irons are advanced to $1.75 for No. 55, and No. 50 to $1.85. Cotton rope is quoted at 53c for the 3/16 inch and 52c is asked for the ¼ inch and larger.

Cut And Wire Nail Prices Hold Steady

Montreal.

NAILS AND WIRE.—Wire and cut nail business is of a limited nature these days, as building operations are limited in most districts. There is the usual filling in of sizes before winter arrives, and with a limited amount of sorting, business prices remain unchanged, with wire nails selling at $5.50 per keg base, and cut nails $5.75 per keg base. Smooth steel wire is quoted at $6.50 base, per 100 lbs.

Demand For Tubes And Iron Pipe Not Heavy

Montreal.

IRON PIPE.—The demand for iron pipe is slow. What business is obtained is mostly of sorting nature, as there is no inclination to load up at the high prices which this commodity has reached. The reason for local increased shipments to points served by water routes as well as rail holds, viz., that some retailers are now making ready for winter and putting stocks in shape while freight can be brought in by water.

Small Business Obtains For Steel And Bar Iron

Montreal.

IRON AND STEEL.—The business coming here for iron and steel is purely of a sorting nature, and the tendency is to buy in very small lots. Heavy lines such as these are being asked for at some points where the difference in water and rail freight rates is an item, and from such sources one jobber reports an increased demand. Prices remain firm and unchanged at the following quotations:

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05
Sleigh shoe steel	5 05
Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0.17½-0 19
Black Diamond tool steel, per lb.	0 18-0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 18-0 19

Supplies Of Tin Plate Will Be Decidedly Scarce

Montreal.

SHEETS AND PLATES.—There is a strong likelihood that the situation with regard to tinplate and tinned iron will not improve for some time. In fact, one of the largest dealers here advises the careful use of stocks in hand by retailers throughout the country, as there is little prospect of deliveries of any consequence before well into the second quarter of 1918. There is no prospect here of a lowering of quotations, and, with stocks so low everywhere, those who are using these commodities could well bear in mind the facts presented and make as careful use of the supplies they now have as circumstances will permit. Black sheets are scarce and are quoted at prices given below. Some supplies, how-

ever, may be had of certain sizes and gauges at favorable quotations:

MONTREAL—	100 lbs.
10 gauge	$12 50
12 gauge	11 60
14 gauge	11 50
16 gauge	10 75
18-20 gauge	10 25
22-24 gauge	10 40
26 gauge	10 45
28 gauge	10 55

Stoves And Ranges Are Selling Better

Montreal.

STOVES AND RANGES.—With the winter season approaching, the stove makers are finding a better demand for ranges and some lines of stoves. Until the present the demand has been somewhat limited. Heaters are still selling fairly well, and, while there is still a big shortage of materials, the foundries here have had a fairly satisfactory season, and have taken care of the business offered them. The demand for oil heaters is still very good, and with a firmness in all lines prices are unchanged.

Gasoline Sales Smaller; Coal Oil Business Good

Montreal.

COAL OIL, GASOLINE.—There is a good movement of coal oil this week, and with shorter days there is a large consumption in the country. Gasoline sales are gradually diminishing, owing to the fact that some are disposing of old cars, or laying them up for the winter months. This, however, is not very general, owing to the fine weather, and those who can get out these days find the air an ideal tonic, with real enjoyment possible. Quotations on coal oil are unchanged at prices given in current markets. Gasoline is quoted at 32½c per gallon.

Sorting Business Fair For Rope And Cordage

Montreal.

CORDAGE, ROPE. — With a fair amount of business for this season of the year, rope and cordage are firm. One large hardware jobber is quoting cotton rope at 53c for 3-16 in. and 52c for ¼ in. and larger. There is some stimulus in orders being received from outside points served by water routes, as retailers are anxious to put their stocks in good shape before the winter. Quotations as found elsewhere in the current reports apply for this week.

Lead Products Are Firm, But No Changes

Montreal.

LEAD PRODUCTS.—There is no change reported for the week in lead products, all lines being held firmly. The demand is really small, and what business obtains is of a sorting nature and for limited quantities. Quotations are as follows:

MONTREAL—	
Lead pipe, lb.	$0.15
Lead waste pipe, lb.	0.16
Lead traps and bends	10% on list
Lead wool, lb.	0.15
Lead sheets, 3 lbs. sq. ft.	0.13¾
Lead sheets, 3½ lbs. sq. ft.	0.13¾
Lead sheets, 4 to 6 lbs. sq. ft.	0.14

Little Change Noted In Old Materials

Montreal.

OLD MATERIALS.—For several weeks there has been a decidedly dull and uninteresting market for old metals, rubbers, auto tires, etc. There seems to be no change in sight for the immediate present, although one large dealer states that there should be some movement in this line within the next week or two. We quote on brass, copper and other lines as follows:

MONTREAL—		
Tea lead	$ 0 04	....
Heavy lead pipe	0 05	....
Yellow brass	0 14	....
Red brass	0 20	0 21
Light brass	0 08	....
Scrap zinc	0 06	....
Heavy copper	0 22	....
Old cast iron, per gross ton	25 00	....
Wrought iron, No. 1, per gr. ton	22 00	23 00
Heavy melting steel	20 00	....
Pipe scrap	15 00	17 00
Stove plate, per ton	15 00	17 00
Old rubbers, boots and shoes	0 08	....
Overshoes, lumbermen's rubbers boots	0 06	....
Bicycle tires	0 03	....
Auto tires	0 05½	....

Tin Is Some Higher; Demand For Ingots Small

Montreal.

INGOT METALS.—There is very little movement in the market this week, but the item of interest again is tin, which continues its spectacular movement, with a tendency to higher price. This is now quoted at 72½ to 75c. From the most reliable sources it would seem that dealers would do well to conserve as much as possible what supplies they have, as deliveries during the first and second quarters of 1918 can scarcely be other than light. Copper is not moving to any extent. Other lines are unchanged and the demand is small.

TIN.—There is a spectacular movement in tin, which has been reaching high levels in London and New York. The demand here is small, with a firm price of 72½c to 75c lb.

COPPER.—Copper demand is very small. Stocks are, of course, light. The price of last week still rules—34c lb.

LEAD.—There has been no change in lead this week, and demand is small. If large quantities were asked for, some dealers would offer a slight reduction from the prices of 9¼c to 9½c quoted last week.

SPELTER.—While we have no new price for spelter this week, the United States market is firmer, large purchases by the Government being reported. The tendency here is toward higher levels, but requirements can now be filled at 10½c to 11c per lb.

ANTIMONY.—The market for antimony is extremely quiet, with very little moving. Prices are still 16c to 18c.

ALUMINUM.—Quotations are made at 58c to 60c. Aluminum is very quiet and the demand is small.

TORONTO MARKETS

TORONTO, Nov. 15.—The feature of market conditions during the week has perhaps been the firmer undertone to the market for black and galvanized sheets. Brooms of all kinds are also in a firm position as result of scarcity of certain grades of broom corn used in the outside portion of the broom. Price movements have been in the upward direction with perhaps one exception, namely, on pig iron. This decline comes as a result of price fixing of differentials in the United States market. There has been a good buying movement during the week. Goods for Northern Ontario points have been moving out freely in order to take advantage of water routes before close of navigation.

Automobile Wrench Sets And Repair Kits Up

Toronto.

WRENCHES, REPAIR KITS.—Higher prices were made effective for the Mossberg automobile wrench sets and repair kits to the extent of 15 per cent. Bicycle wrenches A1 bright are now quoted at $2.88 per dozen while A3 bright are quoted at $3 per dozen. Socket sets automobile wrenches are now quoted at $2.25 per set for No. 17 and $3.60 per set for No. 30. Double-end socket wrenches unfinished show an advance of approximately 20 per cent. on list prices. The discount remains unchanged at 25 off list.

Cotton Products Show Firm Tendency

Toronto.

COTTON GLOVES.—There is a continued strong situation in the raw cotton market with a similar tendency in the finished products. There is great uncertainty in the market due to the condition in the raw cotton market. Authorities on the situation are very guarded about expressing an opinion as to the probable future trend of the raw cotton market. There are two camps that divide the opinion in the market. On the one side there are those who look for a continuation of the upward trend of the market and base their belief on the greatly increased consumption of cotton for war purposes, such as duck for tents, munitions, clothing. Great Britain has decreed that henceforth all cloth for civilian use must have at least 40 per cent. cotton in order that the wool supplies might be conserved. The United States Government is putting proportion of cotton in the underwear for their soldiers and this is taking enormous quantities. The opposite opinion prevails, perhaps in the minority of cases, that the cotton market is likely to be lower before it is higher. Twine, sash-cord, cotton rope held steady in price during the week at the advances recently recorded. One line to show a higher price was that of cotton gloves, Tapatco

L 10 now being quoted at $2.25 per dozen, an advance of approximately 10 per cent.

Steel Wool Shows Advance Of 10 Per Cent.

Toronto.

STEEL WOOL.—An increase of approximately 10 per cent. was made effective in the price of steel wool during the week, No. 1 now being quoted at 50c per pound and No. 2 at 45c per pound. This material is used for polishing work. The market on this commodity has followed the generally high prices in all lines of steel and comes as a natural sequence to advances that have been made in numerous other commodities made of steel.

Gas Plates And Children's Brooms Up

Toronto.

GAS PLATES, BROOMS.—An advance of 50c per dozen has been made in the small single gas plate, making the price now $2.10 per dozen as compared with the former price of $1.60 per dozen. Due to the scarcity of broom corn and the high prices prevailing for stocks that are obtainable the price of the child's broom has been advanced to $1.50 per dozen. This advance follows one recently recorded on various kinds of house brooms.

Lawn Bowls Have Been Advanced 35%

Toronto.

LAWN BOWLS.—Owing to the difficulties attending the manufacture of lawn bowls within the British Isles a scarcity of these articles has developed. One manufacturer's representative in calling on the Canadian trade recently stated that his principal in the Old Land had been reduced to an operating force of one man whereas in normal times a considerable staff was employed. Wholesalers have accordingly been compelled to advance their prices on this line during the week to the extent of approximately 35 per cent. One of the lines that is sold in this market is now quoted at $8.50 per pair.

Golf Clubs Make Advance of 20 Per Cent.

Toronto.

GOLF CLUBS.—An increase to the extent of 20 per cent. has been made effective in the price of golf clubs owing to the difficulty manufacturers are experiencing in getting supplies of raw materials. These clubs largely come from Scotland, as that is the home of the golf game. An embargo has been placed on the importation of lignum vitæ by British Government and the manufacturers accordingly have been restricted in their operations. Iron clubs that form- $2.75 have now been advanced to $2.50 and $3.50 each. Wooden golf clubs that formerly sold at a range of prices from $2 to $3 each have been advanced so that the range is now from $2.75 to $4 each.

Fishing Tackle Makes Big Advance

Toronto.

FISHING TACKLE.—Wholesale dealers in fishing tackle have advanced their prices from 20 to 30 per cent. as a result of higher prices that have been announced by the manufacturers. Prices to the retail trade had not been figured out at the time of writing but it is expected they will be in shape in the near future. Firmness in the market for fishing lines has been due to the upward strides that the raw cotton market has been making. Raw cotton is now the highest that it has been since the beginning of the war.

DETAILS OF PRICE FIXING ON SHEETS.

President Wilson has approved an agreement made by the War Industries Board with the principal steel industries of the United States, fixing maximum prices, subject to revision January 1, 1918, on certain steel articles, as follows:

Sheets (per 100 lbs. f.o.b. Pittsburgh):

No. 28 black sheets	$5.00
No. 10 blue annealed sheets	4.25
No. 28 galvanized sheets	6.25

The above prices apply to both Bessemer and open-hearth grades.

Pipe:

On ¾-inch to 3-inch black steel pipe, discount 52 and 5 and 2½% f.o.b. Pittsburgh.

Cold-rolled steel:

17% discount from March 15, 1915, list, f.o.b. Pittsburgh.

Scrap (f.o.b. consuming point):

	Per gross ton
No. 1 heavy melting	$30.00
Cast-iron borings and machine-shop turnings	20.00
No. 1 railroad, wrought	35.00

Wire:

Plain wire (per 100 lbs. f.o.b. Pittsburgh)	3.25

Tin Plate:

Coke base, Bessemer and open hearth (per 100-lb. box f.o.b. Pittsburgh)	7.75

In connection with the above, the iron and steel manufacturers have agreed promptly to adjust the maximum prices of all iron and steel products other than those on which prices have been agreed upon to the same general standard as those which have been announced. It is expected that this will be done promptly and consistently in line with the basic, intermediate, and finished products for which definite maximum prices have been established.

Furnace Demand Rapidly Reduces Stocks

Toronto.

STOVES, FURNACES, ENAMELWARE.—Owing to the good demand that has been existent within the past few weeks on furnaces some manufacturers report their stocks are down to a very low point. One concern that in normal times would carry a stock of thirty to forty furnaces states that their supplies are down to four furnaces at the present. There is an excellent demand for hot air furnaces possibly because of the lesser expense connected with their installation as compared with other heating systems. Manufacturers report they are having difficulty in getting a sufficient supply of labor to manufacture the number of furnaces demanded by the trade. This has naturally caused a decrease in the number of furnaces available. The demand for coal heaters has slackened somewhat under the influence of finer weather, but is expected to develop again as soon as another cold snap comes. The demand for gas ranges is fair with inquiry for electric ranges somewhat quiet. Enamelware held steady in price with a fair sale.

Castor Oil Shows Advance Of 5c Pound

Toronto.

GASOLINE, OILS.—An increase in the price on castor oil was recorded during the week to the extent of 5c per pound, making the price now 50c per pound in barrel lots and 52c per pound in less than barrel lots. This is the first change to be recorded in this commodity for some time. Gasoline and lubricating oils continue to hold at the levels maintained for several months past. In the United States it is reported that the shadow of price regulation has had a retarding effect on drilling operations and that producers have not been as keen as they would otherwise have been. Gasoline continues to be quoted at 31½c per gallon. Coal oil prices and prices of lubricating oils were also unchanged.

Cordage And Twine Market Holds Steady

Toronto.

CORDAGE, TWINE.—There was a better buying movement of Manila fibre in the primary market during the week as consumers have evidently made up their minds that there is nothing to be expected in the shape of price regulation in the near future. Some of these purchases were made at slightly lower prices than recent quotations. In the local market the situation remained unchanged with prices maintained in Manila and sisal ropes. Small twines continue to move freely in anticipation of Christmas trade.

Nails And Wire Hold Unchanged

Toronto.

NAILS, WIRE.—The situation in wire nails and steel wire remains one of steady firmness. There is very little building in the Toronto district at the present time and this is causing a quiet local demand. From the northern part of the province, however, considerable building has been reported due to the prosperity in the mining districts. There has been a fairly good demand from country districts. Price quotations hold steady at $5.45 per hundred pounds base in the majority of instances. Smooth steel wire continues to be quoted at $6.50 base. In wire products the most recent change was that announced last week in black wire cloth, in which a decline of 25c per 100 square feet was recorded for booking prices, making the price $3 in 100-foot rolls and $3.05 in 50-foot rolls.

Steel Orders For Domestic Account Falling

Toronto.

IRON AND STEEL.—There has been

a substantial decrease in the amount of unfilled orders on the books of the largest producer of steel in the United States during the month of October. Reports from that quarter show that the amount of unfilled orders declined by 823,804 tons during the month and is directly attributable to the falling off of orders placed on behalf of domestic manufacturing trade for business other than war business. Part of this decrease in tonnage can be attributed to Canadian manufacturers as they have realized that it is impossible to place business in view of the demands of the United States Government toward speeding up munition work. Orders placed by Canadian dealers six months ago have not arrived in some instances and they are not inclined to place further orders until there is little better assurance that they are going to get their stock. For this reason the tendency is to hold prices firm at present levels. There is a fair domestic demand.

Think Bottom Has Been Reached On Sheets

Toronto.

SHEETS, PLATES.—The consensus of opinion among those closely in touch with the sheet situation, both black and galvanized, is that somewhere near the bottom of the market has been reached on the recent declining market. Dealers report that some of the large independent mills in the United States intimate that sheets are likely to be scarce in the future due to the necessity of looking after Government business. In one quarter there was a further decline of $1 per hundred pounds on black sheets in Nos. 12, 14 and 16 gauges, making the quotations in the instance referred to $8.05 for No. 12, $7.95 for No. 14 and $8 for No. 16. But even in that quarter intimations were made that there is an apparent tendency toward an undertone of firmness. Galvanized sheets continued to be quoted at a range of prices, but the undertone is one of firmness. Prices are considered firm at present levels, although advances from those figures are not anticipated in the near future.

Broom Corn Poor; High Prices Inevitable

Toronto.

BROOMS. — From one of the leading commission merchants of broom corn in Chicago advice has been received by a local manufacturer of brooms to the effect that the broom corn crop raised this year is the poorest in quality that has been raised for a long time. Predictions are not made as to the trend of the market in the future, but the statement has been made that already $500 a ton has been paid for a crop of Illinois corn. In speaking of the situation this firm of commission merchants say as follows:

"There is one thing we would like to impress on you. The quality of the broom corn raised this year is the poorest we have had for a long time. There will be the greatest scarcity of hurl you have ever seen. There will be more red corn than usual. Broom corn sold now for hurl is really not more than long self-working. You will have to make your brooms shorter this year than ever.

"It is hard to believe the true condition in broom corn this year unless you have seen for yourself. But we have seen ourselves and we are telling you the absolute truth about conditions. We can scarcely believe that with the large amount of poor stuff in the country present high prices can be maintained. We are, however, through prophesying and will take the future as it comes. $500 a ton has already been paid for a crop of Illinois corn."

In explanation of the term hurl it should be stated that this is the grade of corn that is usually used on the outside of the broom. "Long self-working" corn is the grade that is usually placed in the centre of the broom. Prices quoted at Chicago at the present time range from $400 to $484 per ton when duty and freight are paid to this market. These prices are considered prohibitive by some manufacturers who are not purchasing at the prices quoted.

During the week a further advance in brooms was recorded, which now makes the lowest priced broom quoted by one of the large manufacturers $7.50 per dozen for three-strand house broom. This is an advance of 50c per dozen. On warehouse brooms the price has been advanced 75c, making the range of prices $10 to $11.50 per dozen. Yacht mops and dish mops have made an advance of approximately 10 per cent. The price of the cheapest yacht mop is now $6 per dozen, while dish mops are quoted at $7.50 per gross.

Corrugated Sheets Reflect Firmer Undertone

Toronto.

CORRUGATED SHEETS.—There was a firmer undertone to the market for corrugated sheets as the result of developments in the United States market during the week. While the new prices have been announced on sheets as fixed by the Government, dealers in this market have been led to believe that there will be very little if any sheet stock available for merchant trade. What is available is likely to carry heavy premiums which will make the possibility of a decline to the merchant trade rather remote. On the contrary as a result of the situation local dealers express the opinion that the situation is such that an advance is not improbable in the near future. There has been more buying of corrugated sheets within the past week than in recent weeks. Conductor pipe and eavetrough held unchanged at a discount of 10 per cent. off list prices.

No. 28 gauge	$8.70-$9.20	$ 7 20
No. 26 gauge	9.60-10 00	....

Boiler Tube Situation Still Holds Firm

Toronto.

BOILER TUBES.—There is no relaxation on the part of the Governments of Canada and the United States with respect to regulations on the sale of boiler tubes. Stocks in local dealers' hands are getting low and further supplies cannot be brought in without license for each particular piece of work. Quotations hold unchanged from those of last week.

Solder In Firm Position, Due To Tin Situation

Toronto.

LEAD AND ZINC PRODUCTS. — There was a continued strong market for solder during the week as the result of the acute situation in tin in the primary market. The market at primary points is almost bare of tin and prices went up to the level of prices in the local market. Negotiations are under way, it is stated, looking to the relief of the acute situation. It is hoped that permits will soon be granted by the British Government to allow stocks of tin to leave her ports. Lead products were in stronger undertone during the week as the result of the upward turn in pig lead. A fairly good demand is reported for lead and zinc products.

Dullness Prevails In Old Materials

Toronto.

OLD MATERIALS.—There was a dull market for old materials during the week.

Mills were buying very small quantities and at a price. Local wholesalers have not been very anxious to get into the market in a buying way. Prices quoted hold unchanged at recent declines recorded two weeks ago.

Tea lead	$ 0 04	....

Tin Continues Acute; Pig Lead Is Firmer

Toronto.

INGOT METALS.—The commodity of greatest interest in the ingot metal market during the week was tin, following the acute situation that has developed in the primary market as a result of stoppage of supplies. Lead was in firm undertone.

COPPER.—The question of price on copper other than that used for Government work has not yet been established in the United States. The matter has been taken up with the Government, but in the meantime holders of copper are not selling at the 23.50c basis established for Government contracts. The market locally held unchanged at 32c for casting copper and 33c for electrolytic.

TIN.—There is hope that the present accte situation in the primary market will soon find relief, as the question of licenses for shipment has been taken up with the British Government, and it is felt that some redress may soon be forthcoming. In the meantime, prices were skyrocketing in the New York market, and the local market went upward in sympathy, prices being quoted from 70c to 75c per pound.

SPELTER.—There is a measure of firmness to the spelter market as the result of negotiations under way between the leading producer and representatives of the United States Government. The opinion prevails that the United States Government is likely to be in the market for supplies. Locally quotations were unchanged at 10c per pound.

LEAD.—There was a firm undertone to the lead market during the week, although there was not as much buying reported at primary points as developed during the previous week. Prices are holding steady locally at 9c per pound.

ANTIMONY.—Demand for antimony is light in the local market, and the same is true at primary points. Stocks are reported to be accumulating. Prices quoted were from 16c to 18c per pound.

ALUMINUM.—The market held unchanged at 60c per pound. There is but little change in the situation generally, as the Government is taking all supplies brought into the country in the form of sheets.

PIG IRON.—As intimated last week, there was a strong probability that pig iron in the local market would drop in price. Quotations have been reduced from $55, the previous price, to $50 per ton. Domestic producers are pretty well sold up for some little time in the future, but any new business is being booked at the reduced price. The cut has come as a result of fixing of differentials in the United States.

LONDON MARKETS

LONDON, Nov. 13.—Merchants in this district are well satisfied with fall trade and are buying freely for their present needs. Spring booking is also good. Prices continue firm, with several advances. Doors and windows are higher for spring delivery. Oil heaters and hand sleighs have advanced.

Net Prices On Snow Shovels

London.

SNOW SHOVELS.—Net prices on some lines of snow shovels, figured from new list discount of 12½ per cent., are as follows:—Arctic japanned, $4 per doz.; Prince L.H. socket, $7.88 per doz.; King D.H., $10.50 per doz.; Moose D.H. and heavy, $13.12 per doz.

Sidewalk Scrapers

Sidewalk scrapers are quoted at $3.50 per doz., and dog at $5.25 per doz.

Oil Heaters Up 10 Per Cent.

London.

OIL HEATERS.—Perfection oil heaters have advanced about 10 per cent. New prices are as follows:—No. 525, $5.50 each; No. 530, $6.25 each. These prices less 25 per cent.

Screen Wire Cloth

Screen wire cloth for spring booking is quoted at following prices:—Painted black, in 100-ft. rolls, $3 per 100 sq. ft.; bronze cloth at 14c per sq. ft.

Lanterns, Globes And Chimneys Steady

London.

LANTERNS.—Cold blast in long and short pattern lanterns are quoted at $12 per doz. this week.

Globes

Lantern globes, in long and short pattern, are as follows:—One doz. to case, $1 per doz.; 3 doz. to case, 90c per doz.; 6 doz. to case, 85c per doz.

Lamp Chimneys

Prices on lamp chimneys are as follows:—No. 0 (6 doz. to case), $6 per case; No. A (8 doz.), $8 per case; No. B (6 doz.), $6.75 per case.

New Prices On Doors And Windows

London.

DOORS AND WINDOWS. — New booking prices have been made on doors and windows. The following prices are for crates of ½ doz. each. When crated in ¼ doz. the price is 60c per doz. higher. Booking prices are as follows:

No. 1 plain, grained only, $15.15 doz.; No. 2, with brackets (grained only), $18.70 doz.; No. 21, mission style, grained, filled and varnished, $22.60; No. 3, with brackets, grained, filled and varnished, $24.70; No. 8, panel, grained, filled and varnished, $26.65; No. 9, panel with oval top, grained, filled and varnished, $31.60.

Windows

New booking prices on windows are as follows:

No. 1, $2.95 doz.; No. 12, $3; No. 12½, $3.40; No. 13, $3.30; No. 14, $3.55; No. 14½, $3.75; No. 15, $4.05; No. 16, $5.60; No. 2, $3.90; No. 3, $4.25; No. 4, $4.55; No. 5, $5; No. 6, $5.40; No. 7, $5.80; No. 8, $6.25; No. 9, $6.85; No. 10, $8.40.

Advance On Hand Sleighs

London.

HAND SLEIGHS.—Higher prices are recorded this week on hand sleighs, bringing new quotations to 35 per cent. off list on the Canadian Buffalo make.

Flatware

Rogers' (1847) flatware is getting a good sale now at 45 per cent. off list prices.

Castle Builders

A good sale for Castle Builders exists now for Christmas trade. Following prices are quoted:—No. 0, $4 per doz.; No. A, $6; No. A A, $8 per doz.; No. 1, $12; No. 2, $24; No. 3, $48 per doz.

Fair Sale For Axes And Saws

London.

AXES.—There is a fair sale for axes this week at unchanged prices as follows:—Hunters' axes (red), $8 per doz.; boys' axes (red), $9 per doz.; handled axes (eagle), $13.50 per doz.; handled axes (Cherokee), $15 per doz.; axe heads—Keystone, $11 per doz.; Cherokee, $12.50; hand-made, $13; Welland Vale special, $12.25 per doz.

Bucksaws

A good sale exists for bucksaws at following prices:—Happy Medium, $8.70 per doz.; Prince Rupert, $11.70 per doz. Extra blades for these are quoted as follows:—Happy Medium, $4.85 per doz.; Prince Rupert, $7.10 per doz.

Good Sale For Food Choppers

London.

FOOD CHOPPERS.—There is a good sale for food choppers evident this week at following prices:—Universal—No. 0, $1.15 each; No. 1, $1.40; No. 2, $1.65; No. 3, $2.05 each.

Skates

Starr skates are unchanged at 30 per cent. off list.

Spades and Shovels

Spades and shovels are quoted this week at 30 per cent. off for 1sts, 20/2½ per cent. off for 2nds, 5 per cent. off for 4ths.

HARVEST TOOLS are quoted at 25 per cent. off list.

Good Sale For Ash Sifters

London.

ASH SIFTERS.—A good sale is reported this week for ash sifters at following prices:—Common wood sides, $2.15 per doz.; Banner, $2.90 each; Rocker No. 1, at $5.25 each.

Stall Fixtures

Stamped stall fixtures are quoted at $1.25 per doz.

Cow Chains

Cow chains are quoted at 12½ per cent. off list prices.

Rope, Nails And Glass

London.

ROPE.—There is no change this week in rope prices as follows:—Pure Manila, 39c base; British Manila, 33c base; New Zealand hemp, 33c; sisal, 27½c base.

Nails

There is likewise no change in nail prices at $5.45 base for wire nails and $5.75 base for cut nails.

Glass

Prices are firm on glass at 50 per cent. off for single and double diamond, and 40 per cent. off for cut lights.

Linseed Oil Up; White Lead Firm

London.

LINSEED OIL.—An advance of 13c per gallon has been made in prices on linseed oil this week, bringing new quotations to the following:

	Raw, per gal.	Boiled, per gal.
1 to 2 bbls.	$1.50	$1.53
3 to 5 bbls.	1.49	1.52
6 to 9 bbls.	1.47	1.50

White Lead in Oil

There has been no change in the price of white lead in oil as follows:

	Tons per 100 lbs.	Less per 100 lbs.
Pure lead	$16.20	$16.55
Pure Elephant brand	16.80	17.15

Turpentine Declines; Putty Unchanged

London.

TURPENTINE.—A decline of 2c has been made in the price of turpentine, bringing present quotations to the following:

	Per Imp. gal.
1 bbl. lots	75c
2 to 4 bbls.	75c
5-gal.	84c

Putty

There has been no change in putty, prices at the following quotations:—Standard putty, in 25, 50, and 100-lb. drums, $4.65 per 100 lbs.; pure putty, in 25, 50, and 100-lb. drums, $5.65 per 100 lbs.

WINNIPEG MARKETS

WINNIPEG, Nov. 12.—Among the most noted changes during the week is the decided weakness in galvanized and black sheets, which is of interest to all hardware dealers. Among lines that are advanced appear binder whips, stove pipe thimbles, velocipedes, express wagons, and batteries.

The warm spell throughout the West during the past 10 days has had a quieting effect on the stove trade in general. On the other hand it has enabled many of the dealers to get in more stock as the early cold spell found many unprepared to fill orders completely.

Shoe Thread May Advance

Winnipeg.

SHOE THREAD.—Shoe thread, which has been advancing steadily for the past three years, is expected to go still higher as reports indicate that the supply is limited and transportation facilities are becoming more difficult. To-day's markets are quoted herewith: Standard brand, No. 8, $2.05 lb.; No. 10, $2.15 lb.; Harp brand, No. 8, $1.95 lb.; No. 10, $2.05 lb.

Stove Pipe Thimbles

Owing to increased cost of material and labor a further advance has been made on O.K. stove pipe thimbles, making to-day's quotations as follows: 6 in. floor, $6.80 doz.; 6 in. wall, $6.80 doz.; 7 in. floor, $7.90 doz.; 7 in. wall, $7.90 doz.

Firm Prices On Wrought Iron Pipe

Winnipeg.

WROUGHT IRON PIPE. — Wrought iron pipe prices continue firm with fair demand. The manufacturers are unable to supply many sizes and stocks in general are rather broken. Prices quoted to-day are as follows:

	Black Iron Pipe 100 ft.	Galvanized Iron Pipe 100 ft.
¼ in. ga.	$ 6 08	$ 8 42
⅜ in. ga.	6 16	8 50
½ in.	7 83	9 63
¾ in.	9 95	12 38
1 in.	14 67	18 27
1¼ in.	19 88	24 75
1½ in.	23 76	29 57
2 in.	32 04	39 78
2½ in.	51 30	63 59
3 in.	67 05	83 16
3½ in.	84 92	....
4 in.	100 62	....
5 in.	135 00	....
6 in.	174 60	....

Velocipedes And Wagons Up 20%

Winnipeg.

VELOCIPEDES AND EXPRESS WAGONS. — Manufacturers of express wagons and velocipedes have announced an advance of approximately 20% made necessary by ever increasing costs. New prices are herewith quoted on a few of the more familiar lines, which are being booked for 1918 delivery:

Express Wagons, "Victor," No. 8, $18.25 doz.; No. 10, $21 doz.; No. 11, $26.40 doz.; No. 12, $31.80 doz.; No. 13, $34.80 doz.; No. 14, $37.80 doz. Velocipedes, No. 11, $3.50 each; No. 12, $4 each; No. 13, $4.75 each. Velocipedes with rubber tires, No. 11 R, $5.40 each; No. 12 R, $6 each; No. 13 R, $6.50 each.

Battery Prices Have Advanced

Winnipeg.

BATTERIES.—Prices on North Star batteries which have remained firm for the past few months again show an increase in price, due to ever increasing price of the different ingredients used in their manufacture, coupled with the difficulty of transportation, which has caused some of the battery concerns to shut down their plants awaiting the arrival of supplies. To-day's prices are quoted herewith:—

No. 6 Ignitor, barrels of 125, $30.50 per 100; boxes of 50, $31.50 per 100; quantities of 25 to 50, $34 per 100; less than 25, $39 per 100.

No. 8 Ignitor, barrels of 50, $80.50 per 100; boxes of 25, $82 per 100; kuantities of 12 to 25, $85 per 100; less than 12, $95 per 100.

Firm Prices On Strap And Tee Hinges

Winnipeg.

STRAPS AND TEE HINGES.—The usual demand at this season continues on all lines of strap and tee hinges with prices remaining firm and all stocks well sorted. To-day's ruling prices are herewith quoted:

Light tee and strap hinges, 10% off list; corrugated strap hinges, 4 in., $1.70 doz.; 5 in., $2.10 doz.; 6 in., $2.85 doz.; 8 in., $4.60 doz.; 10 in., $7 doz.; 12 in., $10.75 doz.; corrugated tee hinges, 4 in., $1.90 doz.; 5 in., $2.55 doz.; 6 in., $3.25 doz.; 8 in., $5.65 doz.; 10 in., $8.75 doz.; 12 in., $12.40 doz.

Black Wire Cloth

Prices for black wire cloth, unlike many of the other hardware commodities, show no advance and orders are now being accepted for 1918 shipment; mills, however, will only be able to supply a limited quantity and when this is sold no doubt a revision in price will be necessary. To-day's prices are: 100 ft. rolls, $3 per 100 sq. ft.; 50 ft. rolls, $3.10 per 100 sq. ft.

Further Decline On Iron Sheets

Winnipeg.

IRON SHEETS.—Further falling off of the United States market on sheets has had a favorable effect on the Canadian market, causing the second decline in the past 30 days. Galvanized sheets show reductions varying from 70c to 80c per 100 lbs. As predicted in HARDWARE AND METAL a revision would be necessary on black sheets as the former reduction did not leave sufficient spread. This has occurred in conjunction with the galvanized sheets and varies from 25c to 75c per 100 lbs. Bookings are now being accepted by Winnipeg jobbers for 1918 shipment at the following prices:

Galvanized sheets 10¾, $11.80 per 100 lbs.; 28, $11.40; 26, $11.10; 24, $10.95; 22, $10.95; 20, $10.95; 18, $10.95; 16, $11.25.

Black sheets—28, $10.25 per 100 lbs.; 26, $10.15; 24 and 22, $10.10; 20 and 18, $10.05; 16 and 14, $11; 12 and 10, $11.

Bamboo Binder Whips Advance

Winnipeg.

BAMBOO BINDER WHIPS.—Bamboo binder whips which last year sold for $3 doz. have been advanced to $4.50 per doz., and even at the advanced price the manufacturers will only be able to supply about one-third of the last year's output. Owing to the limited number of boats and increased ocean tonnage between America and Japan, dealers will be well advised to order early as this commodity will no doubt be off the market as soon as the available supply is booked. However, the more expensive varieties manufactured here will be obtainable as stocks on hand are deemed adequate to meet all demands.

PUTTY.—Prices on putty continue firm in spite of advances in materials entering into its manufacture. The demand continues good as many consumers are repairing their buildings in preparation for the winter months. To-day's prices are as follows: 100 lb. irons, $5 per 100 lbs.; 25 lb. irons, $5.30 per 100 lbs.; 1½ lb. tins, 9c each.

Turpentine

The market on turpentine remains steady and is quoted to-day as follows: Barrels, 80c gal.; ½ barrels, 83c gal.; 5 gal. lots, 85c gal.; 1 gal. lots, 85c gal.; plus the usual charge for containers.

Linseed Oil

No change is reported on linseed oil, which is still selling as previously quoted, viz.: Raw, bbls., $1.57 gal.; boiled in bbls., $1.60 gal.

PITTSBURG MARKETS

PITTSBURGH, PA., Nov. 12.—Monday evening, Nov. 5, basis prices were announced at Washington for sheets, tin plates, wire products, pipe, shafting and scrap.

The sheet prices announced were: Black sheets, 28 gauge, 5.00c; blue annealed sheets, 10 gauge, 4.25c; galvanized sheets, 28 gauge, 6.25c, all f.o.b. Pittsburgh. It is understood that the manufacturers will adhere to the same gauge differentials as formerly, but as these differentials would make 16 gauge blue annealed 4.45c and 16 gauge black 4.75c it is possible that the heavy gauges of black will sell at less than the permissible maximum. While these prices would have been considered quite unsatisfactory 30 days ago, on account of the break that has since occurred they are rather satisfactory, except that the differential between black and galvanized is considered too low. It barely covers the cost of coating, with spelter at 7.50c to 8.00c.

The tin plate price is $7.75, for 100-pound cokes, Pittsburgh. This price is eminently satisfactory to the tin plate mills, and it is evident that the Washington authorities were rather liberal, for various possible reasons, to stimulate production, to recognize the sacrifices the mills have made in the past season in diverting their product towards the food crops so fully when there was an attractive market outside, and to recognize the uncertainties in the pig tin supply.

The American Sheet & Tin Plate Co. will probably open its books in the near future for first half contracts, with regular customers who are manufacturing consumers. It is probable that no sales will be made to jobbers at this time. The independents may follow the example of the leading interest. At present they are selling for early deliveries, in some cases through January, and there is rather a heavy demand.

The only price on wire products announced is 3.25c. As this is the price to which the leading interest recently advanced the prospect is that the full schedule will be in accordance: Plain wire, 3.25c; galvanized wire, 3.95c; wire nails, $3.50; painted barb wire, 3.65c; galvanized barb wire, 4.35c.

The steel pipe price announced was 52, 5 and 2½ per cent. off list, on sizes ¾ to 3-inch. This means a 51 per cent. card, and the mills have accordingly issued lists dated November 6. Oil country goods, O. D. pipe and line pipe have been adjusted to this basis, and a boiler tube list is to be issued as soon as details can be figured out. The wrought iron pipe mills have issued lists dated November 6, but they conform precisely to their list of July 2, and it is a question whether this will suit Washington.

The shafting discount is 17 per cent., the market having previously been 10 to 5 per cent. off list.

Scrap prices announced are: Heavy melting steel, $30; cast borings, $20; wrought turnings, $20; No. 1 railroad wrought, $35, delivered at consuming point. On the whole these limits are somewhat above the open market prevailing and it is not likely the market will change materially.

Coke Prices Fixed

Recent reports that the Fuel Administration would reduce the price of coke are set at rest by the Fuel Administration last night that it had set prices of $6 on furnace and $7 on foundry coke, per 2,000 lbs. at ovens east of the Mississippi River, to cover coke made in ovens without recovery of by-products. This apparently excludes gas house coke, and possibly leaves room for a lower price to be set on by-products coke. Brokerage, if any, is to be paid by the seller, representing a different rule than obtains with coal, as a 15-cent brokerage is allowed on coal, to be charged the buyer.

Unfilled Tonnage Decreases

The Steel Corporation's unfilled tonnage at the end of October, announced to-day, was 9,009,675 tons, representing a decrease during October of 823,802 tons against decreases averaging about 500,000 tons a month in the preceding four months.

Production Increase

Production was somewhat heavier in October, pig iron being produced at the rate of 39,250,000 tons a year, against a rate of 38,500,000 tons in September. The average rate since January 1 is about 39,250,000 tons against actual production in 1916 of 39,434,797 tons.

Monthly production of steel ingots is reported for the first time. The October output was larger than the average of preceding months, being at the rate of about 43,600,000 tons a year, while the estimated production for the year is 42,600,000 tons, against 40,400,000 tons in 1916. Capacity is not fully employed in the case of either blast furnaces or steel mills, by reason of the shortage of coke.

WEEKLY PAINT DEPARTMENT

PAINT--Developing Export Markets

Industry Has Been Very Prosperous, Despite the Lack of Building Activity — New Markets Being Opened in Australia and New Zealand — Marine Demand is Becoming a Very Promising Factor in the Situation.

LIKE every industry that is more or less dependent upon the erection of new buildings for a continuation of the volume of domestic orders, the paint industry in this respect has been in an even more unfavorable position during the year 1917 than in 1916, inasmuch as building operations have fallen below last year's mark. House painting, therefore, which always has produced the largest bulk in orders of any division, still calls for a far smaller quantity of the output than in normal times, although the present year has seen a revival of business for properties already standing. There is more truth than fiction in the adage, "Everything comes to him who waits." Painting cannot be put off indefinitely any more than repairs can postpone the purchase of a new pair of shoes beyond a limited period.

And yet, in so far as can be determined from an estimate of reports from various manufacturers, this year will rank as the best in the paint industry in Canada. The refurbishing of equipment by the railways, to cite only one instance, has been an even more fruitful source of business this year than last. Car building for months past has ranked as a substantial item in the demand for paint that has supplemented maintenance requirements.

But apart from these more or less normal requisites there have developed several promising factors that are likely to stand the paint industry in good stead for years to come, and will enable it to forge ahead in gross sales and net profits when domestic needs return to normal.

One of these consists of a tendency to make the Canadian industry more self-centered in so far as the manufacture of some chemicals are concerned, for which, before the war, dependence was had on Germany. The United States, however, still continues to be the main source and with the growth of home manufacture this year imports of raw materials have grown almost correspondingly.

Shipbuilding Creates Orders

A distinctly new line that is opening up with bright prospects for many years is what is called the "marine" end. This is the natural outcome of the recent development of shipbuilding, and the revival of the old industry of making wooden ships. During the year more than one paint manufacturer organized a "marine" branch, and the names of several Montreal paint firms adorn the directories of Vancouver, B.C., for the first time. Fifty new vessels that are building in British Columbia at a cost of $25,000,000 to the average mind connote the coming transportation of munitions and foodstuffs; to the paint man they hold out visions of paint orders aggregating many hundreds of thousands of dollars. The activity of the Imperial Munitions Board in developing ocean carriers in Canada has set the paint factories on the tiptoe of expectation, and big orders are just beginning to flow in. This is counted upon as furnishing a considerable output for paints in Canada for years to come, and recalls, in the case of at least one company, a source of business that flourished in the Maritime Provinces within the last half century.

Developing Export Markets.

While waiting for domestic business to resume, enterprise has been directed to seeking new markets, and with very promising results. Besides the United Kingdom there has been a fair export trade with the British West Indies, Newfoundland, Mexico, Cuba and South America.

To these have been added Australia, New Zealand and China, and, in so far as shipping facilities would permit, the two former have been good customers. A white lead factory is being located in Australia by one manufacturer, and future business, it would appear, should grow steadily after the war when the scarcity of bottoms is not as acute as at present.

How Exports Have Grown.

Figures from the official government returns will illustrate the growth of exports as a war development. Side by side with these may be placed the imports, and both sets of figures should be qualified by discounting the totals to cover heavy advances in values since shortly after the war began.

	Exports	Imports
1911	106,260	1,594,934
1912	115,657	1,760,126
1913	166,545	2,403,011
1914	175,723	2,167,440
1915	212,167	1,568,867
1916	371,086	2,056,085
1917	1,033,233	3,065,289

The exports for the year ending March 31, 1917, were almost three times what they were for 1915-16. The exports are now ten times what they were in 1911; the imports have less than doubled.

The following table shows the destination of a large portion of Canadian exports, half a million to the United Kingdom alone, but this includes South Africa and other countries. This amount is nearly eight times what it was two years ago. Newfoundland is proving a good customer.

	1915	1916	1917
United Kingdom	70,287	204,002	547,316
United States...	20,705	43,817	107,580
Newfoundland..	42,880	39,948	67,000
Other countries.	35,582	62,531	241,102
	*169,454	*349,298	*962,998

*There were small shipments in addition of "foreign produce," as distinct from these three amounts which were "Canadian produce."

Coming to the operations of individual concerns, it is understood the majority will be able to report not only increased gross earnings, but net profits as well. The two are not necessarily co-related, as would be the case in normal times. During the year 1915 and part of 1916 raw materials still remained on hand that had been purchased before the war, or before prices appreciated to any great extent. For this year much higher prices had to be asked by the manufacturers to cover higher costs, and for some months it was doubtful as to whether the margin of profit would be as large as before. It is generally conceded that net earnings have held up.—From *The Financial Post.*

JAMIESON'S
PURE PREPARED PAINTS

DON'T allow your paint business to lag throughout the fall and winter. People are inclining to these two periods more and more to do their painting. They have more time. Push a good thing along, encourage the practice among your customers and keep your paint lines well to the front—it will pay you well.

Your customers are keeping a diligent eye to the practice of **economy**, yet they want reliable products. **Economy** and **reliability** go hand-in-hand in JAMIESON'S PURE PREPARED PAINTS.

Are you selling the Jamieson line? They have a steady sale the year round. Get our proposition.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Nov. 14.—Two advances within the past week have sent linseed oil up six cents per gallon, while some jobbers are quoting even higher prices. Even at this there is a firmness of tone and crushers say that the tendency is to higher levels owing to the difficulty of getting flaxseed. The movement of this is slow and only within the past few days seed advanced ten cents per bushel. It would not be at all surprising if the trend is upward still within the week. Orders are being filled by some dealers even at higher prices than the six cent advance calls for. There is no change in the price of putty, but a good volume of business is passing among dealers. Many orders for spring are being received for mixed paints, while the sorting business has been fairly good. White lead in oil is not of much interest and just a fair movement is reported. Turpentine is being sold at last week's prices. The fine weather obtaining in many parts has stimulated outdoor painting considerably.

Linseed Oil Up Six Cents And Tendency Is Higher

Montreal.

LINSEED OIL.—As pointed out last week in HARDWARRE AND METAL, the linseed oil market was very firm. Since then there have been two advances in price, due to a ten-cent increase in the price of flaxseed, there being one advance of two cents per gallon in oil and another on Tuesday of four cents, making six cents in all. The market is firm at the advanced price and some uneasiness is felt regarding the immediate future. This is to be accounted for largely through the lack of transportation, which may be more limited as the need for transport ships for American troops becomes greater. It will, therefore, be interesting to watch this market closely for the next few weeks. Orders are passing freely and in some instances wholesalers have made even a greater advance than 6 cents per gallon. We quote as follows:

Linseed Oil—	Raw, Imp. gal.	Boiled, Imp. gal.
1 to 2 bbls.	$1.38-$1.41	$1.40-$1.43
3 to 5 bbls.	1.37- 1.40	1.39- 1.42

Turpentine Prices Held Unchanged

Montreal.

TURPENTINE.—Due to the primary situation there is a weaker undertone. There is a fair movement with some jobbers, while with others the demand is quite light and few sorting orders are received. This is a season when turpentine is not in demand to any great extent. Quotations are being made as follows:

Turpentine—	Per Imp. gallon
5 bbls. and over	$0.73-$0.75
1 barrel lots	- 0.75
Small quantities	- 0.83

Not Much Movement Of White Lead In Oil

Montreal.

WHITE LEAD IN OIL. — While the volume of business obtaining in white lead in oil is small, there is a tendency to firmness with prices maintained as given last week. There has been a tendency to firmness due to the trend of the pig lead market. Paint makers are using large quantities themselves just now, but there is a gradual tendency to the popular mixed paint and the annual output of white lead in oil is growing appreciably less through the country. With unchanged quotations we quote the following prices: Five ton lots, $15.50 per 100 lbs.; one ton lots, $16 per 100 lbs.; in lesser quantities, per 100 lbs., $16.35.

Mixed Paint Is Unchanged; Sorting And Booking Good

Montreal.

MIXED PAINTS. — The movement in mixed paint this week is reported to be very satisfactory for the season of the year. The number of sorting orders received is better with some makers than in previous seasons, while with all there seems to be a satisfactory demand. The spring business is looking up well and there seems to be little tendency upon the part of dealers throughout the country to refrain from placing business for spring. Selections are made with care and quantities are perhaps not so heavy in some cases as in former years. All through, however, there is a good movement, with prices firm and unchanged.

Putty Is Very Steady And Movement Is Good

Montreal.

PUTTY.—There is still a very active movement in putty, but no changes have occurred in price. The tendency is to a firming of price, however, owing to the situation in linseed oil. If linseed oil continues high, as dealers and crushers alike consider very likely, the market for putty will remain firm with higher levels probable. Jobbers here report a brisk movement, for the most part, and the stocks in hand are good. Quotations here are as follows: Bulk in casks, $3.60 per 100 lbs.; bulk, in 25, 50 or 100 lb. drums, $4.45; bladders in barrels, $3.75 per 100 lbs.

TORONTO

TORONTO, Nov. 15.—The features of the week have been the big advance in linseed oil and the lower price on turpentine. In some instances the advance on linseed oil amounted to 13c per gallon. Higher prices have been induced through a scarcity of spot seed and also to the fact that much of the crop is still in the fields in the Canadian West and snow has covered it in some districts. Turpentine was lower as the result of conditions in the primary market. White lead in oil held steady in price, there being a measure of firmness in the market as a result of the firmer tendency in pig lead. Booking orders for spring paint delivery are reported good, being fully up to last year at this time. Sorting business is somewhat quiet at present.

Linseed Oil Makes Big Move Upward

Toronto.

LINSEED OIL.—There was a spectacular movement in the price of linseed oil during the week when prices advanced from 6c to 13c per gallon in certain instances. Higher prices were induced through the condition in the flaxseed market. On the November option prices advanced from $3.09 on Thursday of last week to $3.32 on Tuesday of the present week, a gain of 23c per bushel. On Wednesday, however, there was a big slump in the price of flaxseed and quotations were 14c per bushel lower than on the previous day. Under the influence of the advancing tendency in the seed during the week the low quotations of last week were moved up 6c per gallon while in some quarters an advance of 13c per gallon was registered, which moved the higher quotations up to $1.50 per gallon for raw linseed oil. As a result of the slump on Wednesday's market there was an easier tone prevailing and carload prices were reported to be quoted lower than the previous day's quotations. At the opening of the flaxseed market on Thursday there were indications of a slightly firmer tone than the close of the previous day. What is the disturbing influence in the grain market is not apparent on the surface. Reports from some quarters assert that the farmers in the West have been moving their grain in preference to flax and that snow has covered it in the fields in certain parts. But there has been a good movement of seed during Saturday of last week and the first three days of the present week,

Will Keep Our Factories Busy

In 1912-13 Canadian Manufacturers exported goods to the value of $ 44,000,000

In 1916-17 they exported goods to the value of $477,000,000

This represents Ten Dollars in 1916-17 to every One Dollar in 1912-13. Is it any wonder Business is Brisk?

But the British Government cannot go on buying in Canada unless Canada lends her the money. So the Canadian Government is asking everyone to

Buy Victory Bonds

Much of the money so secured will be loaned to Britain and every dollar will be spent in Canada for Canadian products.

If we want to keep business good every one of us must buy a Victory Bond, even if it is only for $50.

This space contributed by
BRANDRAM-HENDERSON, Limited
Manufacturers of White Lead, Paints and Varnishes

as no less than 117 cars passed inspection at Winnipeg during those days. This may acount for the slump in price on Wednesday of the present week.

	Raw, Imp. Gal.	Boiled, Imp. Gal.
1 to 2 bbls.	$1.38-$1.50	$1.40½-$1.53
3 to 5 bbls.	1.38- 1.49	1.40½- 1.52
6 to 9 bbls.	1.37- 1.47	1.39½- 1.50

Turpentine Declined Two Cents Per Gallon

Toronto.

TURPENTINE.—The easier feeling noted in these columns last week as taking place in the primary market for turpentine continued during the week, where a further decline of 1¼c per gallon was recorded. This makes a full decline of approximately 4c per gallon within the past two weeks in the market at Savannah. As a result prices in the local market declined 2c per gallon from the higher range and quotations were narrowed to 74c and 75c on single barrel lots. The fact that there is no export trade is operating as a depressing factor in the market. There has been a rather light demand for turpentine as painting operations have not been extensive during the week.

	Imp. gal.
1 barrel	$0.74-$0.75
2 to 4 barrels	0.73- 0.74
5 gallon lots	0.81- 0.82

Reports On Booking Orders Continue Good

Toronto.

MIXED PAINTS.—Manufacturers report that booking business during the week has been very satisfactory. One large manufacturer stated that orders in this respect are fully equal to last year at the same period, while representatives of another manufacturer stated that orders are ahead of the same period last year. Manufacturers are protecting their customers against a decline in price in that they will give them the benefit if any decline should take place. At the present time there is no intimation that lower prices are likely to prevail. Sorting business has been somewhat light during the week.

White Lead In Oil Holds Unchanged

Toronto.

WHITE LEAD IN OIL.—There was a firmer undertone to the market for white lead in oil during the week as a result of the stronger tone to the pig lead market. Conditions in the latter market held in about the same position as last week but the feeling was one of strength. Demand for white lead in oil is very light under existing conditions. Quotations are made on the basis of $16.20 per hundred pounds in ton lots and $16.55 per hundred pounds in less than ton lots.

Movement Of Glass Is Reported Good

Toronto.

GLASS, PUTTY.—With an extra demand for glass by reason of fitting storm windows and doors wholesalers report there has been a good movement of glass during the week. Prices are holding at firm levels with quotations still made on the basis of 50 per cent. off list. There is a feeling among dealers that higher prices can be considered a possibility in the not distant future. Plate glass and fancy glass were also in steady market so far as quotations are concerned. Putty held unchanged at the readjustments noted last week. With the putting in of glass on fall repair work there has also been a fairly good demand for putty. Putty is quoted on the basis of $3.80 per hundred pounds for bulk in casks, $4.55 in 100-lb. drums and $4.65 in 25-lb. drums. Bladder putty in barrels is quoted at $4.90 per hundred pounds.

PAINT FOR IRONWORK PROTECTION

For the protection of ironwork paint is generally used, and provided that rusting has not commenced a paint composed of four parts of red lead, one part white lead ground in oil and at least five years old and sufficient raw linseed oil of good quality will be found very efficient if used when freshly made. No driers are needed, as the red lead is a very good oxidising agent, but the paint takes several days to dry and harden. For ironwork red oxide of iron also makes a good paint if no driers are used and the oil is good, but if driers are used the paint soon fails when exposed.

EXPANSION OF CANADIAN INDUSTRY

A general expansion in the manufacturing business of the Dominion is shown in statistics just issued in the postal census of the manufacturers of Canada for the year 1915. The number of establishments in operation was 21,306, representing an invested capital of $1,994,103,272, employing 52,683 persons on salaries and 462,200 persons on wages and producing goods to the value of $1,407,137,140 from raw materials valued at $802,135,862.

During the decade 1905-15 the number of establishments increased by approximately 34 per cent., capital 135 per cent., employees on salaries 44 per cent., employees on wages 29 per cent., salaries 96 per cent., wages 70 per cent., and the value of products 95 per cent.

The value of the products of factories in 1915 was $1,407,137,140, as compared with $718,352,603 in 1905, an increase of $688,537, while wages paid totalled $229,456,210, an increase of $95,080,285.

There were in Canada during the year covered by the statistics 65 establishments employing 500 hands, 25 employing over 1,000, nine employing over 2,000, five employing over 3,000, and three employing over 4,000. Of these three establishments two employed over 5,000 hands.

During the five-year period, 1910-1915, the capitalization of Canadian industrial enterprises increased by $746,520,663, or about 60 per cent.

CATALOGUES and BOOKLETS

NEW CATALOGUE OF "BEAVER" TOOLS

The Borden Company, Warren, Ohio, has just issued its 1918 catalogue of "Beaver" easy working die stocks and square-end pipe cutters.

This catalogue is very attractive in appearance, being printed in two colors, on high-grade paper. It illustrates the complete line of "Beaver" easy working die stocks and square-end pipe cutters.

Several new "Beaver" tools are shown for the first time in this catalogue, one of these being the new No. 3 "Beaver" junior ratchet die stock, which is built on the unit plan to thread pipe from ⅛ in. to 1 in. inclusive.

The Borden Company will send a copy to any of our readers on request.

STOCK LIST ISSUED

Under date of November 1 the Tallman Brass and Metal Co., of Hamilton, have issued a 24-page stock list, giving a list of products which they have ready for immediate shipment. In addition to their line of babbitt metals, such lines as brass and copper rod, tubing, sheets, etc., are listed. This stock list is punched so that it may be hung up.

ATTRACTIVE BLOTTER ISSUED

The Consumers Cordage Co. have issued a very useful blotter, three sheets of blotting paper being held to an attractive celluloid top by a blue enamelled clasp. The celluloid top, besides showing some of the firm's products has a lion in the background. The blotting paper can be renewed as wished. These blotters will be sent on request to the head office in Montreal.

A UNIQUE STEEL

Recent advances in British steel manufacture are indicated by the description of a certain steel which now forms part of the regular product in a Sheffield works. The two properties of toughness and hardness are combined in a hitherto almost unknown degree; the material is so hard that no cutting tool will act on it and so tough that a rod may be bent double while cold without fracture. Any shaping or finishing required must be done by grinding. It is made in castings, rolled bars and sheets, and forgings. It is mainly used for crusher jaws and rolls, dredger bucket lips, screening bars, gears, pins and bushes, and points and crossings of railways and tramways. It is also used now for light body armour, such as helmets and shields, and for car and machine gun armour plating. A great many more uses will be found for this material. Its strength is 55 tons tensile and elongation 40 per cent. in 4 in.

"And Berry Finishes are Best for the Kitchen too."

From kitchen to front door there is a dependable Berry product for every finishing need.

In these days of high labor costs this comprehensive value appeals strongly to the consumer, as it costs no more to produce a beautiful and permanent finish with these products than with the kind that wears out in a few months. The difference in the price per gallon is trifling.

Liquid Granite Floor Varnish, Luxeberry Enamels, Luxeberry Wood Finishes, Luxeberry Wall Finishes and Luxeberry Spar Varnish are among the many "Berry" brands whose names are household words to all users of varnish.

The "Berry" label is the only selling argument needed.

Ramsay's Paints

The Right Paint to Paint Right

Now is the time to get in line with the Ramsay man. He is always pointing upwards to the name that means greater sales and more profits for you.

Be a Ramsay agent and expand your business.

Write us for particulars

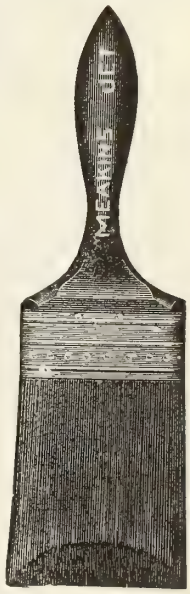
A. Ramsay & Son Company, Montreal

TORONTO Established 1842 VANCOUVER

Big Market for Brushes

Will you let us say to you that there is a much larger market in every community than is generally perceived. We make a hundred or more different kinds of brushes. For example, there are **Meakins Brushes** for horse stables and carriage cleaning, for garages and automobile needs, for butchers, barmen, stove-makers; for walls, radiators, floors, bannisters, cornices; for kitchens, parlors, schools; for cream separators, gun barrels, bottles.

We do not suggest that you carry stocks or even a sample of every variety of brush, but we do suggest that you have our catalogue and familiarize yourself with our various brushes in order to be able to suggest the right brush to the right person for the right need.



Sell from our Catalogue—Just a last word: Meakins Brushes are good brushes—and our catalogue will tell you why. Our catalogue is valuable. Have you a copy?

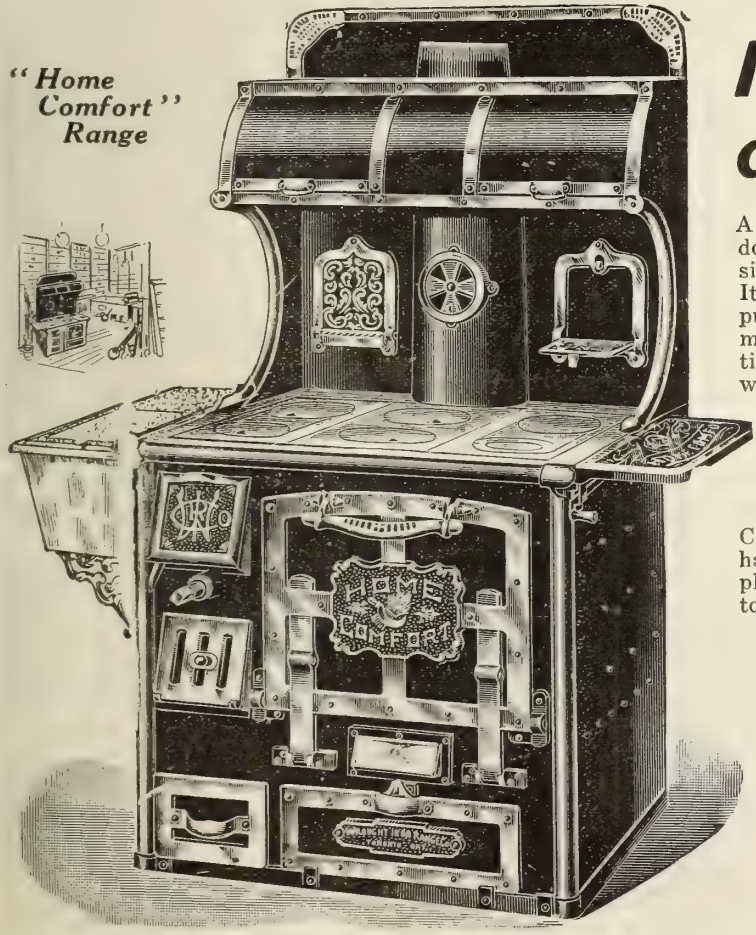
The Psychology of the Counter Display

A counter display of Moore's House Colors gets home its arguments at the most advantageous moment — when the prospective paint buyer actually has his hand in his money pocket, and is prepared to make a purchase. There are plenty of householders coming into your store each day who are intending to paint, but keep putting it off or forgetting. An attractive counter display is just the reminder needed to turn these prospects into buyers.

That suggestive arrangement on your counter is a memory-jogger that they can't ignore. You'll get many a sale of Moore's House Colors through a counter display. Try one to-day.

Benjamin Moore & Company, Limited, West Toronto

"Home Comfort" Range



It's Wise to Sell a Single Model

A dealer acting as agent for the "HOME COMFORT" doesn't have to keep a big stock. We make only one size and one style. This simplifies matters a whole lot. It used to be, and still is, the custom for the dealer to put forward on his floor the simplest and cheapest model of a range, and to sell his customers this particular range. Then having made the sale, the dealer would proceed to induce the customer to buy extras. For this purpose, the more expensive models kept in the rear would be used for the purpose of demonstration.

Experience has taught a good many dealers that it is wiser to sell but one model, a model like the "HOME COMFORT." It saves time and money—dealers do not have to carry a large stock. This single model plan pleases the customer, too, and makes it safe and easy to make a choice.

We have made the "HOME COMFORT" the most easily sold range on the market. Write for agency proposition. It's a good one.

THE SHERWIN-WILLIAMS VARNISHES

Your customers will require varnishes that are durable and impervious to severe weather to brighten up their homes and give them a finish which meets all their requirements.

3 VARNISH LEADERS

MAR-NOT is a tough, durable floor Varnish; made to withstand the scuffing of heels, tramping of feet, and denting by furniture. It being a waterproof varnish, there need be no fear of leaking radiators discoloring or affecting a floor finished with S-W Mar-Not.

SCAR-NOT—The ideal varnish for all interior woodwork. A finish that "Stands Up" and maintains a beautiful polish. A splendid finish for tables where there is an excessive use of hot plates, etc.

REXPAR—The king of all outside Spar Varnishes. Made specially to battle with the elements—can be used wherever the surface is exposed to sun, rain or wind.

These are three varnishes which your customers will demand, so be prepared to meet the demand which we have created. If you are not already a Sherwin-Williams Agent, write us about our agency proposition.

Write for our new Introductory Maple Leaf Paint and Varnish Proposition.

MAPLE LEAF
M L
FINISHES THAT ENDURE
QUALITY
PAINTS & VARNISHES

The paint for the man with his shirt-sleeves up

—with a Saturday afternoon on his hands and a little job of painting to do —he becomes a critical Paint buyer and user.

He watches that job and he keeps in mind the service that his Paint gives—because he does the painting himself.

When he uses

MAPLE LEAF Paints and Varnishes

—other Saturday afternoons and the other little jobs that turn up bring him back for more *MAPLE LEAF.*

DON'T OVERLOOK THE LITTLE THINGS—the little sales of pints and quarts mount up in your Paint Department if the service given satisfies the man or woman who does the odd jobs in odd times.

And some day they will lead to bigger sales. Little or big the sales of MAPLE LEAF lead to more sales little and big—it is the "more" sales trailing along surely after the first sale that makes MAPLE LEAF agents smile when they strike a balance in the Paint Department Ledger.

There Is Nothing Equal To

LINGERWETT

For Removing Paint or Varnish

No matter how hard or tough the paint or varnish may be LINGERWETT will lift it easily and without hard labor and will do it without any injury to the surface of the wood.

Lingerwett stays wet, that's the secret. It softens paint, varnish or shellac and remains wet giving the operator plenty of time to remove it without hard scraping.

Put LINGERWETT on your shelves and recommend it to your customers—it will bring good business to you.

The Best Share for Every Plow

CRESCENT FORGE & SHOVEL CO. — TRUE FIT TRADE MARK — HAVANA, ILL. U.S.A.

CRESCENT PLOWSHARES

Fit Practically Every Plow in Western Canada

OUR WARRANTY: We warrant all goods of our manufacture to be made of the best quality of steel for the purpose intended, and to be made in a workmanlike manner. Fitted plowshares are warranted to fit the plow for which they are intended. The fit of every share is carefully tested before leaving the factory, and every precaution is taken to prevent mistakes, which occasionally occur. Should any share prove defective in fit, material or workmanship, it will be cheerfully replaced free of charge.

Made in Over 1000 Patterns

For the Indoor Painting Season

Keep your paint sales up. People are now living indoors, which means an increased demand for inside paints. Show your customers how they can make over their floors at less cost than buying carpets and also make the housework lighter by using Crown Diamond Floor Paint. This is but one of the quick selling Crown Diamond Paint Products. There are many others which will mean a rapid turnover of your paint stock as well as a generous profit to you. It will pay you to write now for full information of the complete line.

The Economy Ash Sifter fits this new need

The scarcity of fuel and its high price are rapidly adding to the ranks of those saving folk who have always sifted their ashes. These new "recruits" are men who never before considered the possibility of sifting their ashes. The idea of sifting ashes is repugnant to them, but necessity drives. The old-fashioned shaker sifter with all its dust and hard work will certainly not appeal to these men. They'll want the "Economy"—easy to operate, absolutely dustless, q u i c k, effective. They'll want a sifter that practically does all the work itself and raises no dust in doing it.

Fits
18" Barrel
or Can

You should sell every one of these new members of the "sifter army" an "Economy" Ash Sifter, and one of our 18-inch Ash Cans to complete the outfit.

Garbage and Ash Cans

A complete line of extra strong, reinforced galvanized steel, circular cans in popular sizes suitable for homes, schools, office buildings, hotels and institutions. These are built to withstand the hearty attentions of husky garbage collectors, and have given plenty of service wherever used.

Check up your stock to-day on these two seasonable lines and let us know what you need to put you through the season.

Large Stock. Prompt Shipment. Special Dealers Prices.

Yes! it does pay to sell "DELTA" FILES

Dealers find that the co-operation we give them makes files sales easy and helps to bring new business to their stores.

DELTA FILES once sold to a customer establish a permanent good-will—the Extra Durability and Lasting Cutting Edge of these files prove of great advantage to the user, cutting down file expenses.

The dealer who sells his customers *Delta Files* establishes a good-will toward his store that brings the customer back for other articles. Thus do these files help to establish pleasing relationship between the dealer and his customers.

Let us send you full particulars of our agency proposition and our co-operative helps.

DELTA FILE WORKS

J. H. McCOMB, LIMITED Manufacturers of all kinds of Building Paper, Pitch and Coal Tar MONTREAL

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly; packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Only through your jobber to-day.

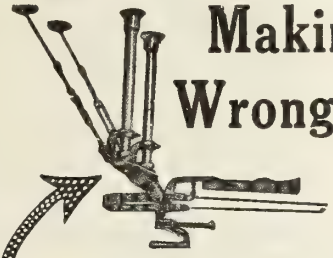
Making the Wrong Change



It's done every day, and the chances are you get the worst of the error-making. But you don't want errors; you want accuracy. Will you allow us to send to you, in the form of printed matter, the remedy for wrong change-making. And you'll get some brand new ideas about store keeping. Costs but a post-card for request.

GIPE-HAZARD STORE SERVICE CO., LTD.

HOYT METALS

MEMO
NOV. 17th.

for your Babbitt Metal file

Selecting Raw Materials

Of paramount importance in the manufacture of metal alloys is the selection of the raw materials used.

This has always been a Hoyt strong point.

Our splendid buying connections gives us the world to select from and enables us to not only select the best, but to get the best possible price.

What this means to you as a user or seller of Hoyt metals cannot be over-estimated. It means, to say the least—right goods at right prices—alloys that stand the test.

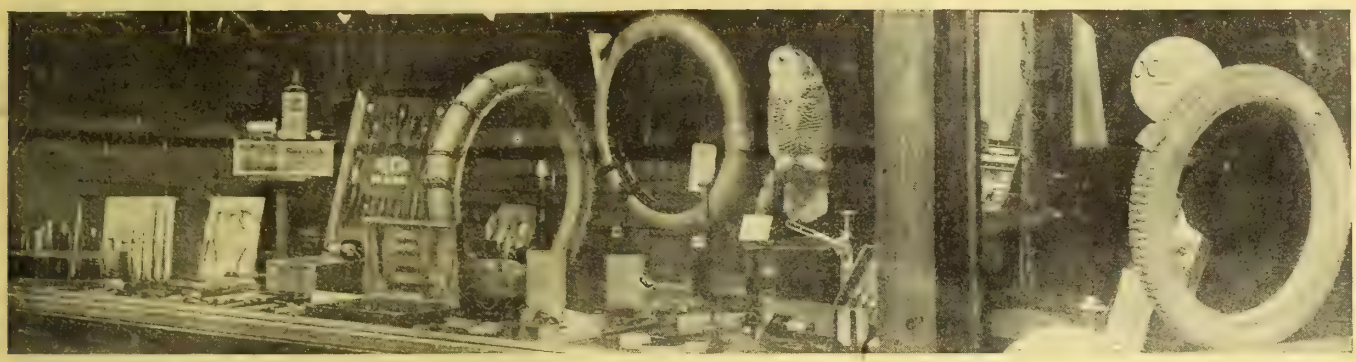
Works: Riverside Street, Montreal

WINNING THE BUYER'S FAVOR

THE best possible buyer is not made an actual buyer at a single step It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising. Under ordinary conditions it should not be expected to do more.

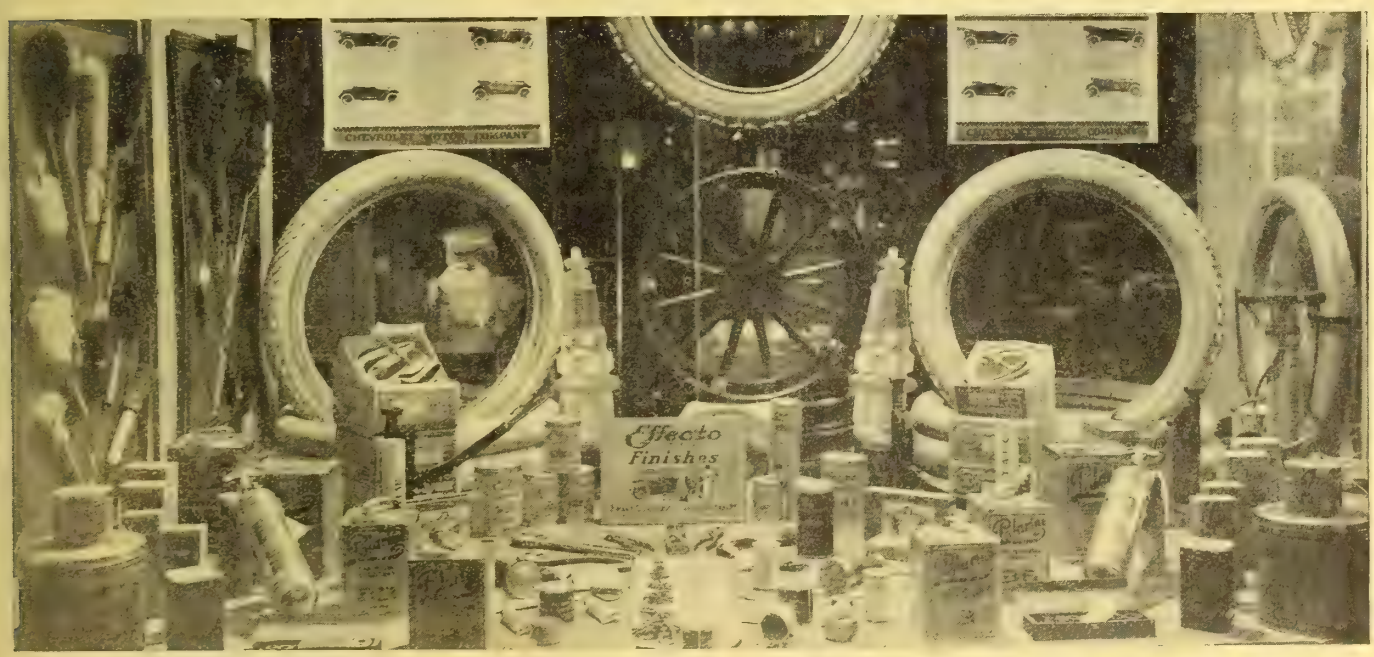
AUTO ACCESSORY AND SPORTING GOODS SECTION

These Pictures Show How Automobile Accessories are Displayed and Pushed by Canadian Retail Hardware Dealers:



Cowan's Hardware, London, Ont., is making an aggressive bid for Auto Accessory Trade. Above illustration shows a section of their window display.

Auto Accessories are prominently featured by the James Walker Hardware Company, Montreal. They catch the eye and get the trade.



Auto accessory window display by Ecclestone Hardware Company, Bracebridge, Ont., a town of 3,000.

The argument is: The Canadian Hardware Merchant will display and push your line if you solicit him to do so, using HARDWARE AND METAL to cultivate acquaintance, favor and faith.

Canada's Victory Loan

Will Keep The Workers Busy

When the war started many people predicted the ruin of Canada's industries.

But time has shown that the natural resources and basic industries of Canada are of immense importance in helping to keep Great Britain supplied with food, munitions and equipment.

Because of this, there has been a steady cash market for the farmers, as well as plenty of work at good wages for all the workers in other lines of industry.

But now the time has come when Great Britain can purchase her supplies on this side of the Atlantic only on credit. If Canada *does not* grant this credit, Britain will be obliged to place her orders where credit is available. If Canada *does* grant this credit our cash markets will be continued and the workers kept busy.

The Only Way to raise the money needed to establish this credit is by borrowing from all the people of Canada through the sale of Victory Bonds.

Every man and woman in Canada, therefore, is vitally interested in the success of Canada's Victory Loan, for upon its complete success depends the continuance of Canada's agricultural and business prosperity.

VITAGAS
TRADE MARK

—"a wonder in the Automobile World"

ONCE TRIED—ALWAYS USED. 50% MORE POWER

Gives a big increase in mileage from gasoline and removes carbon troubles and the wear and tear in the operation of having carbon removed.

Vitagas has been endorsed by the most critical, so much so that one of Pittsburgh's automobile experts has pronounced it to be "a wonder in the automobile world."

A Gasoline Tonic.

Just as a tonic will build up and strengthen the blood of man, so Vitagas purifies and strengthens the elements of gasoline, giving it 25% to 75% MORE EFFICIENCY.

Ideas that sold the goods

No. 7 of a Series of Prize Stories by Men Behind the Counter

What has an egg tester to do with an Eveready DAYLO? Sounds like that familiar conundrum, "Why does a chicken, etc"? But Mr. W. E. Angle of the Angle Company, Piqua, Ohio, will tell you the answer. Read his story, which follows. Necessity is the mother of invention all right, and invention mothers many a good sale.

Last spring a man who had bought an incubator stated that it was not equipped with a satisfactory egg tester, and inasmuch as eggs are tested twice during incubation a good tester is a necessity. It immediately occurred to me that an Eveready would provide plenty of light for this purpose if the light could be concentrated. I called the man's attention to our Eveready line, and picking up a number 2632, I asked my prospect to step down into the basement where we had an incubator.

I hunted up a cardboard box slightly larger than the light, removed the lid and tacked the box on the top edge of the incubator. I then cut a round hole about an inch in diameter in the front end of the box and placed the light inside with the lens directly opposite the hole. After turning on the light I replaced the box lid, and taking an egg out of the incubator, we found that by holding it over the hole the germ cell showed plainly.

I then showed my prospect that he could have the free and uninterrupted use of both hands while testing the eggs, and that by using this kind of a tester there was absolutely no danger of getting oil on the eggs and thereby spoiling the hatch, as is frequently the case when oil testers are used.

Then to clinch the sale I showed my prospect—

How convenient the light is for observing the thermometer of the incubator.

That the case was all brass, heavy nickel-plated and would last indefinitely.

The advantage of the Eveready switch, over the push button, when a permanent contact is desired.

The long-lived Tungsten Battery with its eight to twelve hours of guaranteed service, and the sturdy little Eveready Mazda Lamp.

That the case is thoroughly insulated with no possibility of a short circuit from contact with other metal objects.

I had no trouble making the sale after presenting these facts. I then emphasized, as I always do, that we carry a complete stock of genuine Eveready Tungsten Batteries and Eveready Mazda Lamps for renewal and that Eveready DAYLO'S, when used in connection with the proper type of Eveready battery and lamp, give absolute satisfaction.

Work with Us

In every city, town and hamlet in America defence is the issue of the home. Naturally at this time men turn to the question of whether their own homes are properly protected. This means an enormously increased demand for *safe* revolvers,—for Iver Johnson revolvers.

IVER JOHNSON
Safety Automatic **REVOLVER**

We have started a big advertising campaign in the Saturday Evening Post and the other leading magazines with advertisements featuring home defence, reminding men of the duty of home protection and of the famous "friendly" Iver Johnson Revolver as the safe weapon for the home.

The hardware dealer in every town who links his store with our advertising will reap the profits of this demand for safe revolvers. Be that dealer. Order a complete stock now of Iver Johnson Hammer and Hammerless models with Regular, "Perfect" Rubber and "Western" Walnut Grips. Send for free booklet "A" on firearms.

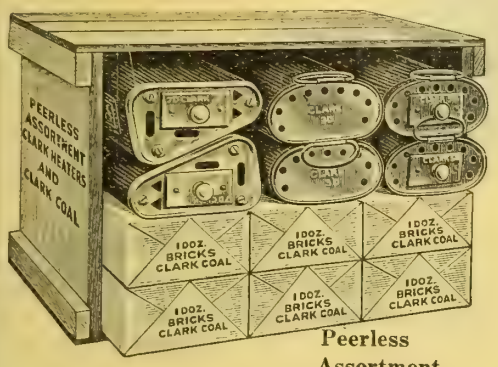
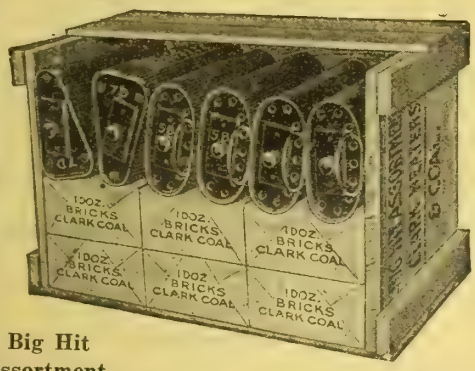
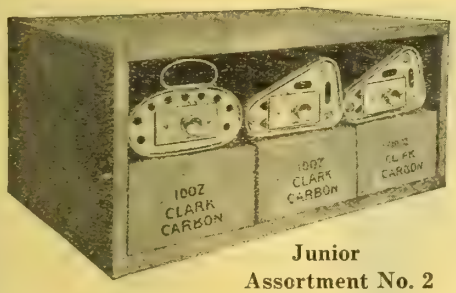
Clark HEATERS



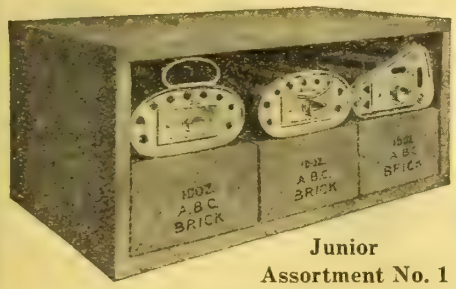
Peerless Assortment



Big Hit Assortment



Junior Assortment No. 2



Junior Assortment No. 1

The Heaters that the Majority of People Prefer to Buy

More *Clark Heaters* are made and sold each year than all other heaters combined. This is sound and sufficient reason why you should "bank" your heater sales on *Clark* products. It positively indicates *greater sales* and *bigger profits* for you.

Clark Heaters are handsome and durable. They fit snugly in at the feet in carriage, wagon, sleigh or automobile. They give a comfortable, easy rest for the feet and the heat chamber is constructed to radiate warmth upward and outward, just where it is needed. **No flame, odor or smoke. Neither is it dangerous or injurious to robes, clothing or anything else.**

Clark Carbon Bricks

A scientifically prepared carbon, densely compressed into bricks and yielding a much higher percentage of heat than any other heater fuel—it is undoubtedly the world's best. One brick in a **Clark Heater** will furnish a strong and steady heat 12 to 16 hours. Yields at least 25 per cent. more heat than any other brick of the same size on the market.

Clark Bricklets

This is a convenient and economical size which does away with the necessity of breaking a large brick when only a moderate heat is required from six to eight hours.

Order now and get in on the big sale that comes with the first of the winter weather. Send for New Clark Heater Assortment. Just right to start sales with. Includes attractive show cards, signs and printed matter with each assortment. See your jobber now.

AUTO ACCESSORY AND SPORTING GOODS SECTION

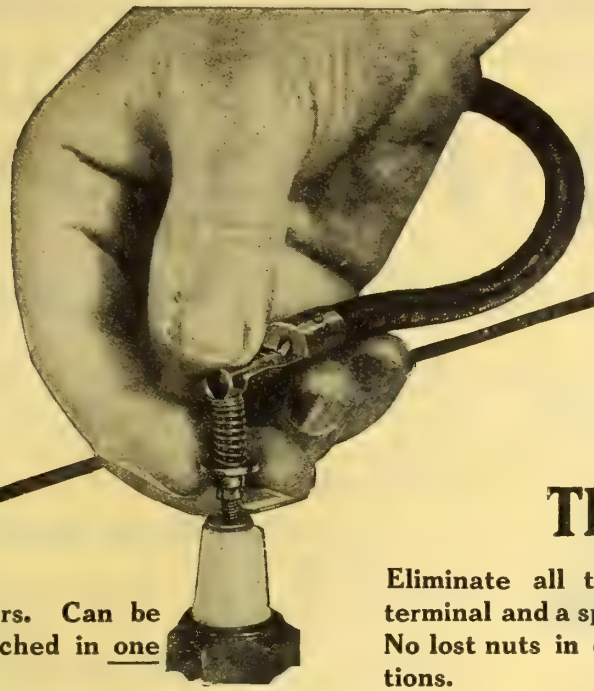
35c. each



No burned fingers. Can be attached or detached in one second.

The HANDY TERMINAL

Eliminate all terminal troubles. A Cable terminal and a spark plug terminal all in one. No lost nuts in drip pan. No loose connections.

Most ignition troubles can be traced directly to loose connections caused by vibration and jar. The Handy can't work loose—the greater the vibration the tighter the jaws of the Handy grip—the better the electrical contact.

The jaws of the Handy are threaded on the inside and engage the threads of the Spark Plug Center bolt. To detach the Handy, simply raise the ring and lift off the terminal. Lifting the ring compresses the spring and releases the jaws. One motion does it. To attach the Handy, lift ring—slip jaws over center bolt nut and release ring. Either operation takes but *one* second's time. No pliers or tools necessary.

There are no loose parts to the Handy—no nuts to burn your fingers or to fish out of the drip pan. The jaws of the Handy grip along the entire length of center bolt.

The method of fastening the magneto cable is unique and insures a permanent connection. First, the ferrule (adjustable to any size cable), is fitted to the cable and tightened with your pliers. Then the stripped wire is threaded through the copper clip which holds it tight when compressed by your pliers. This gives you a firm, non-soldered connection that will not work loose.

The Handy is the last word in convenience and efficiency. Because they can't work loose you get maximum ignition efficiency at the spark plug.

The Handy Terminal is made in three sizes to fit *every* make of spark plug. They are a necessity for pleasure cars, trucks, motorcycles, motor boats, airplanes, etc.

Handy Terminals are sold by reliable dealers everywhere. If your dealers can't supply you—sent prepaid on receipt of price. In writing please give your dealer's name and name of spark plug used. Price 25c each. Use the convenient coupon *now*.

To the Dry Cells Distributors
of Canada

It is a pleasure to announce that this Company recently has been reorganized and a new staff of efficient executives are now directing the manufacturing and marketing of our established brands. New capital - plenty of it - is now at its command, and its facilities are being increased to such an extent that very shortly we will be able to take care of very much increased business.

Up-to-date machinery has been installed, skilled labor has been acquired, and it will be the endeavor of this Company to do business with you on courteous and up-to-the-minute business methods.

A new sales force of exceptional ability will call on you from time to time in the future, in the hope and expectation of doing business in a straightforward manner; a new office organization, bright and alert, aims to promptly answer your letters and give your orders the kind of attention you naturally expect from a well organized institution. In short, we are at your service, and it is SERVICE we expect to render, and we offer you a QUALITY of goods which you have not had heretofore.

We are at your command and believe we will hear from you at any time you need anything in our line.

Yours truly,

CANADIAN CARBON CO., LIMITED

W. W. Dowdell

WWD/R. Manager.

Wanted

SITUATIONS VACANT

WANTED — CLERK FOR SASKATCHEWAN country hardware store, with knowledge of tinsmithing. Apply Box 498, Hardware and Metal, Toronto, stating age, salary, experience.

WANTED — EXPERIENCED HARDWARE clerk for live business in large Saskatchewan town; must be a hustler; permanent position for right man. Apply Box 502, Hardware and Metal, Toronto, or Winnipeg preferred.

GOOD, STEADY POSITION OPEN IN RETAIL hardware for man with 3 or 4 years' experience. State salary. Box 503, Hardware and Metal.

GOOD RELIABLE RETAIL HARDWARE salesman and window trimmer wanted. Good town near Toronto. State salary and experience. Box 504, Hardware and Metal.

POSITION WANTED

TRAVELLER — ENERGETIC, SUCCESSFUL, excellent connection Western Ontario hardware, plumbing and machine trade, seeks kindred lines; highest references. Box 10, Hardware and Metal.

FOR SALE

FOR SALE—HARDWARE BUSINESS IN BEST town in Saskatchewan. Doing sixty thousand business with twenty thousand stock. About ten thousand will handle it; easy terms on balance. This is without a doubt the best buy in Canada to-day. Apply Box 500, Hardware and Metal.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

Getting Results

A large firm in a Western Canada city recently advertised in Hardware and Metal Want Ad. Page for a man to fill a responsible position—result 21 replies. This indicates that the want ad. page is followed closely. The man YOU want to reach is reading this page.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

Toncan Metal News

PUBLISHED IN THE INTEREST OF BETTER SHEET METAL

33,000 POUNDS OF TONCAN METAL USED ON WORLD'S FINEST TELESCOPE NEAR VICTORIA, B.C.

All The Windows, Shutters and Doors—Also Dome and Walls, Inside and Outside—Covered With This Durable Material

The giant 72-inch reflecting telescope, the finest observation station in the world, located at the summit of little Saanich Mountain, near Victoria, B.C., is now in full operation.

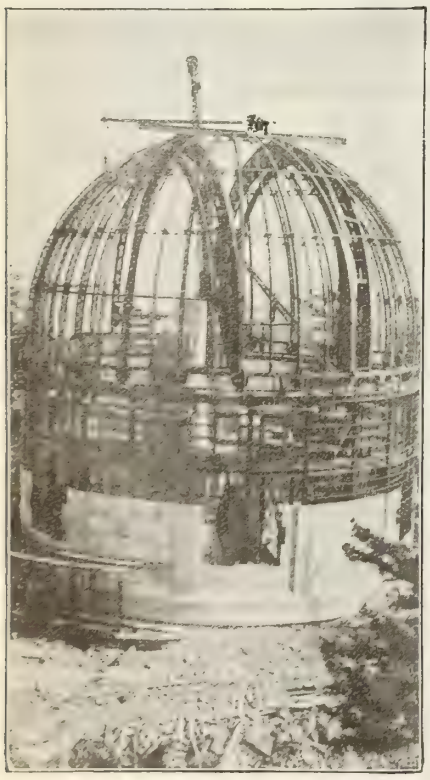
It ranks in size as the world's largest telescope, weighing fifty-five tons and resting on massive piers of reinforced concrete. The tube is thirty-one feet long and weighs twelve tons.

Of unusual interest from an engineering point of view is the great dome, covered with Galvanized Toncan Metal, which is sixty-five feet in diameter and weighs 120 tons. The dome revolves with ease. The 15-foot wide shutter opening can be adjusted to take in any portion of the heavens. Each shutter weighs five tons and runs lightly and noiselessly.

As a protection against deterioration, the windows, shutters and doors—also the dome and walls, inside and outside—were covered with rust and corrosion-resisting Galvanized Toncan Metal.

This telescope, which is to be used more for research work than for observations in connection with the relations between the sun and the stars, is expected to be of scientific, literary and educational value.

Dr. J. S. Plaskett, Chief Astronomer of the Dominion of Canada, well known to the scientific world, will have full charge of the observatory.



REDUCES BASIS OF INSURANCE RATES 70c.

Sheet Metal Roofing Favored By Insurance Company

The Mutual Fire Prevention Bureau, Oxford, Mich., allows a 70 cent reduction in the basis rate of insurance on buildings roofed with sheet metal, instead of ordinary shingle roofing, because with the sheet it is possible to come down over the eaves, under the cornice and connect with the metal siding, making both a fire resisting and lightning proof covering.

This Company states that, for this reason, every elevator and mill in the country, even if only built this year, could afford to tear off its shingle roof and replace it with sheet metal roofing and siding, thereby reducing the insurance rates enough to pay for the entire charge in one year, on the average sized building.

A roof will last much longer and be far more economical by using Toncan Metal Sheets, which are exceptionally durable and corrosion resisting.

Don't Say "Sheet Metal" Say "TONCAN METAL"

TONCAN METAL

Resists Corrosion

TONCAN Metal is as nearly 100% pure as it is possible to make commercial sheet metal from iron ore. Moreover it is homogeneous and made by slow, scientific processes; hence its extreme durability.

Years of service, under the most adverse conditions, have proven the durability and corrosion-resisting properties of Toncan Metal.

Roofing, Siding, Eaves Trough, Conductor Pipe, Window Frames, Ventilators, Lath, Tanks, Culverts, and many other products, are made from Toncan Metal Sheets.

"To Sell Files You Must Know Them"

We were impressed when reading this sentence recently.

The truth of it explains why some hardwaremen hold their tool trade against all comers.

They know the good qualities of every tool they handle.

To them "Famous Five" Files bristle with good points (figuratively as well as literally). They will tell you of their fine balance; of the hardness of the steel and the accuracy and sharpness of their teeth. The advice of these men is absolutely sound in regard to the best file to use for a job.

We are proud of the fact that all such hardwaremen sell "Famous Five" Files. They know them and specify them when ordering.

CUT YOUR CUTTING COST WITH VICTOR Flexibles

The high cost of tools should emphasize more than ever the importance of quality.

The high cost of hack-saw blades ought to drive every hand blade user over to the saw that does not break in ordinary hand work.

VICTOR FLEXIBLE HACK SAW BLADES have exactly the same cutting power as the finest All-Hard on the market, and that they cannot be broken in use except by intentional abuse is an undisputable fact—which will represent a saving from twenty-five percent to thirty-three and one-third percent in breakage alone.

Seventy-five percent of the All-Hard blades used in hand frames break before they are worn out. Watch the All-Hard blades in your own shop and see the enormous amount of breakage—then use VICTOR FLEXIBLES and note the economy.

VICTOR SAW WORKS LTD - HAMILTON, CANADA

If interested, tear out this page and keep with letters to be answered.

The Jaws Can't Spring Out

A trap turns traitor when the jaws spring out—letting valuable fur go instead of *holding it*. Just another reason why trappers everywhere use VICTORS—because the jaws *stay put.*

Victor Jaws cannot jump out. On the smaller sizes a lug holds the jaws firmly where they should be. On the larger sizes a clever bend in the end of the jaw does the work. Patented, of course,—and used exclusively on traps made at Trapping Headquarters.

ONEIDA COMMUNITY, Limited

Starrett Hack Saws are Unexcelled Just as Starrett Tools are Unexcelled

Mechanics come to your store to buy Starrett Tools because they know there are none finer, none more accurate, none more dependable. It's the same with

Starrett Hack Saws

Whether your customer wants these saws in large quantities for a big shop or in smaller numbers for occasional use, you can show him that he buys more than a good hack saw; he buys the right hack saw, the one best fitted for the job.

The right hack saw cuts quicker, thereby saving valuable time. It lasts longer—doesn't dull as quickly, doesn't break as easily—thereby saving money because fewer are required.

Our catalog No. 21MA describes the hack saw that is unexcelled and tells both you and your customer how to pick the number of saw that will do the best work on any given job.

MACLEAN'S

for DECEMBER

∴ ∵ MACLEAN'S MAGAZINE GETS BETTER ALL THE TIME ∴ ∵

Snipers and Sniping—*by a Sniper*

A SNIPER is back in Canada—a star sniper, who has 34 marks on his rifle, every mark meaning a German life. Most of us know absolutely nothing of the work of the sniper, but the story—a remarkable one—is told in the Christmas (December) MACLEAN'S by the champion sniper of the Canadian Expeditionary Forces. This man was buried by a shell-explosion, was dug out by two comrades, and has lived to tell his wonderful story, in MACLEAN'S. It's worth 15c to get this story alone.

"Politics From Within"

—Leacock, of Course

TRUST Leacock to see a chance for his witty and humorous pen. He deals with the humorous phases of electioneering in Canada in his usual vein.

Why Laurier sent Troops to South Africa

THIS contribution, by Col. John Bayne Maclean, goes backward many years—to the time of the South African War in 1899-1900. That was when Canada first took up arms for the Empire. Politics, of a high order, was back of the decision to send Canadian troops to the Antipodes. It is "inside" history.

Oppenheim—Allenson—McBeth—Mumford

A LONG instalment of Oppenheim's absorbing story, The Pawns Count, is given in the December MACLEAN'S. A short story, by A. C. Allenson is seasonable. Madge Macbeth contributes a complete novelette, The Man Who Wasn't. And Ethel Watts Mumford, teller of delightful tales, delicately told, gives us the first of a series of short stories—Love and the Locksmith.

The Usual Popular Departments

THE Business Outlook. The Nation's Business, Women and Their Work, and the Review of Reviews—all are present in strong way in the December MACLEAN'S.

At All News-Stands 15c.

Gadsby's Story of the Union Government

GADSBY is saturated with Ottawa knowledge—much of it of the inside variety. He pokes about, talks with big men; and big men, and lesser ones, talk with Gadsby. Useful sort of man, is Gadsby. What he hears and learns he writes about for MACLEAN'S; and in this story of his about the new Union Government, he reveals the undercurrents on the movement that developed into negotiations, and which finally resulted in a Union Government. Gadsby adds interesting biographical information to his brilliant study.

Robt. W. Service is back again

BACK in MACLEAN'S, that is—in body, he is still in Flanders—where the fighting grows uglier all the time. Service has taken time to write verse for MACLEAN'S. You know well the virility of his style, and the gripping, human character of his verse. It is about life and men in the trenches he writes—about our boys far from us. It is worth something to see our boys as Service sees them. Read "The Shape at the Wheel" in the December MACLEAN'S.

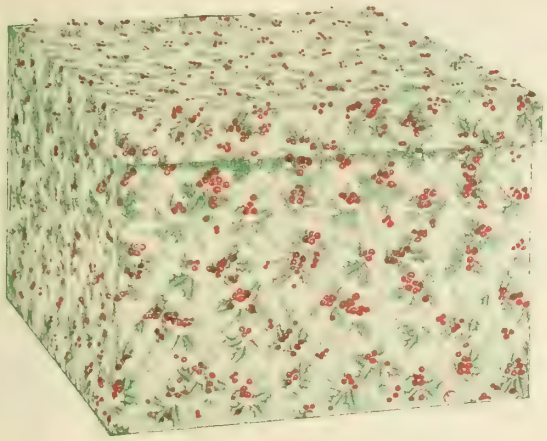
Arthur Stringer writes a Beautiful Christmas Poem

STRINGER is a wonderful man—wonderfully versatile, wonderfully human. He is a master of the short-story and of the detective and mystery type of story; and he can climb the heights of literary endeavor, as he has in this passing sweet poem—Christmas Bells in War-time. Your heart is tender these times of horrible slaughter and of heroic achievement, and you'll be grateful to Stringer for putting beautifully your innermost thoughts and feelings.

Another Big Business Bringer!

McClary's "Model" Teakettles

In Handsome Gift Boxes



Will Increase Christmas Sales

This year, more than ever before, the tendency of Christmas shoppers will be towards gifts of permanent worth—of practical everyday usefulness.

For this reason scores of your customers will buy McClary's "Model" Teakettles, if they're properly displayed — get one of our attractive window display cards.

Christmas Trade wants something showy. Therefore without any additional expense to you we have packed our "Model" Teakettles in handsome boxes, beautifully decorated in holly design.

Get a supply of these "Model" Teakettles at once. They make a sensible gift that every housewife will be glad to get and use.

Two sizes—No. 750, 8½ inches or No. 900, 10¼ inches in diameter. Made of heavy nickel-plated copper with flat bottoms to fit any stove. Rigid handle to prevent unexpected tipping. Cover is placed on the side so hand will not come in contact with escaping steam, and is strongly hinged—always in place. This is the original type of side-filling kettle and it has the ample capacity, strength and lightness to insure good work.

NOTE: *Our new prices make big business possible. If you haven't received our price list write us at once — don't wait until the rush begins.*

Ideas that sold the goods

No. 8 of a Series of Prize Stories by Men Behind the Counter

Ask a customer if there is anything else that you can do for him, and it's ten to one, he says "No!" Suggest to him something he really needs and the chances are always that he will buy. That's the power of Suggestive Salesmanship. Its effectiveness is conclusively borne out by the story of Mr. John M. Swalm of the Swalm Co., Pottsville, Pa., which follows:

I was behind the counter Saturday night as usual. We were rushed and there was someone always waiting, so we had to work at top speed. And some of those customers certainly did waste time for us figuring whether "John" told them to get 10 lbs. of 5 d or 5 lbs. of 10 d nails, or wanting us to explain that black shells were not loaded with black powder but with smokeless powder. But we were getting away with it all right and selling a good many Evereadys and Tungsten Batteries besides.

I had just finished telling a lady customer why it was impossible to supply a battery of 8-hour capacity for a light small enough to carry in her pocketbook. She finally bought a No. 6991. While I was talking I noticed a small elderly man looking on and listening as though he were interested, so I asked him if I couldn't show him an Eveready, too. He replied that he was looking for a rule, a 2-foot rule, and that would be all he would be wanting.

I showed him the rules. He was not satisfied with our price, for he said he could get one cheaper that would fill his needs just as well. So I said to him, "If we cannot sell you a rule, don't you need one of these Evereadys that come in so handy on these dark winter mornings?"

He showed a little interest by asking how much they were worth. I mentioned the lower prices. He said he only wanted a 2-foot rule anyway, and he would get that without paying two prices for it.

We don't waste time Saturday nights figuring out why we don't land some customers. We reserve these matters for discussion at our semi-weekly meetings. So I kept on working. One man bought a mop and then I sold him an Eveready No. 6962, so he could tell at night what the gasoline gauge of his automobile registered.

While I was putting a No. 791 battery in another make of case and telling the customer why he had better stick to Eveready Tungsten, I noticed that the small elderly gentleman had come back.

There he was across the store and one of the other boys was showing him the rules again. Either he hadn't found a cheaper rule or he had passed it up as no good. It pleased me to know that I had treated him well enough to have him return. I saw him purchase one of the rules and then start for my part of the store on his way to the street. I had just finished with a customer, so I called to him, saying, "Here is one of those Evereadys I think you would like."

"I am not looking to buy one of those things," he said. I knew right then it was up to me, so I told him how useful an Eveready is. I showed him how to take a battery out and how to replace it, and how the contact with the bulb was made; then I told him how long the battery would last and how much it would cost for a new one.

"That would be fine for looking at the clock in the morning before daylight," he said. That gave me an opening and I went right to it. "It certainly is better to stay there under the feathers, comfortable as a South Sea Islander," said I, "and flash your Eveready at the alarm clock a great deal better than to rise shivering, light a match and discover you're an hour or so ahead of schedule."

"How many batteries would it use in a year for that service?" he inquired.

"Not more than four batteries," said I, "and possibly only three, if that is all you are going to use it for, but I believe you will find it one of the most useful articles in the house. It is going to prove useful in countless other ways."

He said he would take the style that I suggested. I wrapped it up and gave him his change and thanked him. I felt that I had done something, for I'll wager that that old fellow comes back for every refill and every bulb, and for another light small enough to put in the Misses' pocketbook. What do you think?

A Christmas Gift Suggestion Worth While---

The Old Dash Churn

"Oh dear! This is hard work."

"I'm not One Bit tired, Grandma."

The New Dash Churn

After all the Dash Churn is Best—

but there is a difference in dash churns. There's the old-fashioned kind that grandmother used which meant real work to operate; the floor for feet around covered with splashes of cream, to say nothing of the bespattered condition of the operator. Even at that this churn still does better work than any other type.

We have an improvement on the old dash churn in the

RELIABLE CHURN

in fact it starts in where the old type leaves off, improving it in every detail. It is operated either by hand or power (the same machine with change of one wheel). Can't possibly splash, even when filled to one gallon of capacity. Churns quickly, is sanitary; no chance for an accident by leaving plug out or top unlatched.

The "Reliable" is simple in construction, the churn being a white stone jar made in four sizes: 3, 4, 5 or 6 gallons; the machine part is made in one size only with the crank and dash adjustable to churn from ½ gallon to nearly capacity. A child can operate it easily.

ABSOLUTELY GUARANTEED FOR 5 YEARS.

The "Reliable" churn is advertised in leading farm journals and daily papers throughout the country—the demand is there. Will you cash in on it?

Now is the time to take action—write to-day.

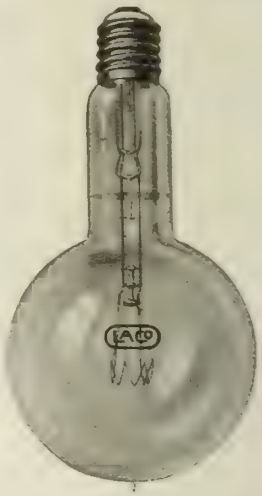
Do you realize the relation between your stock and profits? Every line that you stock for which there is an existing demand and which repeats quickly means a rapid, profitable turnover to you.

LACO NITRO LAMP "THE LIGHT THAT GIVES MORE LIGHT"

Is a product that you can profitably stock, display and sell. There is a constant demand for lights and there is a rapidly increasing demand for the Laco Nitro Lamp.

The reasons why this lamp is in such demand are:

It gives a clear, bright, white light most closely approximating daylight. It gives greater comfort, less eye strain. It insures increased production. Makes more accurate workmanship possible. Reduces accidents and spoilage.



The Laco Nitro Lamp has a tungsten filament in a nitrogen gas-filled bulb.

It is the greatest development of electric light bulbs and because of its superior construction and the materials used it gives more light per watt than any other type of lamp, hence it's economical.

Write your jobber or to us for prices, trade discounts, etc.

Vol. 29 TORONTO, NOVEMBER 24, 1917 No. 48

Planning for the Christmas Trade

Useful and Ornamental Gifts—Toys for the Children — Sporting Goods Prominent—Wide Range in Cutlery — For the Mechanic, Tools — Labor Savers in Electrical Goods—Auto Accessories Not Backward—Paint and House Furnishing Necessary — The Store Itself, the Windows.

FOUR weeks remain in which to make a strong bid for Christmas business, and it is, therefore, none too soon for hardware merchants to perfect their plans for a real hard drive to secure their proper share of the Christmas shoppers' trade. And, apart from any other consideration, isn't the utility of the Christmas present as available in the hardware store a feature which should be played upon strongly, especially in these days of stress when the novelties should play such a little part?

Useful and Ornamental Gifts

In recent years the trend has been more towards the useful than the ornamental, and herein has the prominent part possible to the hardwareman become evident in the scheme of Christmas giving. It is not implied by any means that a useful present can not be ornamental and welcomed by the recipient—the two can be and are combined—but there are many ornamental and useless things which should be and are gradually losing favor. The hardwareman, selling from his varied stock, presents to the Christmas shopper a wide range of presents, suitable to every member of the family from the standpoint of pleasure and usefulness. This fact should not be lost sight of, and it is the more evident as a review of the stock in the hardware store is made.

Toys for the Children

It might be said that the appeal primarily can be made to the children, and this is where a toy department in a hardware store would find immediate favor. The point might be brought out that toys are useless and not in line with the point emphasized above, but—are they really useless? It is not so long ago, perhaps, that the majority of toys were in this category, but the toy manufacturers have come to the front with real educational toys, which give pleasure, and also develop the youthful mind along suitable channels.

Sporting Goods Prominent

There are many items carried in the sporting goods department, too, which have a direct bearing on the trade for the youngsters. There isn't a child but who has had his mind set on a wagon, velocipede, sleigh, an automobile, or a pair of skates and a hockey stick. These items are each useful in more ways than one, and as a means of developing self-reliance and independence in the youthful mind no better selection could be made.

The sale of skates and hockey sticks is not restricted to the children either—the young men and women as well as the older people enjoy the pleasures of skating, and to these might be added the enjoyment found in the use of snow shoes, skis and toboggans.

Winter lines undoubtedly have the preference at this season of the year, but it is well known that many sales are effected for tennis supplies, baseball goods, golf sticks, footballs, etc. The games represented in these supplies may be favorites with certain ones for whom the gift is being selected, so a display would not be out of place.

Wide Range in Cutlery

One of the most important departments during the Christmas rush is that represented by the cutlery. Here will be found the many designs in silver-plated flatware, which so delight the women of the household. The tendency to-day is towards the selection of a certain design, to which pieces can be added to make the set complete. It is not enough to carry only knives, forks and spoons, which are in daily use—the addition of butter spreaders, tomato servers, cold meat forks, etc., forms an important adjunct to these staples in addition to their value as individual gift items.

Cut glass and silver-plated ware, such as butter dishes, bread trays, etc., are now being carried in the hardware store with marked success. These lines prove very popular and add greatly to the display effect of a cutlery department.

For the man of the house, razors and shaving utensils of all kinds are always welcome. There are those who prefer the straight blade razor, and for these

it is possible to suggest also a good strop and hone. The safety razor has long since passed the novelty stage, and is a standardized item in any shaving accessory stock. Brushes, shaving soap and talcum powder are all splendid sellers, and to those possessing safety razors an extra dozen blades will come in useful.

Pocket cutlery and scissors are by no means to be overlooked. Pocket knives range in price from the cheap ten-cent ones for the kiddies to the three and four dollar pearl handled favorites among the men and women. Scissors have almost as wide a range individually, and are also sold in attractive cases, which make splendid gifts.

Valuable to the retailer is the watch and clock business, and there are merchants whose success with fountain pens speaks well for this new hardware line. The boy will be as pleased with a dollar and thirty-five cent watch as with a gold one—the housewife likes nothing better than a reliable clock in her kitchen to plan her day's work by; the fountain pen finds favor with all members of the family.

For the Mechanic—Tools

That the mechanic will welcome a new addition to his collection of tools is no more than true. Love of his trade makes his appreciation of a plane, level, micrometer, saw, hammer, trowel or drill as a Christmas present doubly enjoyable. The tool department in its regular stock offers splendid opportunities for gift suggestions, and in the giving of tool chests to the younger element a very useful and splendid thing may be accomplished, which point should be brought out to the parents or others who might be interested.

Labor Savers in Electrical Goods

In the electrical department the hardwareman has to-day a wide range of eminently useful articles, which he can feature in a very aggressive manner. "Doing it electrically" is becoming very popular with the housewife of to-day, and to her as well as to the man of the house the sale of these utilities can be effected readily. The electric percolator, grill, iron, stove, washing machine and vacuum sweeper have a place in the scheme of good housekeeping. There is no man who wishes to see his wife over the scrubbing board or breaking her back sweeping when the labor thus entailed can be eliminated largely through these new and successful appliances.

Table lamps, heating pads and heaters are other items for which the sale is increasing. These as well as the electric flashlights are established beyond the stage of novelty. Their use is genuine and their sale only a matter of bringing them to the attention of the Xmas shopper attractively.

Probably more this year than any past will the auto accessory department play a part in the plans of the Xmas gift-seeker. The growing use of motor cars during the winter means the continued sale of gloves, gauntlets, lap robes, and foot-warmers. These are essential to comfort in the operation of the motor during the period of cold weather, and their obvious usefulness will be a big factor in their sale. Probably the motorist, too, would like that special tire pump, lifting jack, vacuum bottle or pair of eyeshields he has been thinking of getting. Sell them to the Xmas shopper—the suggestion will be welcomed—the recipient will be made happy.

Paint and Housefurnishing Necessary

It should hardly be considered an impossible thing to sell paint at this season of the year, for a bright, attractive interior does much to encourage the Xmas spirit. There cannot be a bright, cheerful spirit exhibited in surroundings which are sordid; every effort should be made to make the home reflect the spirit of the season, and there is no greater influence than the liberal use of paint.

To the thrifty housewife, presents coming from the housefurnishings department carry a message which meets with a direct response. There is no woman who, priding herself on her culinary achievements, will be disappointed in the receipt of a nice gift of enamel, aluminum, copper or nickel-plated ware. There are also kitchen cabinets, stoves, washing machines and wringers which meet with approval by the recipient.

In enamel and aluminum ware there are too many cooking utensils to enumerate individually, but the attractive arrangement of these goods on shelving, display tables, and perhaps an occasional window, will mean a steady growth in point of sales. At this season of the year the better grades of cooking appliances find a ready sale when their good points are brought to the attention of the shoppers.

No kitchen equipment is complete without a stove, and the selection of this important item is often left until this season of the year, when its purchase can be considered in the light of a Xmas gift. Whether it is a coal or wood range, a coal oil, gas or electric stove, the outlay is always carefully guarded until the purchaser is satisfied that there's value in the considered purchase. It would appear that the sale of stoves can be developed successfully during the Xmas season.

There are many really beautiful things being turned out in copper and nickel-plated ware. Tea kettles, tea and coffee pots, chafing dishes, hot water kettles, etc., make splendid suggestions which can be offered to the Christmas shopper with good success. Serving trays are also greatly in demand, and with the other items enumerated may be attractively set up in silent salesmen or counter display to secure attention.

Other adjuncts to the hardware merchant's stock which call for attention during the holiday season are those represented by leather goods, trunks and bags, beds, springs and mattresses. It is only necessary to mention these for the dealer to realize the possibilities in their sale to those seeking to purchase useful gifts.

There is no doubt but that the lines carried in the hardware store lend themselves particularly well to the needs of the Christmas shopper from the standpoint of beauty, utility, and variety. Every member of the family can find a gift suitable for every other member. There is a suitable article in the list enumerated above to satisfy the most exacting, and to the hardwareman who makes the most of his remaining time will come the sales of those goods which spell profit with every ring of the cash register.

The Store Itself—The Windows

About the store itself much might be said, but it should be only necessary to mention a few details in connection with the sales campaign now being promoted to bring a realization of the action necessary in securing the big share of Xmas trade. First it should be remembered that this is a Xmas campaign that is being inaugurated—the store should be decorated—there should be created an atmosphere of holiday cheer. Holly, bells, lots of color should predominate. Every department should shine—no dust should be allowed to accumulate—attractive show cards should be printed. Each line of merchandise should be arranged as though it predominated, that is, the arrangement should be made novel, appealing, worthy of the message you are trying to convey from each article of stock in your store.

The window displays deserve an exceptional amount of care in the Xmas appeal. The power of suggestion as outlined by the window will create more sales at the present season of the year than at almost any other time. There are any number whose minds are influenced entirely by the appeal made from the store window. The message which it conveys should be convincing—this point should be carefully considered from all angles and plans based on this platform followed.

"HOW TO MEASURE THE VALUE OF TURNOVER"

(Third Address by Frank Stockdale.)

EDITOR'S NOTE—*Frank Stockdale gets* $60 *a night. He is a famous authority on retailers' problems—management, costs of doing business, profits, how to meet competition, organization, advertising and so on. He is so good that the Advertising Clubs of the World have procured him as their Advisory Counsellor for the Retailers' Section; and they farm him out to clubs all over America at the comfortable fee of* $60 *per night. So great is the demand for Stockdale that clubs must make application for him many months in advance.*

The Toronto Advertising Club had him in Toronto for four nights—October 30 *and* 31, *November* 1 *and* 2. *Tickets for the four lectures cost* $5.00.

We attended the Stockdale Lectures, and in HARDWARE AND METAL *the four lectures are quite fully reported. The good things this master of retailing said are all in our reports. This is the third lecture in the series, two having appeared in previous issues. The fourth will appear in next week's issue.*

THE third address by Mr. Frank Stockdale, on retail merchandising problems dealt with the subject "How to Measure the Value of Turnover." The importance of the merchant having a detailed knowledge of profits was emphasized in connection with turnover, which was defined as distinct from volume. An illustration of the method of figuring turnover was given, emphasizing the importance of basing all percentages on the sale.

"The merchandising game is based on the figuring of profits," said Mr. Stockdale, "that is its foundation and whether you are an advertising man, salesman, buyer, department manager, decorator, bookkeeper, or whatever part of the merchandising plan you fit into, the effect and value and result of your effort depends upon a knowledge of profits, and when we look over the wide merchandising field and see the large number who have not yet got a firm grip upon the matter of profits we must certainly be convinced that it is no easy job. We are pioneering and there is a great opportunity for knowledge along this line."

"As we go into our merchandising establishments and study the subject, we realize that a great deal depends upon how a man does a thing. Profit is the thing that determines how you are going to merchandise. The thing to consider is 'Am I getting under my load or is my load dragging me down?'

"Another thing to consider in regard to profits is to adopt methods instead of principles, and the thing we want to watch in studying merchandising problems is that we don't throw the principle away.

"The principle of handling percentages and the principle of *applying specific facts to specific things instead of applying general facts to specific things* are the ones to study. Every last percentage should be based on the same thing because we want percentages for the sake of comparison.

"All percentages should be based on the sales, and the average man who tries to get percentages of expense on the cost of goods sold gets tangled up. It takes a firm big enough to keep an expert accountant on the job to keep things straight."

To illustrate the point Mr. Stockdale drew a large circle which represented the sale and marked out percentages for margin, cost of merchandise and net profit. On this basis Mr. Stockdale stated that any percentage quoted would be a percentage of the circle and there was no likelihood of becoming tangled up because it would be based on the sale.

"The two highest retail authorities in the United States and hundreds of merchants recognize this method," added Mr. Stockdale.

"Nine out of ten merchants with whom I have come in contact, who mix their percentages, never have percentages that tell them very much. If percentage is 'a sign of relationship' you must keep the relationship based on some one thing. When you change your base of percentage you have changed the whole thing and you are going to get tangled up somewhere."

At this point Mr. Stockdale emphasized that turnover was distinct from volume. "Volume answers the question, 'How much do I sell?' Turnover does not answer that question at all as I am using the term. Turnover answers the question, 'How long does merchandise stay in my store?' That is a fundamental point to be kept in mind."

Mr. Stockdale proceeded to illustrate the method of figuring turnover on the basis of securing the facts and figuring it out from them. A problem was worked out, taking an inventoried stock on Feb. 1 as worth $2,000. Sales for the year preceding were $6,000. The margin was taken as 33 1-3 per cent., which made the cost of merchandising equal to 66 2-3 per cent. of selling price which in turn is equal to $2,000, that is, the goods are worth at selling price, $3,000. Dividing the worth of stock at the selling price into the selling value it was evident that the stock turned twice during the year.

Referring to this method of working the problem Mr. Stockdale pointed out that it was necessary to know at certain periods of the year how much stock was on hand in order to strike an average which is required in working the problem of the number of turns. On this basis the above method of working the problem is incorrect owing to the fact that the average for the previous year was worked into the figures for this year. Mr. Stockdale emphasized that the closer the average figures ran per month or week of the present year the more accurate would be the result indicating the number of turns of stock per year.

"The usual method is to estimate as closely as possible what the stock is at the end of each month

during the year. These figures added and divided by twelve give the average stock carried through the year. If the merchant has $2,000 at inventory time the chances are he has from $2,500 to $3,000 worth throughout the year," said Mr. Stockdale.

"The average merchant gets only half as many turns as he thinks he gets."

Referring back to the correct method of doing the foregoing problem Mr. Stockdale indicated that the sales at cost were $2,000 while the average stock carried was probably about $3,000, which works out to 1 1/3 turns of stock per year.

TO DISCOVER TURNOVER

A rule was given for figuring turnover, as follows: *"Divide the year's sales at cost by the average stock carried."*

"In measuring the value of turnover we want to realize that turnover affects only one kind of expense directly. The two kinds of expense are (1) *Time or carrying expense and* (2) *Labor or selling expense.* The total expenses of the store are divided into time and labor expenses. Time expense is expense that is directly affected depending upon the length of time the merchandise stays. Labor expense is expense that goes up and down, depending upon the amount of labor necessary to sell the merchandise. We carry merchandise and we sell merchandise, the operations are separate and should be made distinct."

Proceeding to outline some of the expenses in a store in their proper category as expenses, Mr. Stockdale referred the audience to the following list. Under the heading of Labor or Selling Expenses he included: Clerks' salary, owner's salary, advertising, delivery, bad debts and part of general expenses. Under the heading of Time or Carrying Expenses he included: Rent, insurance, taxes, heat and light, interest on investment, depreciation and part of general expenses.

"It is obvious that these expenses go up and down depending upon how long the merchandise stays," said Mr. Stockdale. "Some lines turn much faster than others and so this difference in turnover exists in every store."

Applying the expense percentages outlined above to an actual case, Mr. Stockdale illustrated a store in which the expense of doing business was $1,460 and the yearly sales were $6,000. This was on the basis of two turns per year. On the basis of $6,000 total sales he worked out the following expenses, on the basis of average percentages found to exist in business:—

Clerk's salary	$ 366
Advertising	156
Owner's salary	180
Rent (at 3 per cent.)	360
Heat and light	60
Insurance and taxes	144
Delivery	36
Bad debts	24
Interest	360
General expenses	162
Depreciation on stock and fixtures	198
	$2,046

Illustrating the difference in these expenses where less stock was carried and yearly sales were the same, Mr. Stockdale continued as follows:—

RELATION OF EXPENSE TO TURNOVER

"Suppose I put in as much stock in this department as will last a year and I get one turn. The average stock carried is the average sales for the year. Instead I carry only half as much and get the same sales, therefore I am using only half as much space. Expenses of lighting, rent, insurance and taxes are only half the above figures and in the latter two cases only their share of expense is borne."

Following out the method defined of securing the cost of doing business, Mr. Stockdale divided the $2,046 expenses by the $6,000 total sales which indicated 34 1/10 per cent. "It is evident the goods in that store have to bear a high profit," said Mr. Stockdale.

"If I carry as much stock on an average as I sell in the year, my interest is 6 per cent., therefore my interest charge in expenses would be 6 per cent. In regard to general expenses, if I turn over my stock twice a year in one case and only once in the second case, that stock must bear its proportion of telephone, etc., expenses for a year where it only turned once and for six months where it turned twice. The same thing applies to sweeping and taking care of the store, therefore we will have to double some general expenses."

Mr. Stockdale defined general expenses as "the place where all expenses are put that the merchant does not know what else to do with."

Referring to the matter of rent, Mr. Stockdale pointed out that if the rent was $360 on the space where $6,000 worth of merchandise was sold which turned once a year, the rent on some other department selling an equal amount of merchandise which turned a different number of times would be on the same basis. Thus if the stock turned eight times the yearly rent would be $45 on the basis aforementioned.

Making a comparison of the cost of doing business as between specialty stores, Mr. Stockdale stated that in the jewelry store stock turned on an average of about once a year and that the expense of doing business was in the neighborhood of 34 per cent. Compared with this he cited the case of the grocery store which turned its stock eight or ten times and had an "expense of doing business" of about 18 per cent.

"If you take the store facts as we have worked them out," said Mr. Stockdale, "you will find fact after fact that will prove that what we have done is sound to the core. There is only one reason why it costs more to sell goods in the jewelry store than in the grocery store and that is the dull seasons with their large selling expenses. Turnover is not the whole thing in business, but it affects all these time and carrying expenses."

"I was in a dry goods store where about two-thirds of the merchandise sold was sold during the months of October and November, but they could not turn off their help during the other seasons. That is a similar condition to the one found in the jewelry store. At holiday time the jewelry store is at the high peak and that means extra selling expense. The whole matter is a question of the 'peaks in business.' People eat every day, hence the continuous turnover in the grocery store."

PUSHING THE LINES THAT SHOW PROFIT

Addressing the heads of departments in particular, Mr. Stockdale continued *"it means to you that when you have a line in your store that is bearing a*

real profit, that is the line for you to push, that is the line to buy and that is the place to put the effort that counts. You want to co-operate with merchandise men in holding these stocks down to where they ought to be and the chances are that in doing that thing you are doing more for that store than if you would sell half the merchandise sold in the store, in your department. *Stocks have to be held down until there is a profit.*

TURNOVER MAY MEAN LIFE OR DEATH OF STORE

"We find stores turning stock seven times a year in competition with stores turning three times a year in the same line, and the three time stores are having to draw each year on the fund they have laid away in years gone by. As far as managers and buyers of departments are concerned there is a great opportunity to make money by holding stocks down. *I know you have to have variety to make sales, but you can get so much variety that no matter how many sales you make you don't make any profit.*"

Addressing the retail merchants in particular, Mr. Stockdale continued, "A man comes along selling merchandise which you have to sell for a certain margin of profit. Perhaps it does not average up to what your marginal profit is. *You say you would lose money every time you sell it, but the chances are if that article has been on the market for any length of time and merchants are distributing it widely, the ease of selling will bring down the cost of doing business so that you would have a profit.* I am not advising you to take everything that comes along. You want to judge between men that bring along the right proposition and the wrong proposition. Judge not only between advertised and unadvertised lines, but judge between advertised lines and other advertised lines because there are advertised lines and advertised lines. You see a man getting along fast every once in a while, and the reason very probably is that *that man is keen enough to know what to push and what to sell, and he is keen enough to let the other fellow take the big sales on certain lines while he takes the sales on the lines that show the real profit.* I feel very keenly the fact that one merchant can out-general the other because he lets one fellow sell the goods that make the profit. When real profit gets down to 3 per cent. it does not take much to make a difference between a merchant and storekeeper."

During the discussion which followed, the question was asked as to what depreciation consisted of. Mr. Stockdale in answering divided depreciation into two general divisions, depreciation on fixtures and stock. Referring to the dry goods trade he pointed out that loss through soiled edges of cloth, ends, etc., was depreciation and not markdown.

Answering another query Mr. Stockdale stated that the U.S. authorities quoted in regard to the matter of "basing all percentages on the sale," were Paul H. Nystrom of the U. S. Rubber Company, recognized as one of the leading retail investigators, and W. Salmons of the staff of *System.*

* * *

Answering a question in regard to the providing for a definite percentage of markdown when it was a condition of the future, Mr. Stockdale replied that the only way of judging the future was to judge the past. "Everything is uncertain when you project into the future," said he.

* * *

"Sometimes you receive goods in much more favorable condition than at other times. You might not have markdowns this year the same as last," was the statement of one merchant in the audience.

To this Mr. Stockdale replied that merchants would have to take into consideration past experiences in regard to markdown.

* * *

"Should markdown be classed as part of expense?" was next asked.

Mr. Stockdale replied that this was immaterial for the reason that markdown applies only to a limited number of articles in most stores.

* * *

"Don't markdowns affect the percentage of gross profit?" was asked.

"They do," said Mr. Stockdale, adding that where merchants have found it necessary to mark down goods by a certain percentage, that same percentage should be added before computing the net profit.

"If you don't take into account your percentage of markdown you are going to get left," added Mr. Stockdale.

* * *

Another query from the audience was as to whether the warning to "keep stock down" applied to present or normal conditions. Mr. Stockdale replied that it applied to normal conditions and also to abnormal conditions when the market is found to be going down.

* * *

"Why don't markdowns come under depreciation?" was asked.

"The only reason for keeping them separate is so as not to lose sight of them in the shuffle," replied Mr. Stockdale.

Referring to the grocery business in this connection he pointed out that if there was any particular waste in the store it should be put in a separate account in order to distinguish things. At this point a grocery merchant injected a little humor into the situation by asking why the merchant should keep groceries until they were classed as waste.

Dealing further with the subject of markdowns and depreciation and their relation, Mr. Stockdale pointed out that if there was no considerable amount of markdown it might be classed as depreciation, but if a large amount it should be kept separate so that it would always be before the merchant. He added that there was practically no depreciation on stock which turned over eight times a year.

* * *

"Does the rule applying to turnover apply to long-time sales?" was asked.

"Be careful when you talk of turnover to distinguish between capital and stock turnover," said Mr. Stockdale, adding, "a man's capital turnover is undoubtedly slowed down by long-time sales."

* * *

"Are there any recognized margins of profit in the U. S. Courts?"

"No," was the answer.

(Continued on page 55.)

Cutlery Situation Looks More Serious

Importers Have Received no Shipments From Great Britain Since August and September—Supplies Will Likely be Further Curtailed.

IMPORTERS of cutlery are not looking forward with any degree of calmness or placidity to the future. One importer of English cutlery states that he received some good sized shipments in August and September this year of articles that had been on order for months previous. Since that time there have been no further arrivals, and there is little prospect of much coming forward in the near future. Other concerns have been out of the market for some time on English pocket knives, and there has been eager inquiry for goods of this class through the various trade channels. Manufacturers are taking no further orders for English goods as the trade in that country is now largely disorganized through the lack of help. United States manufacturers have been sending their lines into this market and there has been a good trade in this quarter. One importer who in ordinary times depended largely on lines of British manufacture has found that his selling operations have been greatly augmented through his ability to secure goods in the United States. Some Japanese lines of cutlery have been coming into the market also, but this trade is still in an experimental stage as some have preferred to wait until the worth of the goods has been firmly established. Some samples that have reached this market, however, indicate that the manufacture of cutlery is making rapid strides in Japan.

Manufacture in Canada

There is practically no manufacture of cutlery in Canada as yet owing to the limited field. Certain kinds of table cutlery, such as knives, are being manufactured in a small way. Reports were current a short time ago that there was probability of the establishment of a cutlery factory in Canada, but as yet nothing very definite has taken place in this respect. One dealer points out that the field in Canada would seem to be too restricted to hope to compete with large English and United States manufacturers. The country with a population of eight million has not the market possibilities of a country with one hundred millions. It is the volume of dozens of certain types of pocket knives that enables the manufacturers to turn them out at a reasonable price. One large manufacturer in the United States recently received an order for 3,600 dozen of a single number. This would be 43,200 pocket knives of the same type. Such an order would be impossible with a Canadian manufacturer unless perchance he specialized on a particular kind of knife and confined his attentions to a very few numbers. Large manufacturers of cutlery have hundreds of different patterns of pocket knives in their complete line in order that all classes of trade may be catered to. The cutlery business is one of the highly-specialized industries which requires a large territory from which to draw trade. Canada has the area, but the population is still somewhat scattered. As the country fills up with an agricultural and manufacturing population there can be no doubt but that the cutlery business will be of growing importance. In the meantime Canadian importers are giving some thought to the matter of immediate supplies for this market. With the shortage of labor both in Canada and the United States becoming more acute there is the possibility that supplies from the United States will come forward in ever diminishing ratio. One dealer who has been selling lines of United States manufacture for some time past stated that he has been unable to get further orders placed in that market since the spring of this year. Goods that were on order have of course been coming forward. Inquiry for cutlery has been quite keen and sales from existing stocks have been very good.

Harness Market is Very Firm

Recent Heavy Purchases of Harness Leather From Canadian Tanners by United States Harness Manufacturers Has Advanced Price in Canada 4c to 8c Per Pound.

AS the result of the big demand for harness leather in the United States a very firm situation has developed in Canada. The United States Government recently placed orders for harness that required 355,000 sides of leather. To secure this amount the manufacturers of leather scattered abroad to secure the leather from whatever source they could. They came into Canada and made purchases that will take the output of Canadian tanneries on this leather for the next three or four months. One of the direct results has been an increase of from 4c to 8c per pound in the price of harness leather within the past week. The buying movement on the part of the United States started out three or four weeks ago and all Canadian tanners are now busily engaged on this class of harness leather. Harness leather which two or three weeks ago sold at a range of price from 64c to 69c per pound has been advanced until the range is now 72c to 73c per pound. The manager of one of the large leather concerns is authority for the statement that this increase would represent an increased cost of $3 to $4 in a set of heavy team harness.

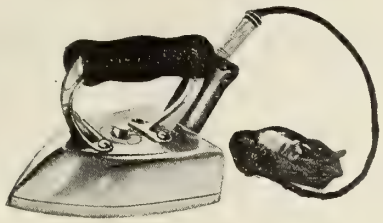
Harness Manufacturers Booking

At the present time harness manufacturers are engaged in booking orders for spring delivery. Since the beginning of the war there has been an approximate advance of 33 1-3 to 40 per cent. in the price of harness. The last recent advance in the price took place in the early summer. Manufacturers are now anxious to book for spring delivery in order that their factories may be kept running during the winter. They usually protect themselves in their purchases of leather for some six months in the future. Contracts that have already been placed by some concerns will see them through with their spring orders without the necessity of advancing prices. Others who have not protected themselves so far into the future on their leather purchases will find that the dearer leather will be reached much sooner. As soon as the dearer leather is reached the price of harness will necessarily have to follow upward.

Expect Good Year for Harness

Harness manufacturers in the West and those who have headquarters in the East with branches in the West are anticipating that the coming season will be one of good business. The farmer in the past year or two has not been making heavy purchases of harness, but has been getting along with his old harness as best he could. With the prosperity that has come to the West during the past three years as the result of good crops and good prices it is expected there will be a readiness to buy when the time for plowing comes round next spring. Eastern farmers have been inclined to get along with the minimum purchases of harness during the past three years and while the trade is expected to be good in the East next year, the greatest increase is expected from the West.

Wholesale dealers in harness hardware such as bits, snaps, rings, whips, curry combs, and similar lines cannot see any lower prices in the immediate future. In fact the tendency to them seems to be in the opposite direction. In seeking to place orders with manufacturers they have been unable to obtain them except at advanced prices in many instances. The curtailment of the amount of steel available for the domestic trade by reason of the increased tonnage required by the United States Government for war purposes is making the manufacturers compete eagerly for any available stocks. While the price on steel and iron has been established by the United States for purchases that the Government will make there is no stipulation that the prices shall apply to the domestic manufacturing trade. As a result there is a constantly firm tendency in these lines to domestic manufacturing concerns. With an increased demand for harness next year it is anticipated there will also be a good demand for harness hardware.



Electricity Solution to Labor Problems

As It Applies to Household—Breakfast Cooking While Housewife Sleeps—Washday Holds no Terrors—Ironing Day Prospects Brighter—Cleaning the Rugs and Carpets—The Electric Stove—Electricity on the Farm—Four Weeks For Xmas Trade.

THE continued drain on available labor has affected the retail hardwareman as well as the industrial, farming or household activities, but in the labor shortage a splendid opportunity is presented to the hardwareman to develop sales to the householder of real labor-saving devices in the form of the many electrical conveniences now on the market.

As It Applies To the Household

It might be well to look over the duties of the household and then consider how the labor entailed by the old methods may be very largely eliminated. Starting with the early morning duties of preparing breakfast, there follows as the day of the week dictates, washing, ironing, sweeping and sewing or the everyday preparation of meals, dish-washing, etc. For the cool nights of fall and winter before the furnace is started, there is the question of heating and

on the hot, suffocating days of summer the problem of how to keep cool—these might also be taken into consideration.

Breakfast Cooking While Housewife Sleeps

The majority will confess a desire to sleep as late as possible in the morning and usually breakfast means a decided rush, once the ordeal of rising is over. Electric stoves of all sizes and styles have been devised, one of the latest of which to be installed is the automatic electric stove.

The automatic electric stove would already be performing its function of cooking the porridge (which was prepared the previous night) while sleep still enshrouded the household. By setting the switches and time clock for the morning meal there is no worry—no rush downstairs to get the fire started—the breakfast is already well under way when the housewife arises.

There is no hard work entailed in inserting the plugs which connect up the electric grill, the electric percolator and the electric toaster. In less time almost than it takes to write, the bacon is sizzling, the coffee is "percking" merrily, the toast is being made, and by the time friend hubby and the family come down, their breakfast is ready for them.

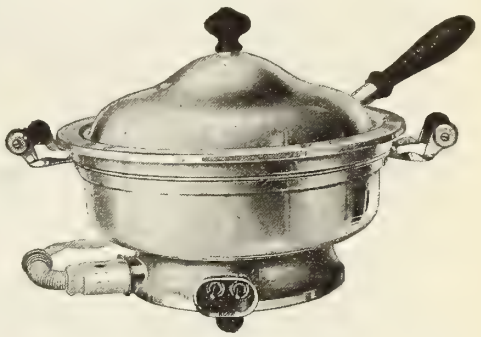
Consider the appeal in this which the hardwareman can make, not only to the housewife but to the man of the house. Every man, if he had an opportunity, would enjoy his breakfast so much more if it were always ready and waiting for him—if he didn't have to get up and start the fire or have his wife perform this menial task.

Even Dish-washing Difficulties Overcome

Then there is the dish-washing, a messy, time-consuming process under the old method. Electricity has come to the assistance of the housewife again and dishes can be washed thoroughly in boiling hot suds, rinsed thoroughly in hot water and—dry themselves.

Wash-Day Holds No Terrors

The back breaking, tedious, all-day job of washing is no more a necessity—the scrub board can be thrown into the discard—the electrical housewife piles her clothes into her electric washing machine, turns on the hot water, adds soap and turns a switch. It takes only about 15 minutes for that lot to be done, rins-



ing is easily accomplished and the motor-driven wringer takes care of its work easily. Under circumstances such as these, washing can usually be done in a couple of hours, the clothes out on the line and the housewife ready for other duties rather than done out for the rest of that day and probably the next.

Even Ironing Day Prospects Brighter

If washing day formerly held terrors for the housewife, no less was this apparent when ironing day followed and the rule was to stand over a scorching hot fire. Now the electrical housewife connects her iron to a light socket and has no troubles changing her iron every few minutes to get one that is hot—her electric iron is always hot and in summer weather can be carried outside if desired without the necessity arising of tramping back and forth to a hot stove.

Cleaning the Rugs and Carpets

Perhaps no more tiring duty in the house exists than that of sweeping—it just seems to take the best energies of a whole day, but even that has been overcome by doing it electrically. The

EDITORIAL COMMENT

EDITORIAL BRIEFS

CHRISTMAS is only four weeks away.

* * *

NOW for the home stretch on the Victory Loan—make all the previous records look like the work of amateurs!

* * *

DECEMBER 1 closes the lists to the Victory Loan. See that your name is down as one of the subscribers and to the bottom of your pocket book.

* * *

BEATING the Kaiser—the Victory Loan will aid in attaining this result more quickly. Have you subscribed to the limit of your ability? You should!

* * *

WHEN it comes to real, useful and beautiful Christmas gifts the hardwareman has the variety to satisfy the most exacting. It's a point to remember in your newspaper advertising—your store interior and windows should make it increasingly evident.

STEEL AND IRON PRODUCTION THREATENED

LATEST advices from the United States indicate that the decided curtailment of production is an alarming feature in the iron and steel industry. This is said to be resulting from inadequate supplies of coal and coke; some blast furnaces continue banked, and in some districts mill and furnace production has been cut down anywhere from 25 to 50 per cent.

Government requirements are being felt by the almost continuous stream of orders pouring in on the manufacturers. A huge tonnage of shell steel is going to domestic manufacturers and it is understood that producers will furnish large quantities to Canadian manufacturers who are getting shell contracts from the United States Government.

It is stated that the inquiry for pig iron is in excess of sales due to a growing shortage in some grades. The irregularity in furnace operations and war demands make open tonnage uncertain, hence sales are being executed carefully and in some specialties it has been necessary for buyers to pledge that the metals will not be used for non-essentials of war.

Adjustment to the new scale of prices adopted is proceeding rapidly and with the manufacturers' committee working almost continously it is expected all prices will soon be in line with those already fixed.

The requirements of the Government are now assuming such proportions that the steel consuming trade is experiencing the first break between industries which are essential and those non-essential. Priority rulings multiply and there is no doubt but that the steel scarcity in certain lines is increasing, which means the list of those businesses affected will continue to grow.

THOSE OLD ACCOUNTS

ELSEWHERE in this issue appears a form of letter which many retailers can adopt with assurance of a fair measure of success in their collection campaign against those old accounts and in favor of the Victory Loan. The final drive until December 1 should result in swelling the splendid returns now in for our country. Getting a sure 5½ per cent. return on those old accounts when invested in Victory Bonds is certainly better than trying to collect the interest and running the risk of complete loss when left outstanding. Making the appeal that you with to invest the returns in Victory Bonds will strike a responsive chord with many of those who owe you accounts—with those whose sensibilities are dulled to any reasonable request, stiff action should be taken to assure payment.

It may be that returns will not be exceptionally large in the time remaining but the use of this collection letter may bring in returns from sources which you had almost given up as productive. Most certainly all means possible should be employed to clean up those old accounts—action right now will mean that you can invest more money where you have the backing of the whole of Canada as security.

THE CHRISTMAS TRADE OUTLOOK

IN this issue of HARDWARE AND METAL appear a number of articles dealing with the Christmas outlook from the hardwareman's standpoint. There is no question of doubt but that in soliciting gift business the hardware merchant has a wide field for his activities. There is such a variety to his stock that his

appeal may be made to all the members of the community which he serves. This is of such real value in itself that aggressive measures to secure Christmas business are sure to be rewarded as never before.

There remain only about four short weeks in which to make a strong effort to secure your share of this holiday business. The hardwareman is undoubtedly gaining greater prestige each year as a disperser of gifts that are useful and there should be a splendid opportunity to smash all records this season. From express wagons to cut glass, there should be something for each member of the family —there is no time to delay in presenting your case— make former December records look small and the finish to the year's work big. 1918 will present a far brighter outlook when the records of this year's business are a matter of congratulation to yourself.

THE POSITION OF CUTLERY

REVIEWING the action of the British Government in prohibiting the manufacture of stainless steel for cutlery *The Ironmonger,* England, says in part as follows:—

Although the cutlery manufacturers from motives of public interest have refrained from protesting against the Order prohibiting the manufacture of stainless steel for cutlery, they realize fully that the measure will deal a serious blow at the trade, and cause a heavy loss of turnover. In consequence of the popularity of stainless knives, the embargo on the use of open-hearth steel for table cutlery was felt only to a limited degree, as shell-discard material has sufficed for most of the cheaper classes of goods. There is no restriction upon the use of crucible or shear steel in cutlery making, although this material is scarce and expensive, and does not lend itself to mechanical forging as open-hearth steel does. It has been necessary to advise customers in the Dominions of inability to execute orders in hand representing many thousands of pounds sterling, and it is feared that much of this business will be lost to Sheffield because a large proportion of the public are buying stainless knives. Stocks in the hands of Colonial shopkeepers are, however, so low that it is believed that they will need all the cutlery that can be supplied to them irrespective of type, quality, or price. Already cables have been received advising that if stainless cutlery is unobtainable, knives made of shear steel may be substituted. Fears are expressed lest the embargo should enable American makers to capture Sheffield's overseas trade in stainless cutlery, but the situation in the United States is not very clear. The American public is keen on this cutlery, and has bought a large quantity from Sheffield. One of the largest American cutlery-manufacturing houses announced early in the year that for the future it would only sell stainless table knives, but it is not known whether this firm had arranged to have its steel made at home or to import it. The situation is complicated by the fact that the Sheffield inventor of stainless steel holds a patent for it in the United States.

THE COST OF BUSINESS

THE investigation of the William Davies Company brought to light one pregnant fact with regard to business, and that is, that the retail business, however favorably situated and however well conducted, entails a very heavy charge for administration. Unquestionably the William Davies Company's retail stores do business under conditions as favorable as those of the average retail store, even if not more so. They handle largely the products of their own firm, which it is presumed they buy on favorable terms. It is well then for the trade to consider a few figures brought out during the course of the investigation. The sales of the Toronto stores of the Company during 1915 totalling $1,697,274 earned a gross profit of 21.4 per cent. After deducting the costs of operation the net profit amounted to 3.89 per cent. During 1916 the sales were $1,496,148, operating expenses were 19.3 per cent., showing a net profit of 2.7 per cent. In 1917 sales of $1,499,408, after deducting operating expenses of 20.25 per cent., showed a yield of 2.62 per cent.

The history of the Ontario stores showed a similar story. In 1915 a gross profit of 21.46 per cent. was reduced to a net profit of 4.38. In 1916 gross profits of 21.8 per cent. showed a net profit of 4.76. In 1917 a gross profit of 22.99 showed a net profit of 3.11.

These are facts that it behooves every merchant to ponder. These records show that it cost this company over a period of three years an average of something over 19 per cent. to do business. These stores are carefully managed, with an eye to producing profit. They are, as has been stated, favorably situated for cutting this cost as it, possibly, cannot be cut by the average merchant. The inference is obvious, that unless a business is producing at least 20 per cent. it is standing still as far as profits are concerned. If it is producing less, then the merchant is on the high road to bankruptcy.

Still another point is made manifest by these figures, and that is, that it cost more to do business in 1916 than it did in 1915 and more again in 1917 than it did in 1916, and it is a fairly obvious deduction, reasoning on present conditions, that costs in the coming year will be still higher.

The point that we would make in this connection is, that it is absolutely imperative that the merchant should know exactly what he is making, and exactly what it costs him to make it. A general idea will not do. Anything less than an accurate absolute knowledge is business suicide.

Victory Loan Justifies Democracy

This brief address on the character and meaning of the Victory Bonds delivered by Wm. C. Noxon, one of the foremost bond experts in Canada, before the staff of the MacLean Publishing Company, contains so many striking statements and such clear exposition of some of the technical points in reference to the bonds, that is is believed it will be of deep interest to all our readers. For that reason it is reproduced herewith.

"IN the first days of war," Mr. Noxon began, "Britain was able to raise all the money required to finance the war, herself, but when she had to advance money to the Allies it was necessary for Canada to do the bulk of her own financing in connection with the war. Something in the nature of a contra account was opened and now, while Britain pays our soldiers and looks after other expenses overseas, she charges them to us. In return we pay for Britain's purchases of wheat and manufactured goods in this country and charge them to her. That is why we must raise money here. If we are called upon for too great an amount Britain will provide the difference.

"We are helping to keep the industrial prosperity going and to help the Allies in the war. As an illustration of how this plan works out, Canada and the United States recently put up $400,000,000 between them to move the wheat crop, knowing that Britain would not want to send this money out.

"The Government and the people are bound together by the principle that underlies other institutions and it is this principle that is at stake. It is a question of whether 'might is right' or 'right is might.'

"This money is borrowed from the people by the people. A Government is only so strong and wealthy as its citizens character and wealth is good. An ordinary bank note you accept willingly and with complete confidence, and yet that note has behind it the same security as this bond. The difference is that the bill is payable on presentation at any time without interest, while the bond is a promise to pay at a specified time with interest.

"Every bond is an agreement, but bonds are different in character. The Government bond or debenture is a straight promise to pay gold for the paper when due. There are coupons attached stating that so much interest is payable at certain dates at the set rate. The bond with the coupons, is payable in most cases 'to bearer' in order to facilitate handling. If they are burned you can get new ones issued providing you have some evidence to show you possessed them. They are so designed that they can be passed through the ordinary channels of business with ease.

"Government security affords the highest possible security for borrowing purposes. The bank lends 90 cents on the dollar on government securities. That is value enough, and furthermore a bond is a recommendation. A man who owns government bonds is well thought of by the bank and it will help him in borrowing money.

"The most profitable bond from the standpoint of profit is the longest term bond. The most interest in the meantime is on the shortest term bond, because the Government gives every person a bonus which is not apparent on the face of it. On the 20 year bond you get 5.60 per cent. and on the five year bond you get 5.80 per cent."

Mr. Noxon pointed out that with money available at 4 per cent. under normal conditions, the owner of a Government bond at 5½ per cent. interest would be getting $5.50 per year on a $100 bond while the other money lender would be getting $4. On this basis, Mr. Noxon pointed out that the bond would sell at a premium of $112 at the end of ten years. With interest added to this it was evident that the bond repaid interest at the rate of 6¾ per cent. as compared with 5.80 per cent. on the five year bond.

"In the meantime" said Mr. Noxon "the money is not absolutely tied up, and the bond will sell better than any other securities. Wealthy corporations of the United States buy bonds from 100 to 200 years recognizing that the investment opportunity is so favorable."

Mr. Noxon stated that in his opinion Canada would recover quickly from the effects of the war and he pointed to the day when Canada would be one of the greatest countries in the world.

"It is desirable that all be done to end the war. We have no desire to prolong it, but to drop it now would be to return to worse conditions in a short time.

"We want to prove to every country of the world that democracy does not breed selfishness, but that it breeds wisdom, fellowship and self-sacrifice. If we cannot prove that we had better take an autocratic government.

"There is no question about what these bonds are worth. The purchaser rises in the opinions of his fellow people. And there is no question about the country needing it. Canada with 7,000,000 people should be able to put up $300,000,000. The greatest number of subscriptions will prove the strength of democracy.

"Sacrifice is the highest form of patriotic privilege. The country is governed by principles so democratic that, being right, you feel you have to see this thing through to the end."

(Continued on page 67.)

Yourtown, November 23, 1917.

Dear Customer:

This letter has to do with Victory Bonds.

Like you, probably, we wished to subscribe for as many of these as possible. But we found ourselves unable to take as many as we would like—for the simple reason we had not the ready cash necessary.

Our business requires a fair amount of cash on hand for its effective operation. Besides which our customers, taking them all and sundry, have several hundred dollars of our money.

You can see that an unpaid bill is pretty much the same as money lent. We are writing you now because there is a sum due to us from you—as per statement enclosed.

It would help us to subscribe for Victory Bonds—and so serve our common country—if you would promptly respond to this request for payment of the account as rendered. While the sum by itself may not be very large, yet when one takes into account all amounts owing by all our customers, it really amounts to a very considerable sum that we have loaned to our customers. Now if we had Victory Bonds, the country would be better served, and our money would be earning us 5½% interest.

You know how delightful it is when all who may be owing you money settle up. It is good for them and you. Well, it is just the same in our case: we will all feel much better if you will drop in and say to us "Please receipt this bill." Or if you will send a cheque it will be the same thing.

We are really counting on your prompt response to this appeal.

Yours very truly,

JOHN BROWN, your Hardware Dealer.

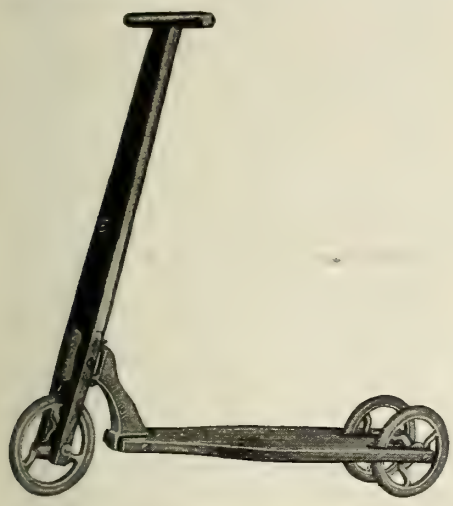
Here is a letter the merchant may use with profit to his country and with profit to himself.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

ROLLOMOBILES AND RIDAMOBILES

E. C. Stearns & Co., Syracuse, N.Y., are putting on the market rollomobiles and ridamobiles for children. It is claimed that no better means of safe, exhilarating fun for the kiddies exists than that obtained through the use of the



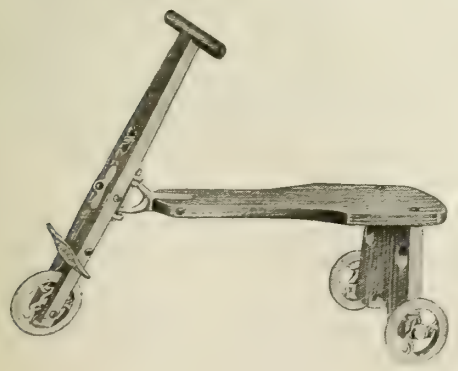
A Rollomobile.

rollomobiles and ridamobiles. There are nine different models, six of the rollomobile type and three of the ridamobile.

The rollomobiles are built for youngsters to rest one foot on and push themselves along with the other. There are three two-wheel and three three-wheel types from the plain steel wheel to the rubber-tired article. The steering post has a T handle which it is claimed makes it easy to guide properly.

The ridamobiles are to sit upon, the construction otherwise being similar to the rollomobiles. There is one plain steel wheel and two rubber-tired steel wheel types and on each side of the steering post is a step on which the feet may rest when coasting.

It is stated these are finely finished,



A Ridamobile.

durable, strong and constructed with no corners or sharp points to hurt children's hands or clothes.

BAITS AS CHRISTMAS PRESENTS

By putting their baits and reels in holly covered boxes, the South Bend Bait Co. of South Bend, Ind., claim to have made a departure which will influence many sales during the Christmas season in the sporting goods department of any hardware store carrying same. The baits are put up three and six in neatly divided boxes and the reels in individual boxes. The attractiveness of these baits is due in a great measure to the successful blending of bright colors.

ELECTRIC AIR HEATER

A new electric air heater has just been placed on the market by the Canadian General Electric Co. of Toronto. It is claimed to be of great service for the bathroom, sickroom or nursery and to be made so substantially that it will last for years. It can be attached to any lamp socket and it is stated costs very little to operate. This heater is light in weight and may be moved wherever required, and is supplied with 8 feet of cord and attachment plug.

GIANT BOILER TUBE CLEANER

I. H. Culp, 269 York St., Hamilton, is putting on the market the Giant Boiler Tube Cleaner, which, it is claimed, is heavier and more durable than others of

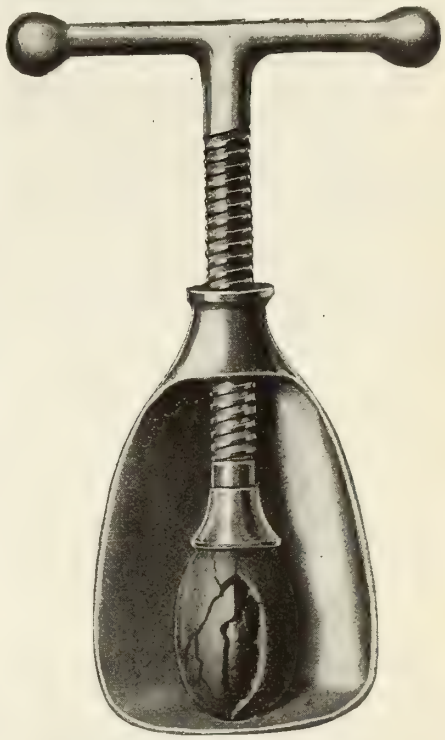
The Giant Boiler Tube Cleaner.

a similar type. These are made in sizes 1¼, 1½, 2, 2½, 3, 3½ and 4-inch and are said to be especially adaptable to cleaning marine boilers. It is stated stock is on hand to take care of all demands and orders are being solicited for 1918 shipments.

IDEAL NUT CRACKER

It is claimed by the Frank B. Cook Co., 326 W. Madison St., Chicago, that the Ideal nut cracker which they are now marketing, cracks the nut without crushing the kernel. It is stated that the Ideal will crack pecans, almonds, filberts, Brazil nuts, etc., and will not scatter the shells over the floor, which is one of the greatest objections to old-fashioned nut crackers. For this reason they claim it is better than a hammer, or any hammer and bowl arrangements.

To use, simply place the nut in the cracker—you will find nut is self-positioning. Place palm of hand over nut



The Ideal Nut Cracker.

and turn the handle. Quick acting.

The Ideal is nickel plated and is packed in an individual folding box.

INDUSTRIAL DEVELOPMENT

Canadian Northern Preparing for Changes After the War

An appointment of particular interest to manufacturers and others interested in the development of the country's industries and resources is that of C. Price-Green to be Industrial Commissioner of the Canadian Northern Railway system with headquarters at Toronto.

The appointment is made in anticipation of the industrial reorganization and development which will follow the conclusion of peace in view of the great number of industrial opportunities on the lines of the Canadian Northern system. The aim of the department is to locate industries and to develop the natural resources along the company's lines.

EVENTS IN THE TRADE

BUSINESS CHANGES

Montreal.—J. E. Naud, hardware, has discontinued business.

Melfort, Sask.—G. B. Jameson, hardware, has sold to Bishop & Moser.

Spring Valley, Sask.—Spring Valley Hardware Co. has dissolved partnership.

Emerson, Man.—C. Whitman (Estate of), hardware and implements, has discontinued.

Bresaylor, Alta.—R. R. Farrell, lumber and hardware, has been succeeded by D. C. Foster & Co.

Stoney Plain, Alta.—Estate of Hardwick & Rosell, general store and hardware, has been turned back to partners.

TRADE NOTES

Red Deer, Alta.—W. E. Lord & Co., department store, are adding a hardware stock.

OBITUARY

Winnipeg.—H. E. Cheney, of H. E. Cheney & Sons, tinsmiths, is dead.

TRADE NOTES

Ottawa.—F. W. Mahon, hardware and stoves, has sold stock and fixtures.

Montreal.—B. Mongeau, hardware, has been registered.

PERSONAL

Lieut. Robt. Horne, son of R. Horne, hardware merchant, of Sudbury, Ont., has been wounded.

William Starke, of Starke, Seybold & Co., is holidaying at Hot Springs, Virginia, and will be absent several weeks.

H. E. Dripps, representing the Miller Lock Company, of Philadelphia, was calling on the wholesale hardware trade in Toronto during the week.

Geo. W. Griffiths, president of the Geo. W. Griffiths Co., Ltd., manufacturers' agents, Winnipeg, left this week for a trip through Western Canada when he will call on the leading wholesale houses. He is expected back early in December.

Geo. A. Merrick, vice-president of the Merrick-Anderson Co., Winnipeg, is spending a few days in Toronto. Mr. Merrick, who is accompanied by J. M. Lynch, their buyer, spent some time in Minneapolis, Chicago, Hamilton and other points en route and expects to go to Montreal and other Eastern cities before returning West.

John M. Lynch, buyer of the Merrick-Anderson Co., Winnipeg, spent a few days in Toronto on business early in the week. Stopovers were made en route at Minneapolis, Chicago, Hamilton and other points. Mr. Lynch reports business conditions in the West as excellent and prospects for 1918 exceedingly bright.

NEW PRESIDENT STANDARD OIL COMPANY

Walter C. Teagle, Head of Imperial Oil Co., Takes Very Important Post

Walter C. Teagle, president of the Imperial Oil Co. at Toronto for the past three years, has been elected president of the Standard Oil Co., of New Jersey. Mr. Teagle has occupied one executive position after another with the chief oil producing and refining companies of the continent—his family has been identified with the petroleum industry for two generations.

Mr. Teagle, who at the age of thirty-nine has been called to an office which ranks among the first five executive positions in American commerce, is widely known in the oil business throughout the United States and Canada.

Like many other modern executives, Mr. Teagle has sedulously avoided publicity. Among his friends—and he has many staunch friends—he is known as an earnest student of industrial and social reforms, and he has introduced many improvements in working and living conditions among the nine thousand employees of the Imperial Company since he assumed the direction of its affairs.

While the chief recreation of the new Standard Oil president might be said to be work, he plays a good game of golf.

INDUSTRIAL

Hastings, Ont.—The plant of the Hastings Tanning Co. was completely destroyed by a fire on Oct. 23. The loss is about $200,000. The Breithaupt Co. of Kitchener controls this concern.

Port Arthur.—Work on the new plant of the Port Arthur Pulp & Paper Co., though held up by the advent of cold weather, is progressing favorably. It is expected that the mill will be in operation early next month.

MONTREAL NEWS ITEMS

P. H. Jagger, of Toronto, representing the Meyercord Co., is in Montreal in the interests of his firm.

Wm. Starke, of Starke, Seybold & Co., has returned after a very enjoyable stay at Hot Springs, W. Va.

The trade here were visited this week by Mr. Potter, representing the Potter Mfg. Co. of Geneva, Ohio.

Jas. Reed, buyer for Caverhill & Learmont, has been indisposed, we regret to say, for the past few days.

A. C. Bowman, with the Russell-Erwin Company, spent part of this week in Montreal, calling on the trade.

A. T. Black, of the Martin-Senour Co., is in Toronto on a business trip and will return to town in a day or two.

Mr. Catlin, of the Corbin Cabinet Lock Co., New Britain, Conn., was a business visitor to Montreal this week.

Mr. North, representing O. B. North Co., New Haven, Conn., is in Montreal on business connected with his firm.

Mr. Brainerd, representing the Brainerd Mfg. Co., of Rochester, New York, called this week on the Montreal trade.

North Bros. of Philadelphia, manufacturers of the "Yankee" tool line and of ice cream freezers, were represented in Montreal this week by Mr. Kinsman.

Many officers of the local hardware concerns are giving fully and freely of their services this week to the end that Canada's great Victory Loan may be a real and decided success. There will be a great deal more enthusiasm still as a result of the splendid example thus set.

ST JOHN, N.B. NEWS

John F. Hourihan, formerly employed with W. H. Thorne & Co., has been killed in action in France.

The Nordin Mills, near Newcastle, N.B., recently taken over by a shipbuilding company, have been destroyed by fire with a loss of about $35,000.

Stanley E. Elkin, general manager of the Maritime Nails Works, has been nominated as the Liberal member of the Union ticket in the constituency of St. John-Albert.

Members of the hardware trade in St. John, always have been among the most influential political leaders in both camps. In the present campaign they are united. Every large hardware concern was prominently represented at the Union conventions which have been held and their members have pronounced in favor of union.

News was received this week that former members of the staff of T. McAvity & Sons have been wounded in France. They are Norman L. Bourne, wounded in the shoulder and back, and Leon C. Vincent, who suffered gunshot wounds in the head.

J. G. Harrison, secretary of W. H. Thorne & Co., addressed the St. John Rotary Club this week on the development of the talking machine, a line in which his company is interested.

N. C. R. CONVENTION OF SALESMEN'S WIVES

The success of the recent convention of the National Cash Register Co. salesmen's wives at Dayton, Ohio, was due in a great measure to the interest and enthusiasm of the women who attended it. President Patterson in his address brought out one new thought which seemed to meet with general approval—that was, the woman should know more about her husband's business and try to help and encourage him as she had never done before. The interest was manifest from the time of President Patterson's announcement and it is hoped the results of the convention will be a decided improvement in business conditions generally.

FLUOR SPAR IN CANADA

Within the past few days, Mr. Dingee, of the Central Pigments Corporation, was in Montreal, and while there appointed B. & S. H. Thompson sole representatives for Canada for fluor spar. This is a well known flux which has formerly been hard to procure, but electro furnace manufacturers will now be in a position to obtain their requirements from this firm on short notice.

A. RAMSAY & SON CO. CONVENTION

Results of Year's Business Satisfactory —The Slogan "Buy a Victory Bond" in Favor

The A. Ramsay & Son Co.'s Annual Sales Convention was held in Montreal last week. It was announced that the year's business had been highly satisfactory and every confidence was expressed as to the future. As the convention took place at the time when the Victory Loan campaign was in full swing, "Buy A Victory Bond" was naturally and appropriately adopted as the slogan throughout the convention, and the entire selling force are now subscribers to the loan.

BUYS BONDS FOR 13 CHILDREN

From Winnipeg comes the news that Adhemar Renuart, general merchant, of St. Pierre, Man., has purchased 18 separate bonds for members of his family. Thirteen are for his own children, and besides he bought a bond for his wife, one for his aged father, one for his brother, one for his brother-in-law, as well as one for himself. The total amount subscribed was $3,000.

NEW GLASS MANUFACTURER

The Humphrey Glass Co. are building a glass manufacturing establishment in Moncton, N.B. They anticipate manufacturing bottles from ¼ oz. to 36 oz., also fruit jars, milk bottles, prescription bottles as well as lamp chimneys. It is expected this industry will prove beneficial to Moncton, and to all the Maritime Provinces. It is stated that conditions are very favorable at this point for the manufacture of glass.

ELECTRICITY SOLUTION TO LABOR PROBLEMS

(Continued from page 49)

vacuum cleaner run over the rugs and carpets does the work better and with no more tedious operation than that of guiding the sweeper over the surface to be cleaned.

The labor shortage is felt by the housewife very keenly when planning her new dresses or clothes for the children. It is so difficult to get things made when they are wanted that the electrical sewing machine is brought into the home and the money saved in dressmaking bills will soon overcome the initial outlay involved; besides this, there is the pleasure now possible in doing these tasks herself.

The Electric Stove

Turning a switch is all that is necessary in operating the electric stove. The automatic can be set so that the dinner will start cooking at a certain time—the heat will be regulated to the proper degree—and there need be no hurry and flurry to cut short an afternoon visit or shopping expedition. Arriving home at six o'clock everything is practically ready to serve and no difficulty is entailed in the serving. Other models of electric stoves are available and their convenience in use would indicate a steadily increasing demand.

Labor Saving—Comfort Giving

In looking over the many appliances being used successfully and increasingly by the electrical housewife, there is found the percolator, the toaster, the grill, the stove among those which are materially helping in the cooking. For the heavy, tedious tasks, the electric washer, sweeper, sewing machine and iron do much towards lightening these duties. Among the many other things which add to the comfort of the home might be enumerated the electric fan, electric heater, heating pads, etc.

In the days of summer heat when a breath of air would be welcomed and is not available, the electric fan comes to the rescue. Turn the switch, the air is put in circulation, the enervating effects of excessive heat are counteracted.

No less welcome on cool fall and winter nights before the furnace is started, is the warmth generated by an electric heater. The chill in your rooms is removed, comfort is yours in sitting around reading or writing.

For the sick room or for just cold feet, praises are being sung for the electric heating pad on which the heat can be regulated to the desired volume.

Electricity on the Farm

The hardwareman's trade to a great extent depends largely on the farmer and if the shortage of labor which he feels most keenly has some possibility of great relief, it might well to study carefully the steps possible electrically in this respect. It is true that perhaps a very small proportion of farmers are so situated that they enjoy central station current but it is also true that small gasoline-engine driven, electric-generating sets are now available which require comparatively little care and attention.

What would the use of electricity mean on the farm? Farm motors pump water, saw wood, clean and clip live stock, milk cows, drive cream separators or churns and thresh wheat, besides performing the many household duties as enumerated above for the housewife. The prospect of life on the farm is decidedly attractive in view of the possibilities in the use of electricity and with farm tractors and automobiles relieving the pressure in other directions.

Four Weeks For Xmas Trade

,Only about four weeks remain to push the sale of these electrical appliances for the Xmas trade. The sale of real, useful Xmas gifts is where the hardwareman has a strong point to emphasize and this will apply this year as perhaps never before. The foolish knick-knacks are by no means as popular as in former years—the demand is for useful gifts, those which are a reminder every day of the year of the giver. The increasing demand for things electrical is one which can be taken advantage of in suggesting Xmas presents to your customers, which will be appreciated.

Electrical goods classify with the hardwareman's stock and present opportunities for increased business. The small lines lend themselves particularly well to display, and the sale of any of these labor-saving or convenient appliances will establish that friendly spirit in your customers' minds which leads to continued support.

HOW TO MEASURE THE VALUE

(Continued from page 47.)

"Do you advise getting rid of lines of goods which do not show profit even if they have advertising value in the store?"

Mr. Stockdale replied that it would depend upon what it was costing him, and added that he knew of stores that kept lines for their advertising value alone.

"Could these lines be placed on a paying basis?" was asked.

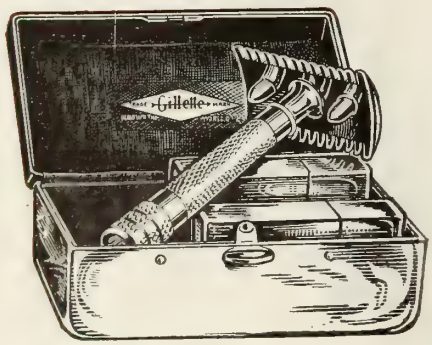
"There is no line that cannot be made to pay if conditions are right," replied Mr. Stockdale.

Returning to the question of departmentalizing the store, the question was asked as to whether it would be advisable to get rid of that section of the store whose departments merely "broke even" and to maintain only that portion of the store which showed a profit.

Mr. Stockdale replied that it would not be advisable. "I would first endeavor to put those departments on a paying basis, and then if all efforts did not avail I would cut them out unless certain lines were absolutely necessary from an advertising standpoint."

Are You Sure You Have Enough Gillette Safety Razors for a Brisk Christmas Trade?

The Gillette "Aristocrat"
The French Ivory Case appeals to women shoppers and to fastidious men.



Standard Set in Metal Case.
No. "460B."

From the rush of hurry-up orders that pour in on us every year just before Christmas, we know that a great many dealers underestimate their Christmas demand for Gillette Safety Razors and Blades.

With thousands of men being called to the colors, and thousands of boys just reaching shaving age, more Gillettes than ever will be needed for gifts this season. Our Christmas advertising is even more forceful than usual, and sales are sure to break records.

You can make the most of these opportunities only if you have the goods. NOW is the time to go over your stock and send us your sorting order.

Gillette Safety Razor Co. of Canada, Limited

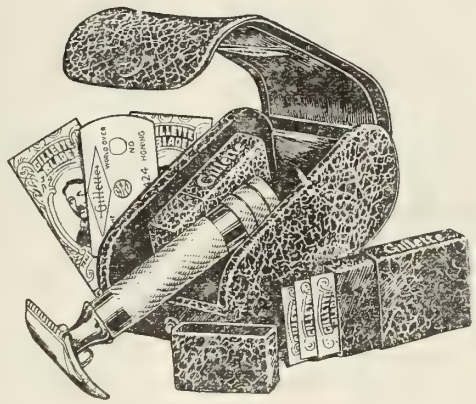
Office and Factory: Gillette Bldg., MONTREAL

Does Your Store Suggest to Everyone a Gillette for Christmas?

Even if you have the most complete assortment of Gillette Razors and Blades in your town, it won't bring home the business for you if you don't impress it on your community.

Christmas shoppers go about with many ideas in the backs of their heads—including the fitness of the Gillette as a gift for a real man. It just needs a Gillette before their eyes, in your window or your store, to crystallize this idea into quick and easy sales.

The Gillette Sets themselves, with their silver, plush and leather, make splendid displays. Our Christmas store cards round out the equipment for window and counter trims that will attract attention and bring across the five dollar bills in a procession that you will find most gratifying. If you are short of display cards, write or wire us NOW.



The Gillette "Bulldog"

The young men like this stocky, sporty "Bulldog" Set.

Standard Set in Leather Case. No. 160

Gillette Safety Razor Co. of Canada, Limited

Office and Factory: Gillette Bldg., MONTREAL

THE CLERKS DEPARTMENT

REMARKABLE CAREER OF "N.C.R." PATTERSON

He Makes Workers Happy and Cash Registers for the Whole World—His Simple Success Recipe.

JOHN H. PATTERSON, who is devoting his life to the making of cash registers—and millions—ranks with the few employers who have chosen to spend much of their fortunes on their own employees. Few, indeed, are the millionaires who have given first consideration to those who have helped them make their riches when it is so much more simple and spectacular to build ornate halls and institutions or to proclaim large profits to this or that organization. B. C. Forbes in his "Men Who are Making America," tells how Mr. Patterson has made of his factory and its environment a thing of beauty, has put joy into work, and has made the earning of a living harmonize with the earning of happiness. He writes:—

The workshop of the National Cash Register Company, at Dayton, O., is a steel and glass palace flooded with light. Through its thousands of windows the workers can feast their eyes on exquisite views. The air throughout all the buildings is changed every fifteen minutes. Hundreds of shower baths are provided and every worker is allowed to enjoy them in the company's time. Of course, there is a hospital with a doctor and trained nurses in attendance; employees receive electric massage treatment free of cost; there are numerous rest rooms for women employees. To avoid the overcrowding of street cars and elevators and to save the women from having to mingle unceremoniously with the men, the former are allowed to start work half-an-hour after the men and to finish fifteen minutes before them. At ten every forenoon and three every afternoon recesses are granted the women workers. The commodious dining rooms furnish midday meals at cost and an orchestra regales the diners with sprightly music.

Every noon hour a moving picture or other entertainment is provided in a hall which seats 1,250, and here those who bring their own lunches may sit and eat while enjoying the pictures, the music and, occasionally, short talks. The men are given the privilege of smoking. By an arrangement with high schools and colleges, vocation training is provided promising youths.

Not one acre of Mr. Patterson's extensive estate, Hills and Dales, is reserved for his exclusive use; every square yard of it is thrown wide open to his employees and to the public. There is not a fence or a locked gate on the whole place. Instead, it is dotted with quaint, rustic camps where all sorts of paraphernalia are provided free for picnic parties—cooking utensils, tables, benches, even flour and waffle machines and distilled water.

A golf course, tennis courts, baseball field and other facilities for recreation are provided, while a large club house permits of dances being held on Saturday evenings and all sorts of concerts, lectures and entertainments throughout the week. There is another club house in the city for the use of employees, and here largely-attended educational classes are held in the winter months.

When he started, over twenty years ago, to treat workers like human beings other employers called him a fool, a fanatic, a socialist, a dreamer. They warned him that coddling labor would bring him nothing but discontent and disaster, but he contended that unless employers showed the working people greater consideration grave trouble would arise sooner or later.

Revolution.

Let us first trace briefly the record of John H. Patterson and the making of cash registers before this turning point was reached.

There were no cash registers when John Henry Patterson was born—December 13, 1844. He was born, almost on the spot now occupied by the National Cash Register Company at Dayton, O. As a lad, one of eight children, he had to work hard on the farm. He received a good education, first in the Dayton schools and later at Miami University and Dartmouth College, where he graduated B.A. in 1867, having previously served in the Civil War as a Hundred Day Man, although then only a stripling.

Set Up As Coal Dealer.

Farm labor had little attraction for the Bachelor of Arts. Commerce appealed to him most, but he could not pick and choose jobs. He wanted to buy and sell things. Having saved a little money, he succeeded in borrowing a little more and set up as a retail coal dealer in Dayton. From selling coal he gravitated to mining coal and iron ore, in partnership with his brother, Frank, in Jackson County, some eighty miles from Dayton.

To enable their miners to obtain supplies, the Pattersons, in conjunction with two other mining concerns, opened a store. Business was plentiful, but profits were nil. At the end of two years the store had not netted a cent notwithstanding that all goods were supposed to be sold on a reasonable margin of profit. There was a leak somewhere.

Birth of Register.

Hearing that a merchant in Dayton had invented a contrivance to keep a record of all sales, Mr. Patterson immediately telegraphed for two of the novel machines. The idea of the cash register had taken birth in 1879, in the brain of Jacob Ritty, a Dayton merchant who, suffering from a breakdown due to overwork and worry in attempting to keep tabs on the details of his business, had started on a voyage to Europe. While in the engine room of the ship one day, he noticed a device that recorded the number of revolutions of the propeller shaft. Why not construct a machine that would record each coin put in the till? Hurrying back, he set to work with his brother, a skilled mechanic, and evolved the first cash register.

Mr. Patterson's was the first order filled. Crude and clumsy though it was, the machine immediately turned the store's loss into a substantial profit. Mr. Patterson's commercial instinct told him that the new invention had unlimited possibilities. "What is good for our store is good for every store in the world," he told himself. At the first opportunity he went to Dayton, investigated the situation thoroughly and, although only a few machines had been turned out, he was so certain of the outlook that in 1884 he bought out the Ritty business and changed the name from the National Manufacturing Company to the National Cash Register Company.

Factory Was Unattractive.

The acorn did not at once grow into an oak. Troubles and obstacles were met at every turn. Construction of the cash registers demanded highly skilled and scrupulously careful workmanship of a novel kind. It was difficult first to teach the workers and then to retain them, as their expert services were sought by others. The factory was located in an unsavory section of Dayton called Slidertown—everybody and everything on the downgrade had a habit of sliding into this section. To work at "The Cash" did not bring a high social rating; in plain language, the better class of young men and particularly young women preferred to earn a living in more respectable surroundings.

John H. Patterson was partly to blame for this unsatisfactory state of affairs. He was not then a model employer. He was neither better nor worse than other factory owners. His interest in his employees was confined to what he could get out of them. And they repaid him in kind. Poor working conditions begot a poor product.

So bad, indeed, did things become that in one year $50,000 worth of machines was thrown back on the hands of the company as faulty.

Patterson Woke Up.

Then John H. Patterson woke up.

He experienced not only a change of viewpoint, but he underwent a change of heart. Adversity taught him humanity. Why should workers treat him with more consideration than he was treating them? Why should they interest themselves in his welfare if he was not interested in theirs? He would adopt a new policy. Also, he installed his own desk in the centre of the factory floor.

With this new spirit in his heart, he went to the factory to study conditions. He saw a woman engaged, as he thought,

in mixing glue in a very unscientific way. He spoke to her. "It's not glue, it's coffee," she told him. Leavings from the previous day were being reconcocted.

Mr. Patterson immediately ordered the manager to arrange to have the women supplied with good coffee every day. He next looked around for other things needing correction. Not noticing any provision for the proper serving of the coffee, he summoned the manager, who gave him a dozen reasons why the factory could not be turned into a coffee house. Mr. Patterson ordered him to rent a house across the street for the purpose. Again there was delay. This time the manager and his assistants were told that dismissal would follow were the reform not instituted forthwith.

Begins Reforms.

The serving of the coffee had an instantaneous effect upon the output of the women. Patterson learned that kindness paid in dollars as well as in disposition. From that day on he never wavered in his determination to improve the lot of his people. One thoughtful innovation after another was introduced and a systematic effort was made to raise the quality and tone of the working force.

Better workmanship and better product brought increased business. Sales increased from a few thousands a year to several score of thousands. Larger buildings became necessary. Slidertown had been cleaned up somewhat under Mr. Patterson's influence, but it was still no Newport or Tuxedo. Mr. Patterson next bought up much of the property in the neighborhood and resolved to spend both money and time in revolutionizing the whole neighborhood.

Most important of all, he engaged the leading firm of architects in America to design a factory building which would be the very antithesis of the ordinary factory. He wanted it to contain every conceivable appointment conducive to the comfort and safety of the workers. He wanted, also, halls for noonday entertainment, for holding of classes, for illustrated lessons and lectures on the different phases of manufacturing the cash register and on salesmanship.

Reforms Boys.

When the glass and steel palace began to be erected Dayton shook its head. Among other things, Patterson was told that the boys of Slidertown would not leave one whole window overnight, that new glass would cost him more than his profits. Patterson took the boys in hand and began to transform embryonic gangsters into young gardeners and young gentlemen. The boys were given individual gardens, received instruction from a head gardener, were shown how to organize themselves into a stock company, were inspired to interest themselves in the work, received prizes and, at the end of the year, were paid dividends from products sold. The company was run entirely by the boys themselves. Also, a club was formed to send city lads to work on farms during summer vacations. This solved the window-breaking problem—and solved, also, problems of more vital importance to the boys and to society.

Bankers Try to Get Him.

His enormous new plant, however, was costing him a mint of money. So were grounds he had bought for the use of his workers and others. The rapid expansion of his business—in two years he sold as many machines as he had sold in the previous twenty-two years—necessitated the tying up of extensive capital.

Like a thunderbolt came the announcement from the bankers that he must pay off loans. Not a dollar could he obtain from any bank in Dayton. This, Patterson's critics and enemies chuckled, would put a quietus to his welfare capers.

It almost did. Patterson, however, was a born fighter. He also was a philosopher. "Thrice is he armed who hath his quarrel just," he reassured himself. It was a time of tight money, and outside banks were indifferent or worse. Finally, however, a New England financier sent a representative to Dayton to analyze conditions. He learned the cause of the trouble and he learned also that the Patterson brothers were men of unimpeachable character, of indefatigable industry, of indomitable will and that they were conducting a growing, profitable business. All this appealed to him and he offered to lend them several times the amount they had asked. Had the character of the Pattersons not withstood the searching test, the history of the National Cash Register Company might have ended disastrously.

Slidertown Spruces Up.

Mr. Patterson's activities on behalf of his employees multiplied. Slidertown began to blossom. Besides the boy club gardeners, grown-ups in the neighborhood became so greatly enamored of the beautiful that, under consistent encouragement, they began to spruce up their homes and to surround them with flowers and lawns.

Mr. Patterson also worked laboriously and against much discouragement to arouse the citizens of Dayton to make of it "The City Beautiful." He threw himself enthusiastically into reforming the administration of the city, then politics-ridden, not to say corrupted. Like most reformers, he made enemies.

Nor did he wholly escape the trouble with workers which other employers had predicted. During a period of acute labor unrest throughout the country, whisperings began to be heard that a section of the Cash Register workmen were to strike. Mr. Patterson's kindness had been misinterpreted as weakness. Some of the men wanted to become masters of the establishment. They imagined they could do as they pleased, that Mr. Patterson would submit to anything. He had made one mistake in the treatment of his workers; some of the privileges, such as taking baths and attending certain of the entertainments provided, were made compulsory. This form of paternalism, naturally, was resented. Mr. Patterson, however, saw his mistake and rectified it.

Closes Factory.

On learning that a strike was to be called by a part of the workmen, he assembled the whole force, explained that he understood some of them were dissatisfied, told them he himself was not wholly pleased with the way things were going and announced that a rest would probably do them and him good. He closed the whole works without intimating when they would be reopened and then went traveling.

At first the prospective strikers were jubilant over their "victory." Within a fortnight, however, other classes of employees began to criticise the malcontents. Another week passed, and still no intimation of re-opening. Inquiries began to be made as to when work would be resumed. No comforting information was forthcoming. At the end of a month things began to be made unpleasant for those responsible for the shut-down. Petitions began to be sent Mr. Patterson to come back and open the gates. But not until two months had passed did he announce that he would return to Dayton although he let it be known that he had been invited to locate his work at other more convenient points.

The whole city prepared to give Mr. Patterson a welcome home with brass bands, public receptions, complimentary dinners, and laudatory speeches. Sober reflection had convinced the citizens that Dayton could not afford to lose Patterson.

He would have none of their joyful reception. Instead he replied by outlining a long list of things Dayton citizens ought to do to make their city more attractive, more efficient and more healthy.

He re-opened the works and there was not another murmur of a strike, and since then he has had no trouble with labor. The true worth of his work for his employees and for Dayton was grasped during the period when there were fears that Dayton would lose both him and his plant, thus emptying thousands of pay envelopes weekly.

When the national mania for trust busting swept across the land the Government did not overlook the National Cash Register Company. Was it not rapidly becoming almost a monopoly? Patterson's reply to that was that he owned the basic patents for cash registers and that he was entitled to fight competitors both legally and commercially. Fight them he did without mercy. Into the rights or wrongs of the Government's prosecution I cannot here enter. A lower court sentenced a number of the officers and responsible employees of the company to a year's imprisonment, but this verdict was quashed by the higher court. The Government did not drop the matter, but started to prosecute the company under the civil section of the Sherman Law, and rather than continue at loggerheads with the Administration for another year or two, demoralizing the whole organization, Mr. Patterson was induced to plead guilty to the technical charge of "conspiring" to build up a monopoly, a business policy which Mr. Patterson had all along contended he was entitled to follow by reason of his exclusive patent rights.

Mr. Patterson declared to me that only the consciousness that he was doing constructive work and setting an example to other employers in the treatment of workmen impelled him to struggle on against both labor and governmental obstacles after he had all the money he needed for his personal and family requirements.

The Dayton Flood.

To the American public the crowning achievement of John H. Patterson was that which won him the title "The Saviour of Dayton," on that memorable day and night of March 25-26, 1913, when the greater part of the city was flood-swept and laid under as much as seventeen feet of water.

It was Patterson who, hours before the flood came, by telephone, by telegraph, by horseback, by automobile, by foot messenger, by every means of communication that could be impressed, aroused the whole city to its impending danger and gave instructions how to prepare for the coming avalanche of water. It was Patterson, too, who summoned his executive and other forces to Industrial Hall, mounted the stage, and showing his famous pyramidical chart illustrating the organization of the company, announced: "I declare the National Cash Register Company out of commission and I proclaim the Citizens' Relief Association." With a piece of charcoal he sketched a diagram of the Relief Association, naming a head for each division of the work and instructing them how to proceed.

From the Patterson factory came rafts and boats—constructed of materials taken from his immense lumber yards—**at the rate of one every seven minutes.**

Saves Many Lives.

By common assent Patterson became the acknowledged dictator of the whole rescue work. Never did military general direct forces with more skill, with more rapidity or to more effect. So brilliantly did he command that when General Wood, commander of the U. S. Army, and Secretary of War Garrison rushed to the scene and viewed the functioning of the Patterson emergency machine they announced: "We can do nothing beyond what you are doing."

A faint glimmer of what Dayton underwent may be derived from the fact that in one improvised maternity hospital twenty-nine children were born during that terrible night.

Purchases Made on Open Market

U.S. Shipping Board Does Away With System of Calling Bids—1,200 Ships With Total Tonnage of 7,500,000—Sailing Ships to be Requisitioned—Director of Steel Appointed.

THE United States Shipping Board has done away with the system of calling bids when placing its contracts for ship equipment and ship deck machinery.

Manufacturers who desire to compete for business should send their price schedules to F. H. Brown, purchasing agent, Emergency Fleet Corporation, Washington, D.C.

Vessels Under Construction

The Shipping Board now has under construction 1,200 ships, with a total tonnage of 7,500,000. There are 400 wooden and concrete ships building, with a total tonnage of 1,500,000 tons; 400 steel ships, with a tonnage of 3,000,000 tons; and 400 vessels taken over from private constructors with a total tonnage of 3,000,000. The Henry Ford automibile factory in Detroit has been turned over to the U. S. Government,

Changes in the Emergency Fleet Corporation have taken place with the entrance of Charles Piez, of Chicago, as vice-president. Admiral W. L. Capps, while still the general manager of the Fleet Corporation, has delegated the most of his power to Mr. Piez. From now on Admiral Capps will have supervision only over actual construction. Matters of policy and business will be controlled by Mr. Piez.

Requisitioning of Sailing Vessels

Possibility of the requisitioning of one million tons of sailing vessels now looms up. Thomas A. Edison, American inventor, has proposed a plan for the installation of engines in these craft, with twin screw propellers.

Navy Department Specifications

The Bureau of Supplies and Accounts of the Navy Department has asked for bids on the following articles:—Cocks, air; cocks, steam and water; cocks, stop; fittings, pipe bends; fittings, pipe unions; gauges for forced draft and forced lubrication; bronze automatic and non-automatic water gauges; pressure reducing valves; radiator and relief valves; brass steam and water valves. Manufacturers desiring to offer bids should write to the Bureau of Supplies and Accounts of the Navy Department, Washington, D.C., requesting schedules 1562, 1563, 1564, and 1565.

Eight of the principal express companies in the United States have petitioned the Interstate Commerce Commission for a flat increase of ten per cent. upon express between the United States and Canada.

During the past week 1,500 flat cars have been rushed to lines operating between the lumber districts and the shipyards.

Director of Steel Supply Appointed

J. L. Replogle, vice-president of the American Vanadium Co., has been appointed director of the steel supply for the Council of National Defense. All demands for steel will pass through the hands of Replogle, working with the War Industries Board. It is the plan of the

U.S. Firms Indifferent About Shells

Manufacture of shells seems to hold little attraction for the American manufacturer; but two firms offered bids on a recent war department contract for 336,000 five-inch projectiles, estimated to cost $4,000,000. Deliveries will be begun

(Continued on page 67.)

Canada Paint Convention

Held at Head Office, Montreal—Enthusiasm Displayed—Optimism the Keynote—Westerners Are Sales Winners.

THE Annual Convention of the Canada Paint Co. was held at the head office, Montreal, all divisional managers and representatives being present. The meeting was in session for four days, and it was indicated that the results accomplished during the past year were most gratifying.

R. Cluxton, the general manager, opened the convention, and greeted the managers and representatives, and acted as general chairman during the whole meeting. Enthusiasm was displayed by the whole staff, and the new plans for the coming year when submitted, met with hearty approval, and it is stated that the new selling plans should assist the dealers, and be real business producers.

Many new advertising features were submitted, and along with the general advertising campaign, will, it is believed, be the strongest this company has yet undertaken.

W. C. Boyd, a western representative won first honors in the sales prize of the company. He was closely followed by another western boy, R. S. Grant. The third place was taken by an easterner, F. L. Clarke. However, this competition was very close, and from the spirit prevailing, it was considered that the competition for the coming year will be the keenest in the history of this company.

The convention closed, as usual, with a rousing banquet, when a most enjoyable evening was spent by everybody.

Sales group of The Canada Paint Co. in attendance at the annual convention held at the head office of the company in Montreal recently.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

PRICE changes during the week have with few exceptions been in the upward direction and include advances in corrugated sheets, conductor pipe, eavetrough, valleys, bridge rolls, elbows, insulating sheathing, wood alcohol, pruners, bass stable brooms, canoes, fan belts, bicycle carbide. There was a slight readjustment downward in some gauges of black and galvanized sheets from the higher levels that have recently prevailed. This is more by way of a settling movement toward levels that had previously been established rather than showing additional weakness in the market. Dealers are of the opinion that the market for black and galvanized sheets will hold around present levels for some time at least. Wholesalers have been asked by manufacturers of ammunition to make up their minds as to the amount they will require for the coming year and to place their orders without delay. Manufacturers intimate that unless contracts are entered into now there will be no ammunition obtainable later on. Most of the manufacturers are busy on war orders and can work to capacity on this class of work without caring much about domestic needs. Wholesale bicycle accessory dealers are now engaged in revising prices for spring delivery. Business in hardware lines is reported good, with the movement of goods toward Northern points served by water now about finished.

MONTREAL MARKETS

MONTREAL, Nov. 21.—The jobbers here are quite pleased with the volume of business secured. With the holiday season not far distant, there is a very good movement of sleigh bells, skates, hockey sticks and other lines used in winter sports. The movement of cutlery is very good and some English cutlery is figuring prominently. Some dealers have had a good demand for heating stoves and ranges, and are prepared to go ahead with the manufacture of spring stock. Prices generally are very firm, and while there are very few changes, there seems little prospect of lower quotations in the near future. A great many of the river boats have already laid up for the winter and others will be taking winter quarters soon. Altogether, for this time of the year, conditions are reported satisfactory.

Demand For Shelf And Heavy Hardware Normal

Montreal.

SHELF AND HEAVY GOODS.—Jobbers here are receiving a satisfactory volume of orders from country points. It is now apparent that the retail trade is realizing the nearness of the holiday season and lines which will be in demand are moving out freely. Prices are firmly maintained on all shelf and heavy goods and there is no apparent reason to expect changes of a downward nature. Some heavy lines are now in smaller demand, such as pipe and fittings, as outside work is pretty well finished up for this fall.

Sorting Orders Are Fair For Standard Wire Nails

Montreal.

WIRE NAILS AND WIRE.—The business received for wire nails is small, there being a fair sorting demand only. It is presumed that stocks in the hands of retailers are fair, but at some points these must be getting low, as there are some towns and districts where a considerable amount of building has been going on. It is unlikely that in such cases, however, there will be any tendency to buy largely before the first of the year, at which time some activity is anticipated in connection with placing orders for spring delivery. The base price here for wire nails is $5.50 per keg, and for cut nails $5.75. Smooth steel wire is quoted at $6.50 base, per 100 lbs.

Demand For Iron Pipe Is Somewhat Quiet

Montreal.

IRON PIPE.—There has been a decreased demand for iron pipe with local jobbers owing to the approach of cold weather, when outdoor work of many kinds is halted. Pipe has moved very freely up to the present, and dealers here have been well satisfied with a good general sorting business. A few late shipments have been made, with prices firm and unchanged. These will be found elsewhere in current quotations.

Bar Iron And Steel Are In Limited Demand

Montreal.

IRON AND STEEL.—There is a firm tone to the iron and steel market with prices unchanged. Jobbers have had a good sorting business, but this is inclined to be of smaller volume and retailers are ordering in limited quantities. With the cold weather approaching, doubtless, there will be some increase, in the demand for certain kinds of mild steel, sleigh shoe steel and horseshoe iron. Prices being asked by the jobbers here are as follows:

MONTREAL—	
Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05
Sleigh shoe steel	5 05
Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0.17½-0 19
Black Diamond tool steel, per lb.	0 18-0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 18-0 19

Importers May Secure Some Supplies Tinned Iron

Montreal.

SHEETS AND PLATES.—There is still the uncertainty and the dissatisfaction regarding steel plates, tinned iron and all other sheets that has existed for some time. Once in a while the importers here see a slight ray of hope regarding some small deliveries and they are bending every effort to get supplies. One importer here is hopeful of securing a quantity of tinplates a little later, after the needs of the United States government have been satisfied for food containers, of which there seems still to be a great shortage. He states that there is some prospect of small tonnage being available for the Canadian trade. Another large importer hopes to secure delivery ere long of some tinned iron in the large sheets. Canada plate is very firm and an advance is recorded here of 50c per box, making the price $11.75.

MONTREAL—

BLACK SHEETS—	100 lbs.
10 gauge	$12 50
12 gauge	11 60
14 gauge	11 50
16 gauge	10 75
18-20 gauge	10 25
22-24 gauge	10 40
26 gauge	10 45
28 gauge	10 55
GALVANIZED SHEETS—	
10¾ oz	11 05
24 gauge	10 45
22 gauge	10 45
20 gauge	10 30
18 gauge	10 15

Demand Keeps Good For Stoves And Heaters

Montreal.

STOVES, HEATERS, ETC.—Manufacturers of stoves report a reasonably good business in these lines, their main complaint being that of scarcity of material. However, they have been able to take care of this fall's business nicely, which will be a source of satisfaction to themselves as well as to their customers. This weather has had a real effect on the oil heater trade, which has been brisk and has extended over a long period. The manufacturers of oil heaters state they have had ample supplies to meet the demand, and one big maker states further that he has ample supplies of material for the manufacture of his spring line of stoves and ranges.

Coal Oil Supply Good; Gasoline Holds Steady

Montreal.

GASOLINE, COAL OIL.—Gasoline is moving out very well still. Last week we stated that the demand was decreasing, and while it did, to some extent, the continued fine weather here permits of the use of automobiles, with little discomfort to the owner. Coal oil has been selling freely and the increase for this is noticeable. So many oil heaters are in use that a great deal of oil is consumed, while with the short days country dealers are selling increased amounts. Royalite is selling at 17c, Palacine at 20c and Electroline at 20c. Gasoline 32½c per gallon.

All Lines Hemp Scarce; Rope Is In Firm Market

Montreal.

ROPE AND CORDAGE.—There is a great deal of difficulty confronting manufacturers of rope owing to the shortage of the raw materials they require. It is practically impossible to secure any delivery of Russian hemp and the supplies of Italian hemp are also very scarce. It is likewise impossible just now to secure definite quotations from these manufacturers, and wholesale dealers here feel the situation keenly. The sorting business is very good for the season of the year, and occasionally a government order comes along which helps the volume of business. Prices as quoted elsewhere are firmly maintained, with no likelihood of lower prices.

Lead And Shaped Products Are Firm But Unchanged

Montreal.

LEAD PRODUCTS.—Little interest centres around the lead products market this week. There is some demand of a sorting nature. Here and there some plumbing contracts are being finished up before the cold weather, and the plumbers, having bought their needs for the most part, require odds and ends. Prices quoted herewith as follows:—

MONTREAL—

Lead pipe, lb.	$0.15
Lead waste pipe, lb.	0.16
Lead traps and bends	10% on list
Lead wool, lb.	0.15
Lead sheets, 3 lbs. sq. ft.	0.13¾
Lead sheets, 3½ lbs. sq. ft.	0.13¾
Lead sheets, 4 to 6 lbs. sq. ft.	0.14

Old Material Demand Weak; No Change

Montreal.

OLD MATERIALS.—It is stated that those who use old materials to any extent secured rather heavy supplies some weeks ago in favorable markets. This has occasioned a very dull and uninteresting market here, and there is, as has been the case for some little time, but very little movement. The U.S. government's set price of 23.50c per lb. on copper will hold old heavy copper at its present price of 22c. There have been no new prices quoted this week, but the tendency, dealers say, is to a weakening of the market. The following prices are being paid:

MONTREAL—

Tea lead	$ 0 04	....
Heavy lead pipe	0 05	....
Yellow brass	0 14	....
Red brass	0 20	0 21
Light brass	0 08	....
Scrap zinc	0 06	....
Heavy copper	0 22	....
Old cast iron, per gross ton	25 00	....
Wrought iron, No. 1, per gr. ton	22 00	23 00
Heavy melting steel	20 00	....
Pipe scrap	15 00	17 00
Stove plate, per ton	15 00	17 00
Old rubbers, boots and shoes	0 08	....
Overshoes, lumbermen's rubbers boots	0 06	....
Bicycle tires	0 03	....
Auto tires	0 05½	....

Tin Market Feverish; Lead Demand Limited

Montreal.

INGOT METALS.—Tin is still the centre of interest and its condition is very feverish with a firmer tone, and a little higher price quoted. The changes at London and New York are frequent and in some instances large.

COPPER.—With very little demand, copper remains unchanged at 34c per pound.

LEAD.—Lead trading is small, and orders are pretty scarce. The prices quoted here range from 9 to 9½c.

TIN.—Cabled advices regarding tin are rather obscure as to the future and the situation generally is feverish. Prices here are very firm at 75c to 76c.

SPELTER.—Spelter has been quiet and remains so. The demand is limited and the price remains at from 10½ to 11c per lb.

ANTIMONY.—Very little trading is being done. Prices quoted here are from 16 to 18c.

ALUMINUM.—The demand for aluminum is quiet and with no changes in price is selling at 58 to 60c.

TORONTO MARKETS

TORONTO, Nov. 22.—From all appearances the tendency in hardware commodities is still in the upward direction. While changes have not been quite as numerous as in some weeks past, there is sufficient number to give an indication that the trend is upward. Bicycle carbide, for use in acetylene lamps, has taken a sharp upward turn. Fan belt leathers have shown an advance. Canoes have advanced considerably. Booking is now being made on ammunition for delivery next spring, with the ultimatum sent out by manufacturers that only those orders that are placed in the near future can receive any consideration. Pruners and bass stable brooms are other lines that have shown increases. Goods to be shipped by water routes to northern points have practically all been sent forward. Any available stocks of cutlery are moving freely in anticipation of the Christmas trade.

Eavetrough And Conductor Pipe Up

Toronto.

EAVETROUGH, CONDUCTOR PIPE.—An advance of approximately 10 per cent. has been made effective during the week on the price of eavetrough, conductor pipe, bridge roll, valleys and elbows. Where the discount was formerly 10 per cent. off list, it is now quoted at net list. This follows as a result of the situation outlined in connection with sheets. While prices for these latter have been fixed in the United States, it is pointed out by local dealers that the price of the manufactured article had not advanced in conformity with the recent high levels in the United States. Now that it is apparent that it will be difficult to get further orders of sheets placed in the United States as the result of the activity of the mills on Government business, those stocks that are in this market have been enhanced in value. List prices remain unchanged, and will be found in current quotations.

Insulating Sheathing Makes An Advance

Toronto.

INSULATING SHEATHING.—Higher prices were made effective during the week on red rope sheathing to the extent of approximately 10c per 100 square feet. In rolls of one square the price is now

$1.35, as compared with the former price of $1.25. In rolls of two and one-half squares the price is now $3.30, the former price being $2.90. In rolls of five squares the new price is $6.25, whereas the former price was $5.60. While this paper is sometimes used as a building paper, it is more generally used for insulating purposes. There is a fairly brisk demand for building papers.

Sharp Advance In Carbide For Lamps

Toronto.

CARBIDE.—Manufacturers have announced a sharp advance in the price of calcium carbide, used in bicycle lamps and other acetylene lighting systems. Wholesalers of bicycle accessories have accordingly withdrawn their prices and are not quoting for future shipment. Any sales that are made are on the basis of price at date of shipment. With the advancing costs of raw materials for use in war purposes conditions in the manufacture of carbide have been affected. As stated above, wholesalers are not quotting prices except on the basis of date of shipment.

Fan Belts Have Advanced 10c Each

Toronto.

BELTS.—An advance has been recorded in the price of fan belts used on Ford cars amounting to 10c per belt. Those belts for 1912-16 models are now quoted at 45c each, the former price being 35c. For 1917-18 model the new price is 50c each. The foregoing belts are of the endless type. In the detachable type belt for models 1912-16 the price is 50c each, and for 1917-18 model cars 55c each. The standard Ford belt is quoted at 50c each.

Canoes Go Higher By 10 To 15 Per Cent.

Toronto.

CANOES, FISHING TACKLE.—One of the lines of sporting goods to show an advance during the week is that of canoes in which the increase amounts to 10 to 15 per cent. All makes of canoes are included in the advance. One of the lower-priced and popular selling canoes that formerly sold at $30 list to the retail trade has been advanced to $34 list. This price is subject to a discount of 20 per cent. There is a wide range in the price of canoes according to the fittings and styles manufactured by the various makers. Higher labor cost, together with advanced cost of raw materials, are the two main reasons assigned for the advance. Fishing tackle prices have not yet been announced by wholesalers, who are awaiting confirmation of orders placed with manufacturers before they start to book. As stated last week, prices will be from 20 to 30 per cent. higher than recent prices.

Booking Up For Next Year's Ammunition

Toronto.

AMMUNITION.—Wholesale dealers in ammunition are now engaged in booking up for their anticipated requirements on ammunition. Manufacturers have intimated that unless orders are placed well beforehand there can be no ammunition whatever obtainable. Orders are being taken on the basis of present prices, with specification that delivery can be had until June 1 of next year. Manufacturers are so situated that they can keep their plants running to capacity with Government orders, and they are in the position that they want to know how much domestic trade they will be required to handle. Wholesalers are placed in the position that they will have to anticipate their wants quite a distance ahead.

Pruners Advance Approximately 12½%

Toronto.

PRUNERS.—Spring booking prices have been announced on Rockdale pruners, which prices are approximately 12½ per cent. higher than the prices prevailing for booking business of last fall on these lines. No. 35 is now quoted at $14 per dozen and No. 38 at $11.75 per dozen. It is needless to state that the high price of steel has affected the prices of this article in an upward direction. Labor cost is also another factor that has contributed toward the firm situation in pruners.

Bass Stable Brooms Higher By 10 Per Cent.

Toronto.

STABLE BROOMS.—An increase of 10 per cent. has been made effective in the price of bass stable brooms. No. 49 by 12-inch has been advanced to $6.85 per dozen; No. 49 by 14-inch has been advanced to $8.75, while No. 49 by 16-inch is now quoted at $11.35. Difficulty is being experienced in getting sufficient supplies of bass, and prices have accordingly been high for the raw material. The situation in stable brooms is somewhat similar to that for house brooms, in which recent advances have been recorded, with the intimation that the quality of broom corn obtainable is very poor.

Spring Booking Prices On Cordage Not Out Yet

Toronto.

CORDAGE, TWINE.—A somewhat unusual condition prevails in the market for cordage at the present time, due to the uncertainties of the market. Wholesalers at this season of the year usually announce prices at which they will book for delivery during the following spring. Up to the present these prices have not been announced, as manufacturers prefer not to obligate themselves in the face of very uncertain conditions. There has been some little booking on no-price basis; in other words, prices to be governed at time of shipment. Sorting business in rope is quiet at present, but small twines are moving freely. Pure Manila rope is quoted at 39c per pound base, British Manila at 33c base, New Zealand hemp rope at 33c base, and sisal rope at 27½c per pound base.

Firm Prices Prevail On Refined Petroleum

Toronto.

COAL OIL, GASOLINE.—A firm situation exists in the market for coal oil, due to the heavy consumption that is now taking place. In the Chicago and Omaha districts an advance of 1c per gallon has been recorded during the week in the price of refined petroleum, and the increase is attributed to the heavy demand. With a shortage of coal, people have been burning more coal oil for heating purposes. Gasoline consumption is not quite as heavy as during the summer months, although consumption is still fairly well maintained, and indicates that people are running their cars later into the year than usual. Gasoline is quoted at 31½c per gallon and benzine at 30½c. Prices on coal oil will be found in current quotations.

Furnace Demand Is Being Maintained

Toronto.

STOVES, FURNACES, ENAMELWARE.—Manufacturers of furnaces report an excellent demand for furnaces at present, as this is the season of the year when installations are perhaps the heaviest. This is due to the fact that buildings that have been in the course of erection have advanced to the stage where they can be completed with the heating systems. Some manufacturers state the supply to meet the demand is very light, as stocks have dwindled rapidly in the face of the present season's demands. One manufacturer of gas ranges has advanced the price 5 per cent. There is a good demand on enamelware at present, especially from the country districts. Prices in these various commodities held unchanged during the week.

Wire Nails And Wire Products Firm

Toronto.

NAILS, WIRE.—There is a continuation of the firm position in wire nails and wire products, and prices were steadily maintained for the most part at $5.45 base on standard steel wire nails. There is no indication that wire rods for domestic consumption will be materially lower, and this is tending to keep prices steady on nails and wire products. Demand for nails continues light, there being demand only for small lots. Base prices on wire remain unchanged at $6.50 for gauges Nos. 0 to 9 on smooth steel.

Steel And Iron Continue In Strong Tone

Toronto.

IRON AND STEEL.—There is no improvement to be noted in the situation so far as private consumers are con-

cerned. The mills in the United States are more and more directing their energies toward supplying the needs of the Government and the Allies, and the private consumers can only get what is left. This is a very small amount at present. In view of this situation it will be seen that available stocks of iron and steel in the hands of wholesalers and jobbers are firmly held. Some of the better grades of mining tool steel have been advanced during the week, the range of prices now being from 19c to 30c per pound, as compared with 19c to 26c per pound formerly. Demand for iron and steel on domestic account has been fairly good.

Further Readjustments In Sheet Prices Take Place

Toronto.

SHEETS, PLATES.—A further readjustment in the price of black sheets has taken place during the week on the part of some concerns who were quoting at prices above the lowest quotations. On 3/16-inch plate there has been a readjustment in the downward direction to the extent of $1 per 100 pounds, making the quotation $12.25, while ¼-inch boiler plate has also been moved lower to $12 per 100 pounds. There was a slight sag in the price of galvanized sheets in one quarter, the decline amounting to 25c per 100 pounds. For 10¾ oz. the price is now $10 in certain quarters; $9.70 on 28 gauge, $9.40 on 26 gauge, $9.25 on gauges 22 to 24, $9.10 on gauges 18 to 20, $8.95 on 16 gauge, and $8.85 on No. 14 gauge. Quotations in other quarters held unchanged from those given last week.

Corrugated Sheets Have Moved Higher

Toronto.

CORRUGATED SHEETS.—As intimated in these columns last week that an advance on corrugated sheets was highly probable, such advance has been recorded and amounts to 30c on No. 28 gauge and 40c on No. 26 gauge. This comes as a result of the fixing of the prices in the United States with the realization on the part of dealers that there will be very little additional stock of plain sheets available for the Canadian markets. The price of No. 28 gauge is now quoted at $9 and No. 26 gauge at $10, with the range as high as $9.20 on the former. There is a better inquiry for corrugated sheets.

Stock Of Boiler Tubes Continues To Dwindle

Toronto.

BOILER TUBES.—The stock of boiler tubes continues to dwindle in view of the restriction on imports and the tight rein held over the situation by the Canadian Government. Only those tubes can be sold for domestic consumption on which a permit is secured from the Government. This stand has been taken in order to conserve stocks, as the United States Government will only let supplies go out of the country which it can be shown are purely to further the military activities of the Allies. Prices in the local market held unchanged.

Lead Sheets Make Decline of 1½c To 2½c

Toronto.

LEAD AND ZINC PRODUCTS.—A further decline in lead sheets was recorded during the week to the extent of 1½c per pound on gauges that run 3 and 3½ lbs. to the square foot and 2½c decline on gauges from 4 to 8 pounds per square foot. The price of the former gauges is now 13¼c per pound and 12½c per pound on sheets having from 4 to 8 pounds per square foot. This decline comes by way of settling to the level warranted by the conditions in the primary pig lead market. Other lead and zinc products held unchanged during the week, with a fairly good demand reported.

Market For Old Materials Reported Dull

Toronto.

OLD MATERIALS.—There is a dullness in the market for old materials as a result of the lack of interest on the part of consuming mills. Wholesalers are accordingly not anxious to take on much new business, although there is buying when conditions of purchase seem to indicate a reasonable chance of gain. Quotations held unchanged from those of last week.

Tin Situation Shows No Improvement

Toronto.

INGOT METALS.—Tin continues to be the item of great interest in the ingot metal market. There is no relief in sight as yet so far as getting additional stocks for this continent are concerned. Other metals held steady during the week, both in primary and local markets.

COPPER.—The copper situation holds pretty much in the status prevailing for several weeks past. In the primary market in the United States the Government has established the price for its purchases at 23.50c per pound, and has intimated that purchases for the domestic consumers should not be made above that figure until some decision is reached at Washington. This has placed the trade so far as obtaining supplies for domestic manufacture are concerned pretty much at a deadlock. In the local market quotations for casting copper was higher by ½c per pound in certain quarters, the price ranging from 32c to 32½c. Electrolytic was also quoted at 32½c.

TIN.—The British Government has not yet released supplies of tin being held there for shipment to Canada and the United States, and the situation on this continent continues to be one of dwindling stocks, with high and firm prices prevailing on account of the scarcity. Intimation is made that some arrangement may be made with the British Government looking to the granting of license to ship. Prices ranged higher in the local market from 72c to 78c per pound.

SPELTER.—Curtailment of output of spelter is under way in the United States, as advices were received during the first part of the week that the largest smelting plant in the United States has curtailed operations to the extent of two-

thirds of its capacity. The market is in a quiet condition. Should curtailment of production continue, the market sooner or later is bound to take on a firm tone. Locally quotations held at 10c per pound.

LEAD.—A quiet tone prevails in the market for lead. There were freer offerings in the primary market for both prompt and future delivery, but prices held steady in that quarter during the week. Locally quotations were unchanged at 9c per pound.

ANTIMONY.—There is dullness in the market for antimony, and prices held unchanged at 16c to 18c per pound in the local market.

ALUMINUM.—Quotations held unchanged at 60c per pound in the local market. There is very little ingot aluminum obtainable for domestic use, as the Government is keeping strict surveillance over importations to the end that sufficient supplies of sheets may be obtainable for aeroplane manufacture.

PIG IRON.—Some supplies of Hamilton pig iron will soon be obtainable, as the smelters there have recently taken one of their steel smelting furnaces for use in smelting pig iron. Price of pig iron holds at the recent decline, $50 now being asked for foundry iron. The coke situation is becoming more serious on account of the congestion on the railways.

LONDON MARKETS

LONDON, Nov. 20.—Advances have been recorded in a number of hardware lines during the week, including such commodities as corn shellers, food choppers, steel jack chain, wire lawn rakes, axle grease, cup grease, corn house brooms. There is a firm situation in the hardware market in general. Business in this district has been fair during the week. Continued mild open weather is delaying sale of some winter lines. Pocket cutlery and English razors are very scarce for the Christmas trade. Many lines are hard to obtain. Collections continue to be good.

Corn Shellers And Food Choppers Higher

London.

CORN SHELLERS, FOOD CHOPPERS.—Advances were made effective on corn shellers and food choppers during the week. Little Giant corn sheller is now quoted at $13.50 per dozen and Black Hawk at $22.50 per dozen. New prices on Universal food choppers make the following now effective: No. 0, $13.55 per dozen; No. 1, $16.80 per dozen; No. 2, $20.75 per dozen, and No. 3, $28 per dozen.

Steel Jack Chain And Wire Lawn Rakes Advance

London.

CHAIN, RAKES.—An advance of 10 per cent. has been made effective on steel jack chain. Where sales were formerly made net list the price has been increased to list plus ten per cent. Wire lawn rakes have also been moved to higher levels. The new price on 24-tooth size is now $6.25 per dozen. Steel and wire products continue to be in firm market because of the scarcity of supplies for domestic manufacturing trade.

Prices Announced On Some Accessory Lines

London.

AUTO ACCESSORIES.—List and discounts have been announced on Corning conaphores for auto headlights. Discounts from list prices have been fixed at 25 per cent. Following are list prices on clear: 8-inch, $3.60 per pair; 8¼-inch, $3.60 per pair; 8½-inch, $3.60 per pair. List prices on Novial are: 8-inch, 8¼-inch and 8½-inch, $5 per pair; 8¾-inch, $6.25 per pair.

Axle Grease And Cup Grease Go Higher

London.

AXLE GREASE, CUP GREASE.—An increase in the price of mica axle grease was recorded during the week which now makes the following prices effective: 1-lb. tins, four dozen to case, $15.90 per gross; 3-lb. tins, one dozen to case, $3.45 per dozen; 3-lb. tins, two dozen to case, $3.35 per dozen. New prices on Arctic cup grease are as follows: 1-lb., case of 36, $5.90 per case; less than case lot, 18c per pound. 1-lb., case of 24, $4.10 per case; less than case lot, 18c per pound. 5-lb., case of six, $5.15 per case; less than case lot, 17½c per pound. 10-lb., case of six, $9.15 per case; less than case lot, 15½c per pound. 25-lb. pails, 14½c per pound. 50-lb. pails, 13c per pound.

Corn House Brooms Up; Lanterns Hold Steady

London.

BROOMS, LANTERNS. — Advances have again been recorded in the price of corn house brooms which now make the price of cheapest line $7 per dozen. Lanterns, both long and short pattern, are quoted at $12 per dozen. Lantern globes are also holding steady in price at the following prices: cases of six dozen to case, 85c per dozen, cases of three dozen to case, 90c per dozen; one dozen to case, $1 per dozen.

Good Sale Ash Sifters; Hockey Sticks Moving

London.

SIFTERS, HOCKEY STICKS. — Now that furnaces have been in operation for some time and there is no apparent chance of lower prices in coal people are giving evidence that they are conserving their coal supplies as best they can by the use of ash sifters. There is a good sale of these commodities at the present time. Common wood sides are quoted at $2.15 per dozen, Banner at $2.90 each, and No. 1 Rocker at $5.25 each. Hockey sticks are being quoted to the trade at the following prices: Boys' red, 85c dozen; boys' white, 85c dozen; Practice rock elm, $2 dozen; Spalding, $3.75 dozen; MicMac, $4.75 dozen. Starr skates are being quoted at 30 per cent. off list.

Oil Heaters And Weather Strip Going Well

London.

OIL HEATERS, WEATHER STRIP. —With the desire on the part of consumers to economize on coal bills there has developed a good sale for oil heaters. No. 525 is now being quoted at list price of $5.50 each and No. 530 at $6.25 each, with discount from these prices of 25 per cent. Weather strip is also in good demand as a cold weather requisite. Wood and felt is quoted at a discount of 75 per cent. off list, Swan hardwood at 75c per set, and Frost King at $4.40 per dozen packages.

Building Paper In Fair Demand

London.

BUILDING PAPER.—There is a fair demand for building and prices hold unchanged at the following quotations: Plain fibre, D2, 59c per roll; tarred fibre, E2, 70c per roll; tarred felt, $3.35 per 100 pounds; carpet felt, $4.50 per 100 lbs.; asbestos paper, $12 per hundred pounds.

Freezeproof in Demand

There is a good demand for freezeproof for automobile at the present time. Johnson brand in 5-lb. packages is being quoted at $1.30 per package.

Snow Shovels and Sleighs Unchanged

Prices on snow shovels hold unchanged at 12½ per cent. off list, while hand sleighs are quoted at 35 per cent. off list.

Good Sale on Mops and Polish

There is a good sale on mops and polish at the present time. O'Cedar mops are quoted as follows: No. 1, round, $12 per dozen; No. 3, triangle, $12 per dozen. O'Cedar polish continues to be quoted as follows: 4-oz. bottles, $2 per dozen; 12-oz. bottles, $4 per dozen; one-quart tins, $10 per dozen; half-gallon tins, $16 per dozen; one-gallon tins, $24 per dozen.

Rope And Glass Hold Unchanged

London.

ROPE, GLASS.—The market for rope is holding steady and prices are unchanged at 39c per pound base on pure manila, 33c per pound on British manila and New Zealand hemp ropes and 27½c per pound base on sisal rope. Glass is in firm market, but prices quoted are still on the basis of 50 per cent. off list on single and double diamond and 40 per cent. off list on cut lights.

Putty Holds Unchanged

Conditions in the putty market held steady during the week, standard putty in

25-lb., 50-lb., and 100-lb. drums being quoted at $4.65 per hundred pounds with pure putty in same size containers at $5.65 per hundred pounds.

Nail Demand Light

There is only a fair demand for nails at the present time and prices hold unchanged at $5.45 per hundred pounds base for standard steel wire nails and $5.75 base for cut nails.

White Lead in Oil Steady

There is no indication of any movement in the market for white lead in oil, quotations being made on the basis of $16.20 per hundred pounds in ton lots and $16.55 in less than ton lots. Elephant pure is quoted at $16.80 per 100 lbs. in ton lots and $17.15 in less than ton lots.

Linseed Oil And Turpentine Hold Steady

London.

LINSEED, TURPENTINE. — The market for linseed oil and turpentine held unchanged at quotations of last week. Linseed oil in 1 to 2 barrels is quoted at $1.50 for raw and $1.53 per gallon for boiled. In 3 to 5 barrel lots the price is $1.49 for raw and $1.52 for boiled. In 6 to 9 barrel lots the price is $1.47 per gallon for raw and $1.50 for boiled. Turpentine in single barrel lots was quoted at 75c per gallon and in 2 to 4 barrel lots at 74c per gallon. In 5-gallon lots the price is 82c per gallon.

WINNIPEG MARKETS

WINNIPEG, Nov. 20.—Winnipeg markets for the week are again very quiet, showing but two advances, namely, in burlap and linseed oil. All other lines remain steady. Sorting business in all lines of shelf goods is favorable, with good demand for all lines of cutlery, silverware, watches, etc.

Many hardware dealers in this part of the Dominion have taken on their share of the nation's business for the remainder of month and are devoting much of their time to the selling of Victory bonds. All classes are responding nobly and with Canada's billion-dollar crop it is expected that the loan asked for of 150 million will be at least doubled.

Wire Nails And Staples In Fair Demand

Winnipeg.

NAILS, STAPLES. — Wire nails and staples continue in fair demand with prices remaining stationary as formerly quoted, namely, wire nails, $5.60 base, f.o.b. Ft. William; $6 base, f.o.b. Winnipeg. Cut nails $6 base, f.o.b. Winnipeg. Staples, bright wire, $5.85 Fort William; $6.25, f.o.b. Winnipeg. Galvanized, $6.65 f.o.b. Fort William; $7.05 f.o.b. Winnipeg.

Bolt Prices Firm; Booking For Spring

Winnipeg.

BOLTS.—Prices on bolts of all kinds still remain firm, and the demand continues good with stocks well sorted. Orders are now being accepted by Winnipeg jobbers on this line for shipment up to April 1st, 1918, at prices given herewith:—

Carriage Bolts—¾ in. and smaller, 5% off list; 7-16 in. and larger, 5% on list. Machine Bolts ¾ in. and smaller, 5% off list; 7-16 in. and larger, 5% on list. Plow Bolts—All sizes, 5% on list. Stove Bolts—50% off list. Shaft Bolts 5% on list. Tire Bolts—25% off list. Sleigh Shoe Bolts—¾ and smaller, 5% on list; 7-16 in. and larger, 5% on list.

Booking Prices On Screws For Spring

Winnipeg.

SCREWS.—Prices on all lines of wood screws continue firm and show no indication of an immediate advance. Bookings on screws are now being taken for 1918 spring delivery at prices quoted below: Flat head bright screws, 65% off list; round head bright screws, 60% off list; flat head brass screws, 30% off list; round head brass screws, 25% off list.

Linseed Oil Advances; Turpentine Holds Steady

Winnipeg.

LINSEED OIL, TURPENTINE. — Prices on turpentine still remain firm on the Winnipeg market and show no change over former prices, which are as follows: Barrel lots, 80c gal.; half-barrel lots, 83c gal.; 5-gal. lots, 85c. gal.; 1-gal. lots, 85c. gal., plus the usual extras for containers.

Prices on flaxseed during the past week have shown unusual activity, necessitating an advance on linseed oil of 8c per gal., making to-day's market price as follows: Raw, $1.65 gal.; boiled, $1.68 gal.

Readjustments In Price Of Wood Alcohol

Winnipeg.

WOOD ALCOHOL. — Adjustments in prices have been announced on wood alcohol showing an advance of 5c per gal. on barrels and half barrels and a reduction of 5c per gal. in small quantities. Market prices are quoted herewith: Barrels, $1.65 gal.; half barrels, $1.70 gal.; small quantities, $1.75 gal., plus the usual extras for containers.

Advance of 10% In Knife Handle Wrenches

Winnipeg.

WRENCHES. — Prices on Perfect Handle knife handle wrenches show a further advance of 10% and are quoted to-day at prices given below: 6 in, $11 doz.; 8 in., $13.20 doz.; 10 in., $15.40 doz.; 12 in., $19.80 doz.; 15 in., $26.40 doz.; 18 in., $35.20 doz.

Burlap Prices Go Up 1c Per Yard

Winnipeg.

BURLAP.—Burlap prices, which have shown numerous advances during the past two years, again move up 1c per square yard on drab, while prices on dyed remain firm, with stocks in general broken. Prices to-day are as follows: Drab burlap, 29c sq. yard; dyed burlap, 35c and up according to quality desired.

Shortage In Plates Is Highly Probable

Winnipeg.

PLATES. — Canada plates and tin plates which have been very scarce during the past year promise to show an acute shortage during 1918 as many mills will be requisitioned for war purposes which will materially reduce the supply. Prices to-day show no change and are quoted below.

Canada Plates—18 x 21, half polished, $12 box; full polished, $13 box; 18 x 24, half polished, $12 box; full polished, $13 box; 20 x 28, half polished, $12 box; 20 x 28, full polished, $13 box.

Tin Plates—20 x 28 I.C., $30 box; 20 x 28 I.X., $32 box; 20 x 33 I.C., $35.40 box; 20 x 33 I.X., $37.45 box.

Glass Market Gives Evidence Of Strength

Winnipeg.

GLASS.—The markets on window glass have been showing great strength of late as the United States fuel controller promises to limit the supply of coke and gas formerly supplied to factories to about two-thirds of their demands. This, combined with labor difficulties, will no doubt affect the market. Prices in the meantime remain firm and bookings are being accepted at present prices, which are as follows:—

	Per 100 Sq. Ft. Single	Double
Up to 25 in.	$ 9 50	$13 75
26 to 40 in.	10 50	15 75
41 to 50 in.	13 50	17 75
51 to 60 in.	14 00	18 50
61 to 70 in.	15 00	20 00

Bucksaws Reported In Good Demand

Winnipeg.

SAWS.—Bucksaws continue to be in good demand as is usual at this season of the year and stocks are reported to be equal to the demand. Prices are quoted herewith: Happy, medium, $9 doz.; Watch Spring, $9.40 doz.; Lance Tooth or Lightning Blades, $10 doz.

PITTSBURG MARKETS

PITTSBURGH, Pa., Nov. 19.—Details as to how much shell steel tonnage has been allotted against Government's program of placing 1,500,000 tons are not available, but it is thought that more than half the tonnage has been definitely placed. It is evident that in a short time the United States will be producing considerably more shell steel than ever before, as orders are being

placed in Canada, and the United States is being canvassed to find additional plants that can be utilized for shell manufacture, while at the same time exports of shell steel are being continued at substantially the rate of 1916. September exports, just reported, show 148,932 gross tons of billets, blooms, ingots, etc., and 47,577 tons of steel bars, the bulk of the tonnage in each case being doubtless shell steel. The total iron and steel exports in September were 489,415 tons, exports for the nine months being 4,525,971 tons.

Export Prices

There has been some divergence of opinion as to what prices would rule in the case of iron and steel exported under the general principle known as "one price for all." That has customarily been stated as being one price for the Government, its Allies, and the public. Some held that this meant all sales, others contending "the public" meant only the public of the United States. There was a further question, also, as to sales to "The Allies," as that might mean the governments of the allied countries, or the countries themselves.

Gradually the situation has been clearing until now the common understanding is that the one price must apply to steel that is destined directly or indirectly for the war, while purely commercial steel, such as would be exported to South America, can be sold at any price. The real power in the matter is the bureau that grants export licenses. The understanding of those closest to the bureau is that Washington is going to be very strict in the direction that steel intended, even quite indirectly, for war use must go at not above the set prices.

Institute Announces Prices

The American Iron and Steel Institute has this week published a long statement pertaining to prices, extras, differentials, etc. This is in conformity with the arrangement between it and the War Industries Board, whereby the latter has set basis prices for various commodities and looks to the trade to develop prices in detail that will conform with the basis prices. The Institute committees work with the manufacturers in the various lines, but it does not follow that every price or regulation the Institute promulgates has the full sanction of the great majority of the manufacturers involved. The Institute is under the necessity of eventually satisfying the War Industries Board that the prices and regulations are all in keeping.

Some of the prices announced by the Institute are:—Forging billets, base, $60 per gross ton; lapweld steel boiler tubes, basing discount, 34 per cent. off list; iron, 12½ per cent. off list, both on carload lots, 3½ to 4½-inch; rivets, 4.65c, base; iron bars, 3.50c, at mill; wire nails, $3.50 per keg.

It is prescribed for jobbers that they add to the mill price plus freight to warehouse a margin not greater than 1.00c for bars, shapes, plates and blue annealed sheets 16 gauge and under, and not more than 1.25c on black sheets, 18 gauge and lighter, and all galvanized sheets, while on shafting the margin is 25 points, equal to 1.25c on base sizes, the producers' discount being 17 per cent. off list.

Sheets Active

The sheet market has been rather active since the Government prices were announced November 5, 4.25c on blue annealed, 10 gauge; 5.00c on black sheets, 28 gauge; and 6.25c on galvanized, 28 gauge. Some of the mills had practically run out of orders, or at least enough to keep them fully engaged, while on the other hand consumers had been delaying purchases awaiting the Government prices. There has been a very fair tonnage done for the remainder of this year, with some deliveries running into January. Without formal opening of books, the American Sheet & Tin Plate Co. is now allotting first half tonnage in blue annealed and black sheets to regular customers, and first quarter tonnage in galvanized sheets. It does not appear, however, that sales are being made to jobbers at this time.

Tin plate for next year is also being booked, though this is hardly ordinary commercial activity, the distribution of the tin plate being so much under Government supervision. About 500,000 boxes are being allotted for export to Allied countries, all of this being tin plate calculated to help prosecute the war.

Generally speaking, the iron and steel markets are quiet, producers usually being well sold up and being indisposed to take on new business. Regular customers, it is constantly asserted, are being taken care of as well as possible.

Coke Supplies Inadequate

The Fuel Administration is paying more attention to the coke situation, but thus far without any material results developing. An order has been issued to ship furnace coke in preference to foundry, as the blast furnaces, insufficiently supplied for many months, are having a harder time than ever, but the tonnage of foundry coke is so small that its replacement by furnace coke cannot help a great deal, and of course foundries will have a still harder time. The chief trouble at present is with the railroads, which have furnished a poorer car supply the past week than for weeks past, the congestion at yards and sidings having grown worse.

More Ship Plates

In the past week or two the Illinois Steel Co. has put in operation the new 90-inch plate mill at the South Works, while the 160-inch plate mill at the Gary plant has just been put in operation. These two new plate mills follow the "Liberty Mill," 110-inch, built by the Carnegie Steel Co. at the Homestead works and put in operation last month. The three mills can produce, if it is possible to operate them at capacity, about 450,000 tons of ship plates a year, against not over 1,800,000 tons of plates of ship character produced in 1916. Some other plate capacity has been completed since the first of the year, and more is coming, and it is possible that in a few months the production of ship plates will be at a rate double the average rate of last year.

PURCHASES MADE ON OPEN MARKET

(Continued from page 60.)

in May next at the rate of 1,000 a day.

Judge Robert Lovett of the War Industries Board has given notice that a new ruling on priority orders will be issued shortly which may curtail non-essential industries. The priority order will virtually cut off transportation facilities from non-essential factories.

Henry Ford has been added to the organization of the Shipping Board in an advisory capacity.

VICTORY LOAN JUSTIFIES DEMOCRACY

(Continued from page 52.)

Answering a query as to what style of bond he would advise for a small investment, Mr. Noxon answered that a $50 bond would not have as good a market value for a long term as would the larger bond.

Mr. Noxon pointed out that the banks would not guarantee bonds against fire, but that nevertheless, a good practice was to deposit the bond and get a receipt for it. The coupons are then put to the credit of the savings account of the owner as they come due.

"The highest compliment you can pay to the country is to buy a bond" said Mr. Noxon in conclusion.

THE SITUATION IN TIN PLATE

A meeting was held early in the week in the office of the Minister of Trade and Commerce, Ottawa, regarding supplies of tin plate in Canada. Thirteen representatives of the users of tin plate were present, and of these, three, consisting of Mr. Anderson of the American Can Company, Mr. Whittall of the A. R. Whittall Can Company and Mr. Corrigan of the McDonald Manufacturing Company, were appointed to go with Mr. O'Hara, the Deputy Minister, to Washington, and ascertain the information required by the American authorities regarding the uses and quantities of tin plate imported into Canada.

These gentlemen will return and call another meeting of the users, when a further committee will be appointed to deal with the matter.

Mr. Chase, representing the Chase Steel Wool Co. of Leominster, Mass., is calling on the trade here in the interests of his firm.

WEEKLY PAINT DEPARTMENT

Twelvemonth Sale of Paint

Aggressive Paint Dealers Have no "Off-season"—Window Displays for Specialty Lines in Xmas Holiday Season—Give Customer all the Information He Wants and All-year Paint Sales Will Result.

THE real job facing the aggressive dealer in paints is to push the sale of paints twelve months in the year. The season approaching is one in which interior finishes are the chief requirement, but the general idea of painting should never be let-up. Floor, wall and furniture finishes are the chief requirements in the cold weather and these should receive special attention in the way of advertising and window display. The Christmas goods season will soon be here, and effective arrangements of paints can be placed in the window to good advantage.

The depreciation of values where painting is neglected should be made one of the outstanding arguments in influencing all classes of trade to preserve their buildings with paint. It is a patriotic duty as a means of conservation as well as an investment which will pay them good returns for their money. This argument of conservation may apply in particular to farmers who are perhaps the most negligent as a class in this regard, and who stand to lose the most by failure to apply paint when it is required.

The average individual must confess entire ignorance as to what attitude of mind a man must possess who spends good money to build himself a house or a barn and then leaves it unprotected from the elements. Nor is it understand why any man who sees his property depreciating through the wearing away of a coat of paint does not seek to retard the work of weathering through the application of another coat or two. In some instances the will to do is present, no doubt, but the wherewithal to put the will into action may be lacking. It is true that the cost of paint is increasing; but so is the cost of lumber. Of course, almost any man would rather have an unpainted house or barn than no house or barn at all. But in too many instances it is not lack of funds to commence or finish a piece of work or even to keep it in good repair so much as it is an "elbow relationship" to Farmer Weary who never concealed the fact that it was impossible for him to look at a wood pile without experiencing a 'hesitatin' feelin'."

Lack of Paint Displays Lack of Thrift

In most cases, if the truth were known, a lack of paint indicates a lack of thrift, and this condition is usually found where the owner is living on the place. Paint is a blessing both to the building to which it is applied and to the person who pays the bill for the application. It stands between the raw boards of freshly-built structures and the elements just like a man's shirt stands between him and the heat or the cold. The skin pays tribute to the elements in any season. So does wood and timber when unprotected by its natural covering—the bark—or by the artificial covering which paint represents. However smooth a piece of wood may appear to the eye it will show itself rough indeed under a microscope. When viewed thus it is easily evident why moisture rots it and the sun cracks it. Wind, rain and sun only need a chance at any wooden surface to extract their toll. Paint fills up the minute cracks and crevices, keeps out the water, retards decay and lends length of years. But it does more than this. It demonstrates that whoever is responsible for its use is possessed of thrift. And if it be on the farm it is a pretty good indication that a good farmer and not an indifferent one is the owner.

Paint Sales All the Year Round

It is up to each individual dealer to do the thinking for the whole community as regards paint, and to do it every day in the year. There should be no off-seasons. From January 1 to December 31 there is an opportunity for sales in some paint and varnish product for the dealer who is looking for it.

In this connection the experiences of dealers in one town, in keeping up paint sales during a winter season following an exceptionally good summer trade, are of particular interest. The coming of cold weather was unheeded as a signal to relegate the paint department to the cellar, as had been the practice, and instead the ice and snow was the signal to play the paint even more to the front. The paint shelves were kept filled with a complete stock.

The result is that one dealer finds farmers' wives are buying more paint and varnish each year. Another dealer finds an increasing tendency among women to buy paint during the winter months. Still another dealer now sells a lot of barn paint and buggy finishing materials. Window displays boosted floor paint sales, and the idea of touching up various things with paint during the winter months rapidly spread from one housekeeper to another until now those dealers have established an all-year trade in paint.

Customer Fools No One But Himself By Not Painting

As outlined above, one of the big elements in maintaining paint sales in the winter months is to show the consumer that in neglecting to paint when paint is necessary he is fooling no one but himself. This is undoubtedly false economy, and in combating the stand taken by such customers the slogan, "a coat in time saves nine," might be used to good effect.

Now is the time to push the profitable specialties, and it is just as important to sell these specialties on performance and not price as it is mixed paint or anything else. At the present cost of furniture, implements, etc., it is far cheaper in the long run to protect them with paint and varnish than to let them deteriorate. That has always been true, but sometimes in the past folks have bought paint and varnish for ornamentation.

Specialty lines are easy to push and they pave the way for bigger paint sales later by establishing an acquaintance. These specialties usually come in attractive packages with a liberal supply of advertising matter and samples, etc. One advantage of pushing specialties is that they are always in season. The dealer should take advantage of the opportunity to push these lines for when the customer buys furniture stain or other specialty lines the chances are you will secure his order for paint when the season comes for house or barn painting.

Give the Customer the Information Wanted

One of the most common mistakes made by dealers is in making themselves think that the customer knows all about the paint and varnish specialties. The customer does not know and that is the reason why the dealer should know all about them—what they will do and how to use them.

Does everybody know that you have an enamel for stove pipes, grates, gas ranges and other metal surfaces that

The Psychology of the Counter Display

A counter display of Moore's House Colors gets home its arguments at the most advantageous moment — when the prospective paint buyer actually has his hand in his money pocket, and is prepared to make a purchase. There are plenty of householders coming into your store each day who are intending to paint, but keep putting it off or forgetting. An attractive counter display is just the reminder needed to turn these prospects into buyers.

That suggestive arrangement on your counter is a memory-jogger that they can't ignore. You'll get many a sale of Moore's House Colors through a counter display. Try one to-day.

Benjamin Moore & Company, Limited, West Toronto

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Nov. 21.—Paint markets here have a very firm tone, and in all lines jobbers are inclined to feel that prices will be maintained, with a higher tendency for oil and a firming of price for turpentine the features. There is a decidedly firm tone to the crushers' market, and on their part there is no desire to commit themselves definitely as to future deliveries. This is because of the continued tie-up of transportation facilities, which they have little hope of seeing improved in the near future, and as a consequence there will be every likelihood of the present prices being maintained, if not increased. Mixed paint orders are coming to hand in a small sorting way, while the orders sent in by travellers for spring delivery are increasing, and the bookings compare favorably with those received heretofore at this time. Putty is still moving very well, while the amount of business all round is fairly good.

Linseed Oil Holds Firm; Shipping Situation a Factor

Montreal.

LINSEED OIL.—There is a very firm tone to the markets here, with most jobbers expecting the recent increases to hold for some time. Crushers are unwilling to make commitments as to future deliveries owing to the continuation of shipping scarcity. The price of seed fluctuates from week to week, but there is little downward tendency, the price of flaxseed having risen several points within the past two weeks. There is some movement, but for the most part deliveries are small, the business offered being of a sorting nature. Car shortage is likely to continue, and this will have its own effect, as in the past, toward maintaining high prices. The following quotations are being made:

Linseed Oil	Raw, Imp. gal.	Boiled, Imp. gal.
1 to 2 bbls.	$1.37-$1.41	$1.39½-$1.43
3 to 5 bbls.	1.36- 1.40	1.38½- 1.42

Turpentine Sales Light; Prices Held Firmly

Montreal.

TURPENTINE.—The demand for turpentine is somewhat limited now, but with all jobbers the prices hold very firmly. Stocks here are fair, and all demands are met promptly. If it were possible to secure ample freight accommodation, there would be an undoubted drain on Southern stocks, and it is stated that shipments that would be made to Europe would have the effect of creating considerable scarcity on this side of the water. From all the information available it is doubtful if the prices will be any lower. Quotations here are made as follows:

Turpentine—	Per Imp. gallon
5 bbls. and over	$0.73-$0.75
1 barrel lots	0.74- 0.75
Small quantities	- 0.83

White Lead In Oil Is Held Very Firmly

Montreal.

WHITE LEAD IN OIL.—There is a tendency to firmness in the market here, and no lowering of price seems likely in the near future. With an advance in pig lead in the United States market jobbers here feel that prices will be firmly maintained for some time, and that, taking all things into consideration, there will continue to be a firmness of tone. Much is now being used locally in the manufacture of mixed paint, but the outside demand is somewhat light. Prices here are as follows: Five-ton lots, $15.50 per 100 lbs.; one-ton lots, $16 per 100 lbs.; smaller quantities, $16.35 per 100 lbs.

Spring Paint Bookings Are Coming In Well

Montreal.

MIXED PAINTS.—It is usual to expect a fair volume of orders at this season of the year for shipment in the spring. Even though some retailers expected that there would be a lowering of price and refrained from buying, they now realize that it is as well to place their business without any further delay. Consequently, there is a good deal of satisfaction expressed from jobbing quarters as to the volume of the business received from outside points, and travellers are now covering their alloted territory. Sorting business is rather quiet, but this is a natural condition at this season of the year. Paint makers are busy, however, and express themselves as finding general business satisfactory.

Putty Movement Good; Prices Firmly Maintained

Montreal.

PUTTY.—The movement of putty is still good, and dealers are quite pleased with the volume of trade. While there has been no change, prices have been firm, with no indication that they will be lower. Some jobbers expect a falling-off in the demand soon, as the fine fall weather has permitted a large amount of glazing and storm window work to be done. There are ample supplies here of the products used in making putty, and demand can be readily taken care of from dealers buying in this market. The prices obtaining here are as follows: Bulk in casks, $3.60 per 100 lbs.; bulk in 25, 50, or 100-lb. drums, $4.45; bladders in bbls., $3.75 per 100 lbs.

TORONTO

TORONTO, Nov. 22.—Items in the paint, oil and glass market having the greatest interest during the week were gum and varnish shellac, wood alcohol and glass. In gum shellac there was a sharp advance recorded with the intimation that varnish shellac can be expected to move higher in the near future. Wood alcohol has also been moved to higher levels. While changes have not yet been made in glass the situation gives greater evidence of an advance in the very near future. Sorting business on paint continues light, but spring booking business is of fair volume. Linseed oil prices held steady during the week, but a declining tendency was noticeable in the price of flaxseed. Turpentine held in steady market.

Lack Of Transportation Holds Linseed Oil Steady

Toronto.

LINSEED OIL.—There was a weaker tone to the market for flaxseed during the week, but transportation conditions have operated to hold prices steady in the face of the weaker condition in seed. There is now no seed moving over the lake routes and supplies of seed that reach the Eastern market must come by the all-rail route. These systems are apparently already heavily taxed in moving grains and other food commodities. On Thursday of last week cash flaxseed was quoted at $3.27 per bushel and there was a sagging tendency during the week until the price of the cash seed had reached $3.12 on Wednesday of the present week. There has been a heavy movement of seed from the fields during the week as no less than 264 cars passed inspection on the five days from Friday of last week. The greater part of these shipments may be going into elevators. There was a rumor to the effect that the Dominion Government is likely to place an embargo on the shipment of flaxseed out of the country. Oil men are of the opinion that if this takes place there will be a slump in the price of flaxseed and that oil will of necessity follow downward also. Range of prices remain unchanged during the week. There has been a good demand for oil from paint

MONTREAL Nov. 6th. 1917.

REPORT.— 38255 PAINT MARKED "B-H ENGLISH PAINT OURSIDE WHITE. MANUFACTURED BY BRANDRAM-HENDERSON LIMITED. PURCHASED BY ROBERT JOB AT GOODWIN'S LIMITED, OCT. 26th, 1917. 1/2 PINT CAN."

BRANDRAM-HENDERSON, Ltd.,
MONTREAL.

Dear Sirs:-

We have purchased upon the open market a sample of "B-H 'English' White Paint", and on analysis find that it conforms fully to the guarantee given on the label, which states,

"70 Per Cent Pure White Lead) 100%
30 Per Cent Pure Zinc White) Pure

Mixed ready for use with Pure Linseed Oil, Turpentine and Dryer."

The results obtained were:-

White Lead	69.74%
Zinc Oxide	29.86
	99.60

Fineness	Very good.
Oil	Pure Linseed.
Turpentine	Present.
Benzine	Absent.

The formula given above is excellent for outside use where exposed to weather, and is considerably better under these conditions than when either Pure White Lead or Pure Zinc Oxide is used alone.

Very truly yours,

MILTON HERSEY COMPANY LIMITED

VICE PRESIDENT

TJ/MFT.

Read what is said by the "Man-who-knows"

Here's a letter that emphatically confirms our printed guarantee appearing on every can of B-H English Paint.

We have consistently maintained that B-H "English" Paint was the correct paint for Canada's Changing Climatic Conditions. This statement is also verified in the above analysis—made by a firm so thoroughly reliable that you cannot question their Report.

B-H "ENGLISH" PAINT 70% Pure White Lead, 30% Pure White Zinc, 100% Pure Paint

The 70% Pure White Lead referred to in the guarantee, is Brandram's Genuine B.B. White Lead, the world's standard.

If you are the Brandram-Henderson Dealer in your town, you can guarantee B-H English Paint to your customers as the best for Canadian use.

Your guarantee is backed by ours. Ours, in turn, is backed by the "Man-Who-Knows"—as you can plainly see from the above letter.

BRANDRAM-HENDERSON LIMITED

manufacturers, but the jobbing trade reports a light movement.

	Raw, Imp. Gal.	Boiled, Imp. Gal.
1 to 2 bbls.	$1.38-$1.50	$1.40½-$1.53
3 to 5 bbls.	1.38- 1.49	1.40½- 1.52
6 to 9 bbls.	1.37- 1.47	1.39½- 1.50

Turpentine Again Shows Firmer Undertone

Toronto.

TURPENTINE.—There was a slightly firmer understone to the market for turpentine during the week as a result of an upward turn in the primary market at Savannah where an advance of 2c per gallon was recorded. Prices in the local market held unchanged with a light demand. Those closely in touch with the situation are of the opinion that as soon as there is any chance to get export space to Europe there will be rapid movement in the upward direction on the price of turpentine. At the present time there is no indication when the war will be over, and presumably export cannot take place until such time as hostilities cease and ships are available for the export trade.

	Imp. gal.
1 barrel	$0.74-$0.75
2 to 4 barrels	0.73- 0.74
5 gallon lots	0.81- 0.82

Gum Shellac Goes Up; Varnish Shellac Firm

Toronto.

SHELLAC.—Owing to advances that have taken place in the primary markets the local market on gum shellac has taken a sharp advance during the week. TN is now quoted at 70c to 73c per pound, which represents an advance of 10c to 13c per lb. Finest orange gum shellac is quoted at 83c to 86c, an advance of 3c to 6c per pound, while bone-dry white shellac is quoted at 80c to 83c, an advance of 10c to 13c per pound. While varnish shellac had not been advanced at the time of writing there was a very strong market and intimations were made that an advance is highly probable. Methylated spirits have also been advanced in price and this is an additional factor tending toward higher prices in varnish shellac.

Wood Alcohol Moves In Upward Direction

Toronto.

WOOD ALCOHOL.—An advance of 5c per gallon in certain quarters and 25c per gallon in other quarters was recorded in wood alcohol during the week. In five-gallon lots the price range is now from $1.80 to $2.25 per gallon as compared with the former price of $1.75 to $2 per gallon. In barrel lots the price of wood alchol is $1.70 per gallon. An advance on the part of manufacturers of this product caused wholesalers to move their prices upward in conformity therewith.

White Lead In Oil Maintains Steady Tone

Toronto.

WHITE LEAD IN OIL.—There was a steady tone in the market for white lead in oil during the week, there being no market change in the pig lead situation or in the market for linseed oil. Demand for this commodity is light at the present time. In ton lots white lead in oil is quoted at $16.20 and in less than ton lots at $16.55 per hundred pounds. Paint manufacturers are busy getting their spring orders in shape and this is causing a good demand in that quarter.

Booking Business For Paint Satisfactory

Toronto.

MIXED PAINTS.—Manufacturers of mixed paints continue to be gratified over the volume of booking orders being received. There is apparently no hesitancy about booking for spring delivery. The retail dealer, however, has been given every assurance that he will not stand to lose no matter what the vagaries of the market may be. Booking is made on the basis that customers will be protected should a decline take place, while orders booked at present prices will be delivered at those prices should an advance be necessary. Sorting business is light. Prices are holding steady, there being no indication that a change is anticipated in the near future.

Tone Of Glass Market One Of Greater Firmness

Toronto.

GLASS, PUTTY.—In the local market there is every evidence that prices are headed toward higher levels, as the unmistakable feeling of wholesalers is that higher prices must soon prevail. There has been a fairly good demand for glass during the past fall months and stocks are getting low in consequence. It is only a question of short time until jobbers will have to enter the market to replenish their stocks and when they do they are sure to meet with higher prices.

Putty held unchanged at quotations of last week. While the majority of concerns are quoting on the basis of $4.65 per hundred pounds for bulk in 100-lb. drums, one jobber is quoting this sized container on the basis of $4.55 per hundred pounds. Fairly heavy stocks in this instance is the reason of the lower price in the 100-lb. drums. Other quotations held unchanged at prices given in current quotations.

TWELVEMONTH SALE OF PAINT

(Continued from page 68.)

heat, cold or moisture will not affect—very durable, and satisfaction guaranteed?

Do all the housewives know how easy it is to remove the ugly old varnish off that "odd" chair that they will need for the extra company at Christmas dinner, and then how to finish it so it will "match" with the rest of the furniture. If they do not it is your fault and your duty to put them "next" and thus yourself "next" to more profits.

You may know all about the lines you carry, but are you cashing in on the knowledge you have? There's big money in the specialties and now is the time to get it.

HARDWARE LETTER BOX

SOVEREIGN HOT AIR FURNACE

McKelvey & Birch, Kingston, Ont. Could you tell us where we can procure parts of the Sovereign Hot Air Furnaces?

Can any of our readers supply this information?—Ed.

NATIONAL PENINSULAR RANGE

Wm. McGie, Belleville, Ont.—Could you tell me where I can get repairs for the No. 9-21 National Peninsular Range?

The D. Moore Co., Ltd., Hamilton, Ont. —Ed.

Gas Globes

Hillhouse & McLeod, Clifford, Ont.—Kindly give us the name of a manufacturer of gas globes in Toronto.

The Jefferson Glass Co., 388 Carlaw Avenue, Toronto.—Ed.

EMBARGO ON IRON AND STEEL

By order-in-Council under the War Measures Act, goods listed herewith are prohibited to be exported to all destinations abroad, other than the United Kingdom, British Possessions and Protectorates, dating from November 15, 1917.

Pig iron.
Steel ingots.
Steel billets.
Steel blooms.
Steel bars.
Steel slabs.
Iron and steel plates.
Iron and steel shapes—comprising beams, channels, angles, tees and zees.
Iron and steel fabricated—for structural work and shipbuilding.

The prohibition of exportation is due to the serious shortage of iron and steel for munition making, shipbuilding and other manufactures. The United States Government has placed restrictions upon the exportation of iron and steel from that country, and has established a priority board to pass upon applications for export licenses. That board will give precedence to requests for steel for munition and other war supplies and for shipbuilding. It will then consider the needs of railways, railway car and locomotive building firms, and other industries.

Canadian manufacturers have conferred together with a view to laying their requirements before the United States priority board. It has been felt that at a time when Canada is applying to the United States for iron and steel, it should itself take steps to conserve the domestic output of such material for domestic uses. Export licenses will be granted by the Customs Department only for very special reasons.

The PANTAPHONE

Leads them all in BEAUTY, QUALITY, TONE, SIZE AND VALUE. Plays every make of Disc record.

DEALERS HERE'S YOUR CHANCE!

Sell the **Pantaphone.** It has a galaxy of attributes that makes it a positive easy seller, and there's a handsome profit for you on every sale.

The **Pantaphone** has no superior in the talking machine field in quality of tone, construction or anything else. But it sells at a **remarkably low price,** which commands attention instantly. No travellers are employed—this is one reason for the **good value** found in the **Pantaphone.**

Dealers are making handsome profits using the **Pantaphone** as a side line. Many dealers take the **Pantaphone** to prospective customers' home in their auto, leave it for a trial and later go back and sell it. You can do the same.

We protect the dealer and only sell through him. If you want to get in on **something good,** write quick,

HARDWARE AND METAL
143-153 University Ave. Toronto, Can.

Varnish buyers are realizing more and more the importance of selecting Finishes of known merit, owing to the high cost of labor, because the cost of application is the big item in finishing operations.

It costs no more to produce a handsome and permanent finish with "Berry" products than with the kind that wears out in a few months. The difference in the price per gallon is slight.

Berry Brothers varnishes, enamels and stains are safe to recommend and easy to sell, because even the smallest buyers have learned that they combine beauty, durability and economy.

Lawn Mower Prices for 1918

The 1918 Price Lists of the famous Taylor-Forbes line of Lawn Mowers is in the hands of the jobbers. It behooves every dealer to get quotations right away so that his order may be booked early. The uncertainty of the steel and iron market urges haste in buying so that stocks may be complete when spring arrives. If your jobber cannot quote on T-F Mowers write us direct.

MONTREAL

CARTER WHITE LEAD CO. OF CANADA LIMITED — STRICTLY PURE DRY WHITE LEAD — MONTREAL

Lengthen the Life of Metal Work

It is a hard problem to keep rust and corrosion from eating the very life out of metal structures, therefore, economy demands the best possible preventive against these destructive elements.

CARTER'S
Dry Red Lead

gives a perfect sealing coat that absolutely protects all kinds of metals from the elements that destroy them, and immeasurably lengthens the life of Metal Work.

We make Orange Dry Lead and Litharge,

Special Dry Lead and Litharge, for Color,

Varnish and Rubber makers,

Oxides for Potters and Storage Battery Makers.

All products are wholly Canadian made and highest standard qualities.

Ask for Quotations.

WRINGERS

Royal Canadian, $51.90 per doz., Eze, $56.10 per doz.; Bicycle, $63 per doz.; Ajax, $125.80 doz.

Bring the FACTS to the Notice of Your Customers About—

Stephens' REGISTERED TRADE MARK Paints

Tell your customers of the folly of using cheap, unreliable paints—paints that soon fade and wash off. Tell them how much more economical it is to pay a little more for a brand of paint that has won for itself a reputation for *quality* and *reliability*.

Tell your customers the facts about *Stephens' Paints*—how they have been giving satisfaction to the Western consumer for over 30 years and are still giving the best satisfaction in spite of hindrances put in the way of manufacturing by the war.

Stephens' Paints are essentially Western Canada paints, made to meet Western climatic conditions.

Dealers can't afford to sell a poor line of paints. It not only loses good paint customers but good hardware customers too when the paint fails to "make good."

If you haven't the Agency for Stephens' line let us hear from you. We give our agents splendid support in securing new business. Exclusive territory given.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly; packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Only through your jobber to-day.

PROGRESSIVE HARDWARE MERCHANTS all over Canada handle

"WAKYTE" Closets

The reason: More money for the dealer—better satisfaction for the purchaser.

Their special construction cuts your freight charges in half. Superior Quality and low prices make them a quick seller, and their great durability ensures absolute satisfaction to the purchaser. "Wakyte" Dealers can meet competition from any source, and offer far more value for the money.

This is the time of the year to sell "WAKYTE" Closets, and you cannot make money faster than by putting in your stock NOW.

Wakyte Mfg. Co., Limited
259-261 Stanley St.
Winnipeg, Man.

WAKYTE

ODORLESS SANITARY CHEMICAL CLOSETS

Have you some fittings you wish to sell? See page 99.

The Businessman's Mind

BANKERS are supposed to have a particular character of mind; Lawyers and Doctors likewise; Teachers also. These minds have both narrowness and breadth. They see widely and deeply in their own realms, and narrowly and sometimes shallowly in regard to matters outside their particular worlds. At least, this is the common supposition.

THE Businessman—What should be the character of this mind? —What is the mind of the Manufacturer, the Wholesaler, the Retailer? Certainly the Businessman's mind should be broad. It should be something of the Banker's, something of the Financier's, something of the Statesman's. The Businessman should see broadly. The horizon of interest and of inquiry for him should be a far one.

The happy thing about it is that the business man—manufacturer, jobber, retailer—can have the far outlook—this by the reading each week of a newspaper with a far outlook—

The Financial Post of Canada

This is a business man's paper—it is a paper for bankers, for investors, for trustees, for financial men. But it is also a newspaper for merchants, very much so.

Merchants need to know markets and market tendencies and market factors. They need to know conditions, local and remote. They need information to buy right and to sell safely.

And the knowledge they need they can have for the insignificant sum of $3 annually.

THE FINANCIAL POST is a most readable paper—positively enjoyable to the layman reader. It makes any man broader minded, and every business man a better business man. Growth in bigness at $3.00 a year!

Send for free sample copy to the Publishers, or sign and mail the attached coupon.

THE FINANCIAL POST OF CANADA
143-153 University Avenue, Toronto

.....1917

Please enter me as a regular subscriber, commencing at once. If I am satisfied with the paper I will remit $3.00 to pay for my subscription on receipt of bill.

PEACE BY CHRISTMAS

A POWERFUL editorial dealing with the important war developments of the week, including Lloyd George's speech in Paris and Lord Northcliffe's letter regarding the new Air Ministry. These statements are a startling revelation of existing conditions in British political circles and confirm once more THE FINANCIAL POST'S policy in advocating these fearless, able men as the most essential for the winning of the war and for lifting us out of the mess into which the intellectual, incompetent Asquith-Grey-Churchill-Balfour combination had got us.

GOVERNMENT REGULATION AND THE HOG INDUSTRY

There is a serious and imminent danger that the proposed government regulation of packing profits will have the effect of handicapping the market facilities for Canadian grown hogs. It is not only proposed to reduce the profits on turnover but in addition to reduce possible income to a maximum of 11 per cent. Any step which is likely to interfere with the development of marketing facilities may quite easily reduce the price to the hog raiser to a much greater extent than any benefit to the consumer. The higher the market for hogs the greater the benefit of the hog raising industry to the whole country.

WALL ST. BEARS CONTINUING TO PLAY WITH C.P.R.

A special article from our correspondent in New York dealing with the market developments as regards Canadian Pacific stock during the week. The heavy liquidation in this stock continues; in fact over 500,000 shares or more than 20 per cent. of the entire common issue outstanding have changed hands since the 1st of July.

SHELL ORDERS CONFIRMED

Official announcements from American sources during the week have confirmed the advanced reports of the Financial Post as to orders placed in this country by the American government for shells. The business so far is for 7,000,000 75 millimetre shells. The American shell orders in sight total about $50,000,000 but it is expected that the orders will continue indefinitely and that the total will go at least $100,000,000 to $200,000,000.

The foregoing are only a few of the special features of the FINANCIAL POST'S 20-page issue last week. Attention may be directed to such other articles as:—

"Automobiles Have Helped Out on Farms."
"U. S. War Orders Will Help Our Trade Balance."
"Some Revival of Interest in Canadians."
"The Good and Evils of Short Selling."
"Railway Capital is Also More Expensive."
"Public Utility Companies are Facing a Crisis."
"Book Paper Probe Quite Intricate."
"Mr. McAdoo Does Not Want Bonds to Cross Border."
"Canada's Part in Future of West Indies."
"Prime Cause of Rise in Bar Silver."
"Big Business and its Part in Great War," etc.

These special articles were all in addition to our regular departments and regular service. These include News of Securities, with items on practically all important Canadian stocks, our pages for bankers with space devoted to practical problems of the branch manager, News of the Bond Market, dealing largely with the Victory Loan, Field of Municipal Finance, Investors Insurance Notes and Real Estate and Mortgages.

All features and departments are compiled and arranged in the interest of the Canadian investor and the Canadian business man.

Each issue of THE FINANCIAL POST is quite as interesting.

The following letter from a very prominent manufacturer and salesman indicates the high opinion in which the paper is held by its subscribers.

THE FINANCIAL POST,
Toronto.

Dear Sir:

Recently we sent you a subscription covering the delivery of The Financial Post to each of our Sales Agents and Salesmen throughout Canada. This was prompted by the fact that, in our opinion, your paper is the best barometer in Canada of what is going on in the different industries from one ocean to the other in this country. Your paper contains information valuable to any traveling representative of any firms.

(Sgd.) F. E. MUTTON,
Vice-President,
International Time Recording Co., Toronto.

Oct. 12, 1917.

THE FINANCIAL POST is mailed every Friday night. Sign attached coupon and take advantage of the splendid weekly service it gives its readers.

FINANCIAL POST OF CANADA,
143-153 University Ave., Toronto.

Please enter me as a subscriber commencing at once. I will forward $3.00 for my subscription on receipt of invoice.

Sell Handles that are Most in Demand

STILL'S

There are more of STILL'S HANDLES sold in Canada than any other make. What's the logical conclusion of this fact?—*they are the best.*

There's a Still Handle to meet every need: Axe, Pick, Sledge and Hammer Handles; Cant Hook and Peavie Handles.

There's nothing like selling the best of everything. Good profits in our handles, too.

Wanted

SITUATIONS VACANT

WANTED — CLERK FOR SASKATCHEWAN country hardware store, with knowledge of tinsmithing. Apply Box 498, Hardware and Metal, Toronto, stating age, salary, experience.

WANTED — EXPERIENCED HARDWARE clerk for live business in large Saskatchewan town; must be a hustler; permanent position for right man. Apply Box 502, Hardware and Metal, Toronto, or Winnipeg preferred.

WANTED — CLERK WITH ABOUT TEN years' experience, for country retail hardware store; must be a salesman. Box 173, Lougheed, Alta.

Twelve Cents Per Word!

Several weeks ago a firm in Vancouver, B.C., telegraphed a want ad to Hardware and Metal. They wanted a clerk in a hurry and wished to catch the earliest issue.

The cost of a telegram from Vancouver to Toronto is ten cents per word, added to this was our charge of two cents per word.

This firm had faith enough in Hardware and Metal's Want Ad column to pay *twelve cents per word,* for an announcement in this column. This little story speaks for itself. Mail or wire your want ads, we will accept them until Thursday noon for the current issue.

Hardware and Metal Want Ad Dept.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

WANTED

WANTED—BY STEEL WORKS IN PENNSYLvania, United States, producing exclusively crucible cast steel, principally high speed steel, a representative in Canada who is thoroughly familiar with the tool steel business and will devote his entire attention to same. Reply S. F. B., Canadian Machinery. c24m

MISCELLANEOUS

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fensom Elevator Co., Toronto.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

Getting Results

A large firm in a Western Canada city recently advertised in Hardware and Metal Want Ad. Page for a man to fill a responsible position—result 21 replies. This indicates that the want ad. page is followed closely. The man YOU want to reach is reading this page.

Here is how it is lighted

A QUICK SELLER!

The Lamp that threw the Alcohol Torch into the discard.

The only Gasoline Lamp manufactured in Canada. This lamp will sell quickly because of its great convenience and economy.

Illustration on left shows the method of lighting the modern

"MATCH-O-LITE" LAMP

It needs no torch. Uses no alcohol. One match lights it. Burns for 15 hours on 1 quart gasoline. 300 candle power. *Safety*—can be held in upside down position without fear or danger.

Write for circular giving styles and full specifications—then *order as early as possible from* your nearest wholesaler in Winnipeg, Saskatoon, Calgary, Edmonton, Lethbridge or Vancouver and cover yourself for Fall and Winter requirements.

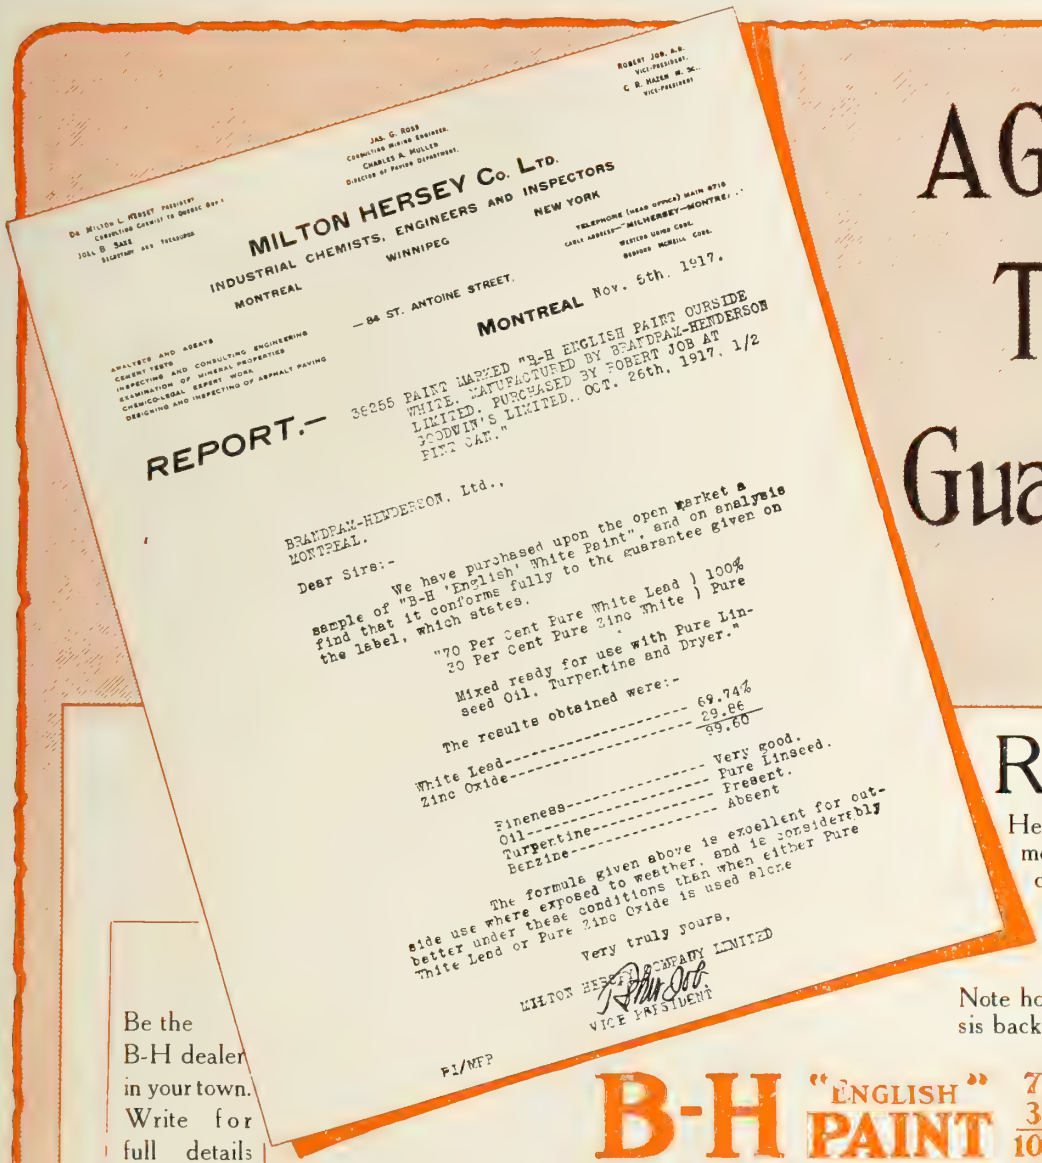
HARDWARE AND METAL

Vol. XXIX No. 48 — PUBLISHED EVERY SATURDAY SINCE 1888 — December 1 1917

THE MACLEAN PUBLISHING COMPANY, LIMITED

PUBLICATION OFFICE: TORONTO, CANADA



MILTON HERSEY Co. LTD.
INDUSTRIAL CHEMISTS, ENGINEERS AND INSPECTORS
MONTREAL WINNIPEG NEW YORK
84 ST. ANTOINE STREET.

MONTREAL Nov. 5th. 1917.

REPORT.— 38255 PAINT MARKED "B-H ENGLISH PAINT OURSIDE WHITE. MANUFACTURED BY BRANDRAM-HENDERSON LIMITED. PURCHASED BY ROBERT JOB AT GOODWIN'S LIMITED. OCT. 26th. 1917. 1/2 PINT CAN."

BRANDRAM-HENDERSON, Ltd.,
MONTREAL.

Dear Sirs:-

We have purchased upon the open market a sample of "B-H 'English' White Paint", and on analysis find that it conforms fully to the guarantee given on the label, which states,

"70 Per Cent Pure White Lead } 100%
30 Per Cent Pure Zinc White } Pure

Mixed ready for use with Pure Linseed Oil, Turpentine and Dryer."

The results obtained were:-

White Lead	69.74%
Zinc Oxide	29.86
	99.60
Fineness	Very good.
Oil	Pure Linseed.
Turpentine	Present.
Benzine	Absent

The formula given above is excellent for outside use where exposed to weather, and is considerably better under these conditions than when either Pure White Lead or Pure Zinc Oxide is used alone

Very truly yours,
MILTON HERSEY COMPANY LIMITED
VICE PRESIDENT

FI/MFP

A Guarantee That is Guaranteed!

READ the report on B-H "English" Paint made by Messrs. Milton Hersey Co.--one of the foremost firms of analytical chemists. Their opinion is absolutely reliable — one that could not be prejudiced or influenced.

Note how completely their analysis backs up our guarantee of

B-H "ENGLISH" PAINT

70% Pure White Lead
30% Pure White Zinc
100% Pure Paint

Be the B-H dealer in your town. Write for full details of exclusive representation.

For your own assurance that B-H "English" Paint is all that we claim it to be, read this letter. If you are the B-H dealer in your town, you will enjoy a feeling of satisfaction. You will be positive that you are handling the ideal paint for our varying Canadian climate. You can point out to your customers the guarantee on the label, knowing that the paint in the tin will fulfill that guarantee.

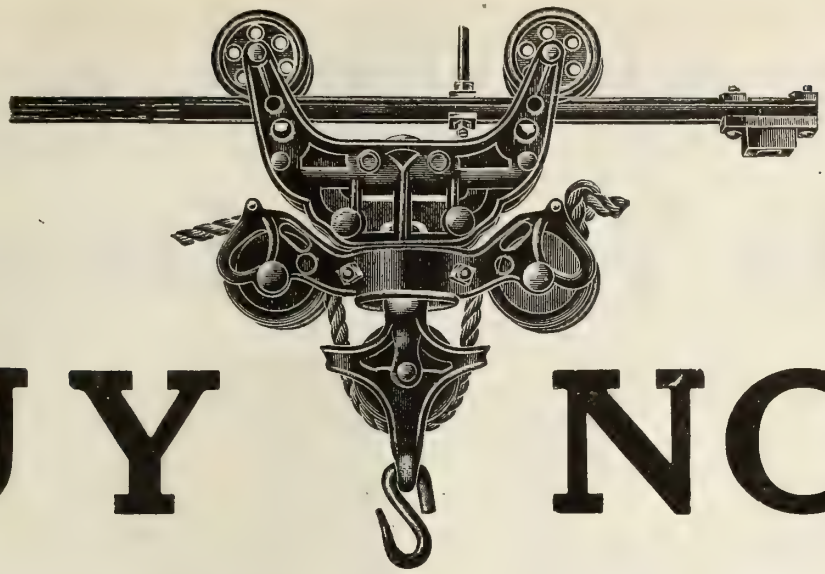
TRADE MARK



BUY NOW

And Be Sure of Your Supply

A BIG demand for hay tools next summer is inevitable. Almost every acre that will support a crop will be seeded. The Government has helped to solve the labor problem by supplying tractors for Fall ploughing. Crops next summer are certain to surpass all history; and there will be a demand for hay tools equally great.

The demand for hay tools has every year been larger than the year previous. Next summer's demand will far exceed that of the summer which has just passed.

There was a shortage of hay tools this summer. There will be a greater shortage next summer, because the increase in manufacture has not kept pace with the increase in crop production. The increased cost of malleable iron and the scarcity of it, as well as the scarcity of labor, prevent our increasing the production of this line as we would like. Many farmers will call at your store next summer for hay carriers and hay tool supplies. They cannot wait, for to wait means a partial loss of their crops; they must get their hay tracks, forks, pulleys, cars, rope, etc., from you or from someone else. Make sure of your supply so that you will not lose this trade. Make sure by ordering now.

If you wait, you may have to order the goods to come by express, and express charges and phone messages eat up a lot of profit.

The terms are July 1st, if for delivery not sooner than February 1st.

We will fill all orders in their turn. First come, first served. If you order now, your goods will be shipped before the goods of the dealer who puts off until the last moment.

UNIVERSAL

In Ye Old Days

a fire-place was absolutely requisite to a piping hot cup of coffee. To-day this luxury may be enjoyed in any place or clime by simply unscrewing the cover of a Universal Vacuum Bottle.

Universal bottles may be obtained with three nested cups in cover, making four in all.

The filler is sustained by a spring steel shock absorber which reduces breakage to a minimum.

Actual tests have proven that Universal bottles have the greatest temperature-retaining efficiency.

Demonstrate these wonderful qualities,—show off the beauty of the design and finish—sell more Universal bottles. By so doing you will make more customers and more money.

To insure delivery before Christmas we urge that you order at the earliest possible moment.

Here's a way to get good new business

Put a "Reeds" Oily Waste Can on your floor and let the managers of every factory in your territory know you have it.

Drop a note to each one and say simply, "If you will drop into my store I can show you something that will cost you little but will materially reduce the insurance rate on your factory." They'll come to see—the rest can safely be left to your salesmanship and the merits of the can itself.

"Reeds" Oily Waste Cans are made to conform to the requirements of Fire Insurance Underwriters.

There's only one way to buy "Reed" Products — direct from the maker. Send in your order to-day or write for more particulars.

Large Stock. Prompt Shipment. Special Dealer Prices.

We are not Playing Checkers

Every man-jack of us at the Carborundum plant is working like the proverbial beaver, for never before has there been such a demand for Carborundum and Aloxite Products.
We are doing our level best to meet this big demand—enlarging our plants, increasing our forces, speeding up production—we are even building a big 20,000 horse power furnace plant in Canada in our efforts to keep up with things. We have a definite service to perform for we are helping to produce the necessities of war.

Carborundum and Aloxite Products are Doing Their Bit

They are grinding shrapnel shells, high-explosive shells, rifle barrels and parts—grinding bayonets and sabers. They are grinding a hundred and one different parts of the aeroplane and the auto truck, the machine gun and the field gun. They are shaping armor plate and grinding car wheels; grinding plowshares, and the tools of the metal-working trades of the world. They are grinding torpedo tubes and torpedoes, grinding submarine engine bases; beveling the lenses of periscopes and buffing the soles of the army shoes and grinding the shears for the pocket kits of the "Sammies." They are doing a thousand and one war tasks quicker and better than they have ever been done before.

Carborundum and Aloxite products are surely doing their bit, but with it all we haven't neglected for one instant our regular patrons—we are doing all in our power to keep up with the pace; to keep up to the standards of Carborundum service.

A Satisfied Customer

The greatest asset a retail merchant can have is a satisfied customer

There are three ways by which a customer can be really satisfied,—

(1) Good goods at the right prices.
(2) Courteous treatment.
(3) Prompt service.

Good goods at the right prices can be supplied by turning your stock over as frequently as possible and by figuring on a fair margin of profit.

Courteous treatment is due all your customers. Your clerks should treat your customers with the greatest civility and respect.

Prompt service can be given customers by employing the most efficient methods of handling sales.

A National Cash Register System is the most improved method in the world. It eliminates delays, disputes, errors, and creates a friendly rivalry among your clerks. It conserves your profits and keeps down overhead cost.

Write us for further information. This will place you under no obligation.

The Deadly Parallel

Of Use Under Exactly Similar Conditions Demonstrates the Superiority of Armco Iron

The illustration is of Armco Iron Chain Link Conveyor Belt, as made by the Page Woven Wire Fence Co., of Adrian, Mich. This pattern is used in a chemical factory for conveying a corrosive mash a distance of several hundred feet. This use is extremely severe on iron and steel: conveyor belts made of ordinary material last only a few weeks. Armco Iron belts serve so much longer that they are to be employed exclusively.

The National Refining Co., of Cleveland, O., has found that Armco (American Ingot) Iron tubes in Lehman condensors last from two to three times as long as other irons and steels formerly employed.

The St. Joseph Lead Co., of Herculaneum, Mo., states that in convertor hoods, where the service is exceptionally severe, Armco Iron has over twice the life of alternate metals, the test being that of actual use, side by side.

The American Rolling Mill Company

MIDDLETOWN, OHIO

AMERICAN ARMCO INGOT IRON

The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

Suggest These to Go with Electrical Appliance Gifts:

For months we have been steadily publishing the reason for and advantages of the BENJAMIN "92" Two-Way Plug and other BENJAMIN devices that go to make Electricity a better servant. Now, your Christmas trade offers you special opportunity to boost the sale of these articles—and we will give you further help through our Special Christmas advertising. Whenever you sell a toaster, percolator, iron, or whatever it may be, you may be almost certain of a further profitable item by mentioning these two valuable additions:

Benjamin

"92" Two-Way Plug

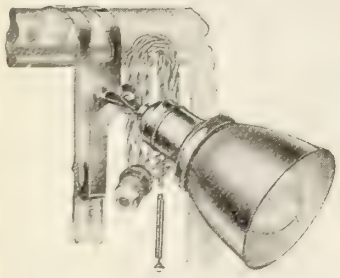
Your customers all know something about The Benjamin "92" Two-Way Plug. All you have to do is to emphasize by word of mouth what we have said in Newspapers and Magazines — how necessary — how simple — and how economical — is the Benjamin "92" way of making two outlets for current where there's only **one** — and you have made your sale and made a good friend as well. Don't go wrong in ordering — imitations are like "gifthorses" — too cheap to be good—be sure it's BENJAMIN.

C-H Seventy Fifty SWITCH

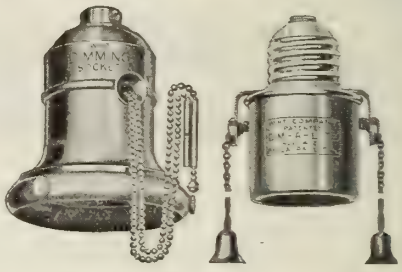
This is the switch that you can attach to the cord so that it is right under the thumb of the operator—no reaching to overhead sockets — no walking across a whole room to push the button — no waste of current, because the C-H Seventy-Fifty is so handy, it just can't be forgotten. Such talking points as these mean an easily-sold article.

DON'T NEGLECT IT!

Every Customer is a Prospect for the DIM-A-LITE



Everyone wants to be able to turn electric light up or down, like gas—and that's just what the Dim-A-Lite makes possible. It is made in three forms: as an attachment socket to screw into any lamp, as a permanent fixture, or as a portable. The price is particularly attractive, too, so that the Dim-A-Lite is a ready seller. Write us to-day for full particulars.



Counter and window displays of these articles will serve as a timely reminder. Our Selling Helps will aid you. Let us get together— Write us to-day!

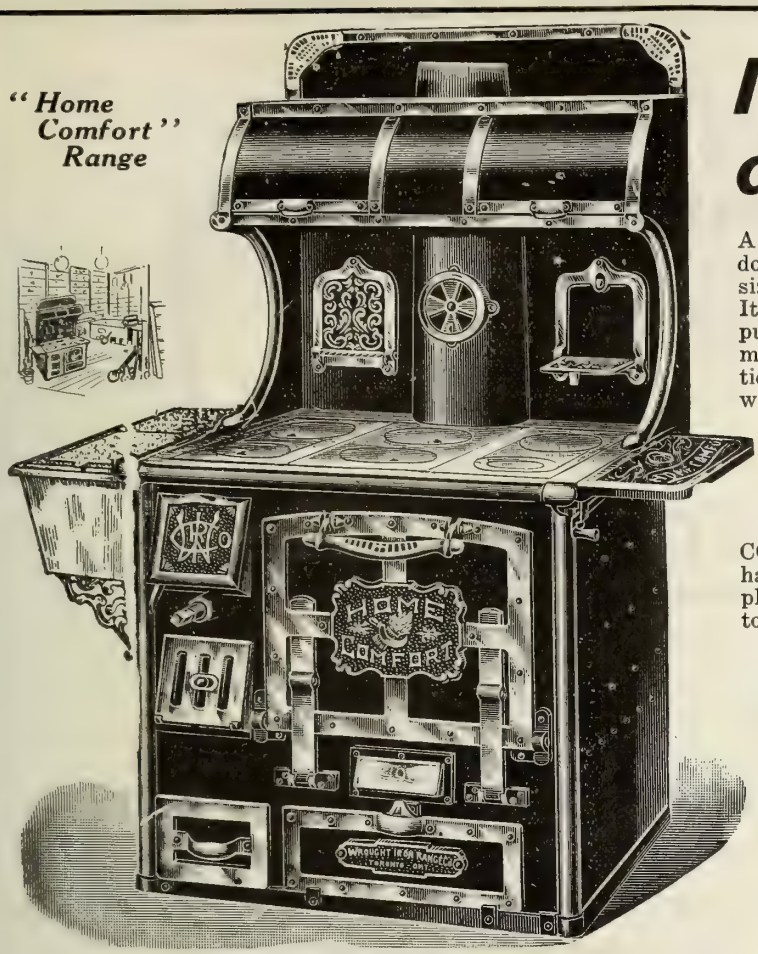
"Home Comfort" Range



It's Wise to Sell a Single Model

A dealer acting as agent for the "HOME COMFORT" doesn't have to keep a big stock. We make only one size and one style. This simplifies matters a whole lot. It used to be, and still is, the custom for the dealer to put forward on his floor the simplest and cheapest model of a range, and to sell his customers this particular range. Then having made the sale, the dealer would proceed to induce the customer to buy extras. For this purpose, the more expensive models kept in the rear would be used for the purpose of demonstration.

Experience has taught a good many dealers that it is wiser to sell but one model, a model like the "HOME COMFORT." It saves time and money—dealers do not have to carry a large stock. This single model plan pleases the customer, too, and makes it safe and easy to make a choice.

We have made the "HOME COMFORT" the most easily sold range on the market. Write for agency proposition. It's a good one.

Wrought Iron Range Co. of Canada, Limited

Office: 151 King St. West TORONTO, ONT. Factory: 22 Orillia St.

"White"

MOP WRINGERS

EASE OF OPERATION, THEIR GREAT UTILITY AND THEIR SUBSTANTIAL CONSTRUCTION, COMBINED WITH THEIR PRICE, MAKES THE WHITE MOP WRINGER A RAPID SELLER.

Made of malleable iron and the best of hard woods — Maple or Birch. Fits any kind of pail and wrings the mop thoroughly.

It has more than one use —often used for fruit and vegetable presses and works perfectly. The advent of the White Mop Wringer proved a boon to the housewife—it sells itself and is a good profit-maker.

War Preparations in Washington

How the United States Government is Using the Services of Business Men to Organize the Country for War—Canada Can Learn Much From What Has Been Done—A Brief Survey of the Steps That Have Been Taken Toward Co-ordination.

EDITOR'S NOTE.—*This is the first of a series of six articles covering the situation at Washington as seen by one of our staff. The efforts of the Government in co-ordinating business with government activities is meeting with a great measure of success and the steps which are being taken will be outlined fully. The seres should be of great nterest to men engaged in all branches of business.*

Washington, D.C.

UNCLE SAM is now preparing for a long and grim war. His whole war outlook has changed during the past two months, in fact. At first he harbored the notion at the back of his head that the world was on the threshold of peace. Something was going to happen to bring it about; Austria was going to knuckle under; the German people were going to heave up and slide the Hohenzollerns into the abyss; the western front, bending and straining under Haig's hammer blows, was going to suddenly crack.

This unbounded optimism has now vanished and the American Government is working tooth and nail to create a war machine that will represent the full might of the American nation and be good for the strain of years of warfare. Washington is bending to the task. The inadequate suit of war clothing that had been cut out and partly basted has been ruthlessly ripped apart and the master cutters are at work on a fit for a full-grown, powerful warrior.

A visit to Washington reveals the grim determination with which the task is being taken up. There is a full realization there that, with a population of one hundred million, a glut of wealth, an unparalleled industrial development and practically inexhaustible resources, the American people are in a position to wage war mightily. That is, if the will of the people can be welded into the strength and flexibility of steel, if the wealth can be applied and if the industrial resources of the country can be utilized for war purposes. This is Washington's task. It is not difficult to raise an army of anywhere from one to five million men. But to feed. clothe and arm that army, to help feed the allied countries, to build ships faster than the U-boats can sink them, to provide transportation facilities; all this is a giant's task.

The American Government is going to rise to the emergency. There are several reasons for believing this, but the greatest is that the Government has *conscripted brains.* An organization is being built up in Washington which will control business in every State of the Union and effect the closest co-ordination between the Government and the business interests of the country.

Washington in a Turmoil

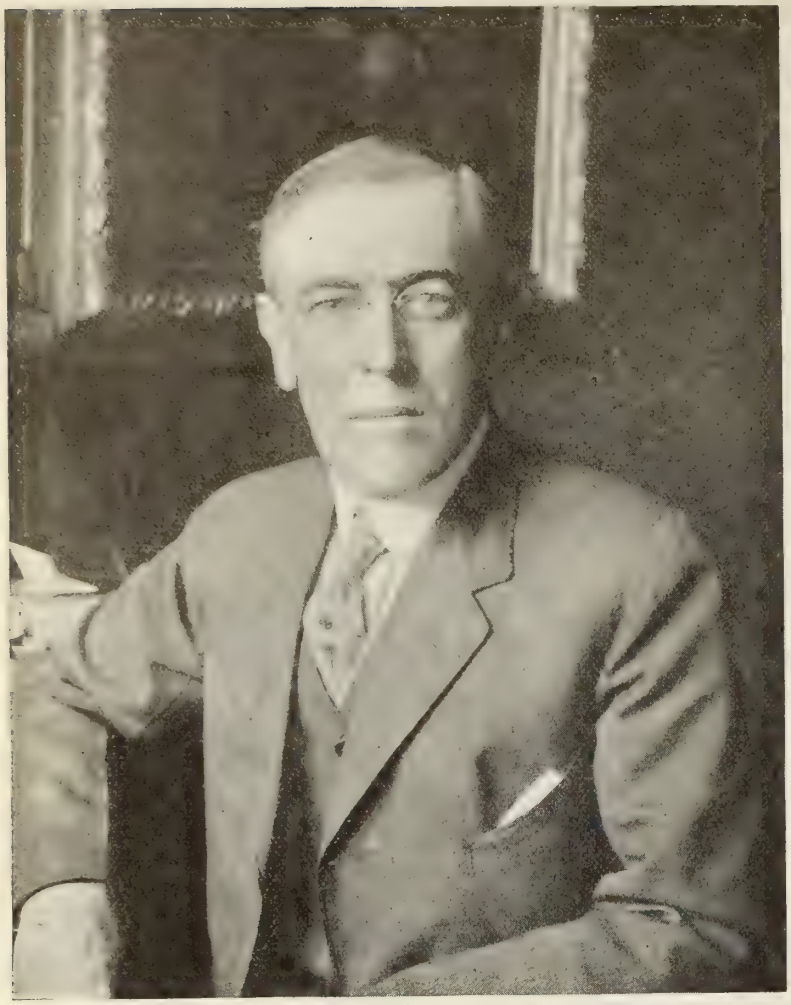
To say that the capital city is in a turmoil is putting the case mildly. Always a staid and dignified city, given over exclusively to the orderly processes of federal government, Washington has suddenly been called upon to house a galvanic, ever-growing organization capable of running a war. The place has become crammed literally to the roof. The Government is spreading out, annexing buildings, erecting new ones, expropriating private residences, monopolizing hotels. The trains running in and out of the city are always crowded. Hotel rooms are at a premium.

I arrived in Washington late one night and confidently sought out the hotel where I had made a reservation. It looked like a place under siege. I fought my way to the desk through a crowded rotunda and finally engaged the attention of one of the harassed clerks.

"Reservation? Oh, yes," he said. "But all these people have reservations too—and we haven't a room vacant. Just got word from the gov'ment to hold seventy-five rooms with baths to-night. Sorry."

I learned later that a deputation of boot and shoe manufacturers were due that night to go into matters of leather supply and army boot contracts with the Government. They came at the request of the federal authorities and they had to be accommodated. Just pause a moment and look that idea over. Seventy-five business men, experts in their line and from all parts of the country, had been summoned to Washington to give the buyers of the Government advice on the leather situation. It is safe to say that, when they left, the leather situation had been solved to the satisfaction of the Government and the manufacturers as well. The old way was for a few politically appointed officials to decide on some

New buildings being erected at Washington for the Shipping Board.



Wilson is the hardest nut the politicians have ever tried to crack.

course of action and then find out how it suited conditions later.

Canadian Fliers Here

So I went over to the next hotel in line and found it just as crowded, if not more so.

"Government's ordered forty rooms," was the explanation of the clerk. "Some flying men from Canada coming, a bunch of automobile men and a deputation from California. Can't accommodate our own customers nowadays."

I finally got a room that night in a hotel improvised out of some old stores, a room over a moving picture theatre and containing a zinc bath with the date stamped indelibly on it, 1885. Next morning I visited fourteen hotels and got a room in the last one on my list.

I found afterwards that the whole city was in the throes of expansion to meet the sudden influx. Buildings are being rushed up on every hand, particularly apartment houses. Rents have doubled. I met one man, a faithful civil servant whose salary had crept up twenty per cent. and who this fall had seen his rent go from $40 a month to $85.

A story is told of expert profiteering on the part of some enterprising real estate men. Several contracting firms had gone extensively into the building of apartment houses this summer. The foundations were scarcely in when it was intimated to the builders that the whole accommodation would be needed for government purposes. The intimation came through real estate agents, but it looked like government business and the contractors gave blanket leases covering all apartments. When the buildings were completed the agents stepped in and started to release the apartments at double the rental paid the owners and to private parties. On one apartment house alone the agents are making a clear monthly profit of $800—and they don't have to turn a finger.

Temporary Government Offices

The Government has been forced to extend into practically every part of the city. New buildings are being erected, some of them of a purely temporary nature.

When the formation of the Advisory Commission of the National Council of Defence had been completed, the question of accommodation arose. The machinery built up was an extensive one and many hundred offices had to be provided for the men who were coming to Washington to organize the resources of the country. When estimates of rental costs were received the officials in charge were rather staggered.

"We can put up temporary buildings and save a lot of money," said one.

"But," objected one of the National Council, "some of these men are on their way to Washington now. They must be accommodated right away. The work is important. It can't be delayed—not by a day."

"All right," declared the first speaker. "We'll get you temporary offices, but we'll start in now and put up a building for you. I'll guarantee personally to have it ready in two months."

It looked like a big order. But that very afternoon authorization was secured for the use of vacant Government land within sight of the White House—and the contracts were let! The building was practically completed in fifty days. In fact, on the fiftieth day the officers of the Advisory Commission moved in and found everything ready for them. It is a stucco building of good appearance with beaver board partitions and pine floors. It is commodious and thoroughly suitable and it represents a saving to the Government of the United States of several hundred thousand dollars. To the mind of the observant visitor it is emblematic of democracy and of the kind of efficiency that grows out of the co-ordination of business brains and experience with Government authority.

Increasing the Capital's Facilities

The orderly old city has been upset in other ways. So tremendously has the volume of business done there been increased that the telegraph and telephone facilities were hopelessly inadequate. In the early days when the war organization was just beginning to sprout from the aged trunk of the civil service, officials used to find themselves repeatedly up against an *impasse*, with the wires choked with rush messages and the long distance lines filled. All they could do was to sit back and wait. Finally the heads of the telegraph and telephone companies were summoned to Washington and an arrangement effected by which the management of all lines was pooled and placed in the hands of a joint board subject to Government control. More about this arrangement will be told later, but in the meantime it is interesting to trace how the congestion at the capital was relieved. The number of wires out of Washington was immediately increased from 148 to 294, and these will be added to. Construction was started on a new central telephone office with an ultimate capacity of 10,000 lines. Systems all over the United States were overhauled and coordinated with the result that 10,000 miles of special systems were withdrawn from commercial use entirely and given over exclusively to the Government.

As an evidence of why so extensive enlargements of the service were necessary a conversation with the head of one of the branches of the Ordnance department may be quoted.

"What change has come about in the size of your department as a result of the war?" he was asked.

"Up to April of this year," he replied, "the whole staff of the department numbered 150. It is impossible to say how many we have working for us now, owing to the tremendous ramifications of the

system. There are advisory committees and men serving without salary. But we have 3,000 clerks and stenographers alone and to-day we occupy 11 buildings. Next year? We may need the whole city just to house this department."

The Government and the Business Man

But the main object of this series is to show how the American Government is handling what might be termed the business side of the war; how industrial resources are being organized and business experience utilized in the tremendous work of girding up an industrial nation for war. It has been getting more apparent all the time since August, 1914, that wars are not won entirely on the battlefield, but that victory in the first place must be hammered out in the factories and calculated in the counting houses and wrested from the soil. The best prepared and organized side will win this war.

Thinking men in Canada have felt that our own efforts toward national organization have been inadequate and that a change would have to be made before we would be able to take our full share in the struggle for democracy. There has been no organized attempt to co-ordinate business interests with the Government. Up to the present the work at Ottawa has been carried on very largely by political appointees. There has been inertia, lack of initiative, all the evidences of the ineptitude that accompanies party government. It may be that, after the pending election, there will be a complete change. In the meantime, however, thinking people in Canada have watched developments in the United States with keenest interest and they have seen the Government at Washington inaugurating measures that we in Canada have not yet undertaken. They have seen Uncle Sam gathering to his aid the most successful men in all branches of activity—business men, engineers, educationalists, labor leaders—and through them organizing the resources and the man power of the country in a way that no government alone could do. It has been an object lesson.

An Organization Full of Faults, But——

The work done at Washington is far from perfect. The war organization that has been created is unwieldy, shamble-jointed, wide open to criticism. And it is drawing criticism in full measure! The chorus of discontent comes from all quarters. Business men are not satisfied with it. It needs to be boiled down; authority must be concentrated; execution of work must be speeded up. The politicians clamor against bringing in business men; the public howls a sustained protest perhaps on general principles.

"You have come down from Canada to find out how we are doing things here?" asked one official—and he was placed high up—with a degree almost of astonishment. "Why, we are doing nothing yet the way we should. We have everything to learn. We're groping. I'm afraid you can't learn anything from us."

This spirit was reflected in varying degrees everywhere. They are not at all satisfied with what they have done. They are going at the task of finding better methods with a grim, stick-at-nothing attitude that promises results. Part of the hastily constructed machine is going to be pulled down and rebuilt. And, from present indications, it is going to be rebuilt *right*.

A survey of what has been accomplished to date leaves the impression that we can learn a great deal from Uncle Sam. A visit to the temporary building down at D and 18th Street, where the advisory committees of the National Council of Defence are located and a study of what has been accomplished there deepens that impression. They haven't done everything right by long odds, but some of the things that have been done can be described only as miracles.

It is intended, therefore, to tell just what has been done. A duty that war imposes on all belligerents is to profit by the examples and the mistakes of Allies and foes alike. The United States is profiting by the achievements and the mistakes chiefly of the Allies; and Canada in turn can profit by keeping a close watch on what is transpiring in Washington.

Why Business Went to Washington

The all-important thing done has been the conscription of business brains and experience; all important because it is the foundation on which the whole organization is being built. This principle was not adopted without opposition. The professional politician class fought vigorously against bringing business men to Washington. War was a matter for government control; let the business man stay in his factory and his warehouse and produce what he was ordered to produce.

The story goes that some of them waited on the man who sits in the White House. By the way, the politicians have found that Wilson, the Professor, who it was thought would be as putty in their hands, is the hardest nut to crack that politicians have ever had. He puts on his glasses and in that cold, academic way he has proceeds to find the joker in everything they put in front of him.

However, a few of the inner circle carried the protest of the professional politician to the White House. They voiced their resentment of the movement for co-operation with the business interest. The President heard them through.

"Are you aware that before this war is won," he said, according to the story, "it may be necessary to take men from every industry in the country, to take all materials, to utilize every factory? Could the Government do this best with the co-operation of the men who control and understand industry or without it?"

"You have probably not considered," he went on, "that this war is not going to be won by armies. It is going to be won in the factories and on the farms."

The interview was a brief one. The principle of working closely with the business men of the country was firmly established.

Big Men in the Government Service

In the first place, it became necessary to create new positions. For the most part they were filled by securing the men best fitted for each post quite apart from all considerations of political expediency. The Shipping Board was created and "Hurry up" Hurley was secured to take charge. Hurley is the best man that could have been found in the whole of America for this particular job—a two-fisted, dynamic executive who gets things done and has long experience behind him. Col.

(Continued on page 55.)

A new Government building at Washington.

"Hurry up" Hurley, the business man, head of the U.S. Shipping Board.

Getting Returns from Display Window

The Drawing Power of the Window Display — Works 24 Hours a Day and 7 Days a Week—Points to be Considered in Arrangement — The value of Price Cards—Christmas Goods Should be Featured Now.

WITH the Winter and Christmas holiday seasons fast approaching, merchants who are looking for the largest returns from business during these seasons are busying themselves in the preparation of window arrangements that will be effective in drawing trade during these special periods of the year. Competition for business at these times is greater than usual and the only way to successfully compete is to have such window dressings that the passing customer will instinctively be drawn to further investigate and ultimately become a purchaser. Window displays have a tremendous effect upon the individual, and sometimes this effect reaches the proportions of a semi-hypnotism which literally carries him off the street into the store. Really effective window displays are irresistible and represent the most powerful medium for the attraction of trade. For this reason some few suggestions along the line of window dressing will not be out of place at this point.

Windows Always Open

In the first place, the merchant should remember that when his store is closed to the public the windows are always open, that is if he uses his windows to the best advantage. Generally during the holiday season this is the case, even if such is not the practice at other times of the year. At night, on Sundays and holidays, when your store doors are closed the windows can be made pay a dividend. People strolling along the street will pause before a well-lighted, tastefully arranged window display and pass by the dingy, unkempt one with disdain. At Christmas time the number of people on the streets at night is much greater than normally and this element is therefore of greater importance at this season. The people who are attracted will become your customers, all things being equal.

A certain merchant in a small city made it a habit to keep his windows dark; as a result he had no attraction after nightfall. On the other side of the street was a storekeeper who spent a few dollars a year for light and reaped a harvest by so doing. Which pays the better, and what course do you pursue?

It matters little what is placed in the windows as long as the goods are fresh and clean. Certain holiday goods are peculiar to every store, and it is not necessary to enumerate these herein, but freshness and cleanliness should be the predominating elements. Some merchants use their windows for a sort of dumping ground for broken and damaged goods figuring "Oh, well it's only for display and not for sale." Better by far throw damaged goods on the scrap heap than to place them before the eyes and judgment of the buying public. The story is told of a merchant who made a practice of displaying his damaged goods to such an extent that the public got the idea he dealt only in damaged goods and "seconds" with the result his business was almost ruined.

A Few Simple Points to Watch

After each rainfall the windows should be quickly rubbed over with a damp cloth. At the approach of night be sure to switch on the lights. One merchant makes a habit of turning on the lights each time a dark cloud obscures the sky, in fact at certain times of the day when the sun causes a glare he also switches on the lights, thus counteracting the effect of the sun by interior illumination. In the winter when frost is apt to cover the windows an electric fan kept running day and night is effective. In summer a fan constantly operating will keep the flies on the move and prevent a loss of merchandise, as nothing cheapens a window display as much as speckled and dirty goods. Never make the day time your window-changing period as it blocks the view of your merchandise when people are passing; do this work at night and be ready the next day for business with a fresh display.

The Price Tag

No goods should be shown without a suitable price tag. The necessity of showing a price is especially important in the holiday season. Some "high-grade" stores figure it is beneath their dignity to price goods displayed, but it has been the experience of many retailers that to make the windows a paying proposition they must have the power to attract. The greatest attractions are, first, the goods and then the price. Without tags a person can only guess at the price of goods admired. A price tag is a silent salesman, as often a person will gaze into a window and be attracted to the goods by the price or what is asked for the merchandise.

Coated cardboard is the ideal window

(Continued on page 43.)

PLANNING THE XMAS WINDOW

Practical methods adopted by former prize winners in HARDWARE AND METAL'S *Window Dressing Contest are shown on opposite page. Read the details of the contest below, then plan for your entry and let us have it early.*

HARDWARE AND METAL'S annual Christmas window display contest will be conducted as usual this year. The growing interest evinced by Canadian retail hardwaremen in this contest is evidenced in a wider and more representative response each year.

Two contests will be conducted in accordance with past custom—one for stores in places under 5,000 population; the other for places of 5,000 and over. No restrictions are set on the style of display or the goods used in the arrangement, except that each window must be arranged with goods for the Christmas trade.

ARE YOU GOING TO ENTER?

EIGHT PRIZES WILL BE OFFERED AS FOLLOWS:

Places under 5,000.		Places of 5,000 and Over.	
First Prize	$10.00	First Prize	$10.00
Second Prize	5.00	Second Prize	5.00
Third Prize	3.00	Third Prize	3.00
Fourth Prize	2.00	Fourth Prize	2.00

Contestants will note that an equal number of prizes are offered to the small town trimmer as to those in the larger towns and cities.

The contest closes Tuesday, January 1. No photos received after that date will be entered unless there is proof that they have been delayed in transit.

All matter should be addressed to "The Editor, HARDWARE AND METAL, 143-153 University Avenue, Toronto," and marked "For Christmas Window Contest."

SUGGESTIONS FOR XMAS WINDOW TRIMS

The background was made of wallboard supported by four square pillars. The pillars were finished in white edged with gold. The pillars or supports which form part of the window construction were neatly wrapped with decorated paper. The end of the window, which is an exceptionally long one, was neatly trimmed and decorated with lattice work, pleated materials, etc. Individual shelves or supports were used to display trays, silver tea services, spirit lamps and kettles, etc. The raised section on the floor was arranged in step formation from boxes covered with cheese cloth and decorated with holly garlands.

Color scheme for background and pedestals, cream and maroon. The three uprights are pebbled with alabastine, with frosted snow covering The panels in the back are done in alabastine color. White forms the base and by adding black showcards, the various shades, as shown in the panels, are produced. The two large showcards are made by using combination of wall paper samples. Over 200 price tickets in the same color as the background were used. Summer sporting goods were featured very strongly and the results were exceptionally good.

FOR YOUR OWN USE—TEAR IT OUT

In making the above list HARDWARE AND METAL *has tried to give the retail merchant something which he can use to advantage. May we suggest that you tear this out—paste it neatly on a piece of cardboard, hang it up or place in window where it will attract the attention of those who are uncertain as to what they wish to purchase?*

EDITORIAL COMMENT

EDITORIAL BRIEFS

NOW for the big drive in HARDWARE AND METAL'S Christmas Window Dressing Contest.

* * *

THE prosperity of Canada is well reflected in the splendid response to the Victory Loan. At time of going to press, it is estimated that more than double the amount asked for will be subscribed. $300,000,000 is a tidy little sum for Canada to offer and the boys in the trenches will be proud of the backing thus assured.

CHRISTMAS WINDOW DRESSING

IN promoting the annual Christmas Window Dressing Contest, HARDWARE AND METAL has sought to provide a stimulus to clerks to develop their abilities along what is one of the most important features in the sales program in any retail hardware store. Many merchants may give the shortage of help now existing as an excuse for slighting the dressing of windows. At this time of the year, particularly, such a contention should not be put forward. A well-planned, carefully thought out window display will sell more goods and make the work of yourself and clerks much easier inside.

Our message would be, then, to spend time in planning your window display—the returns will more than justify the time and any expense which may be incurred. When you have the display arranged, have it photographed and entered in HARDWARE AND METAL'S window dressing contest. Suggestions are given and prize-winning windows shown on other pages in this issue; look them over carefully, you may see where your own windows are particularly adapted to a special style of setting which will eclipse all your former efforts. We want to have a photograph of your Christmas windows—it is not too early to plan them now.

CASH BUSINESS GROWING

THE improvement in retail business conditions continues to impress itself very forcibly and is a cause of sincere gratification to all parties concerned in the various phases of the merchandising game.

In discussing the question of credit with one of Toronto's large jobbing institutions, some points were brought out which emphasize the extent to which the retail merchants have put their businesses on a solid foundation.

At the time the war broke out, many merchants were caught with accounts on their books which they found it impossible to collect. The banks had tightened up and many merchants found themselves in a very precarious position. Their bills were coming due and no money was forthcoming from the banks to tide them over and it gave many merchants food for thought which has resulted in their curtailing their credits very largely and doing more cash business.

Terms of credit have been clearly defined which has resulted to-day in this jobber being able to make the following almost startling though gratifying statement: "Almost 80% of our customers are qualifying for the discount of 2% 15 days which we allow and nearly 20% are even paying cash outright receiving a slightly larger discount." There is some satisfaction in being able to conduct a business along those lines—the ring of the cash register is a far more welcome sound when the sale is made than waiting for its possible ringing at some future date. With the prosperity now prevailing in Canada, it should be a good time to inaugurate that strictly cash basis in your store.

THE DEBT OF THE FARMER

A RECENT Bradstreet's weekly trade report notes the tendency on the part of farmers to speculate in the products of their land by holding them for higher prices.

If, as is probable, all men of draft age who are engaged in farm work are released from the operation of the draft, then hoarding by farmers should be a thing of the past. They are being granted special privileges, but these privileges are not granted that the farmer may grow rich. He has a right to a fair profit over costs as in any other occupation, but he is entitled to no more, and he is in debt to the country by so much as he has been spared to serve that country here. It is not a responsibility lifted, but a responsibility merely shifted to other fields that the country, not the individual, may profit the more. Every young man spared to Canada's farms is a debt that the farmers owe to the Empire, a debt that no doubt will be cheerfully paid.

"HOW TO GET THE INFORMATION THE CUSTOMER WANTS"

Fourth Address by Frank Stockdale.

IN THIS *Fourth Lecture, Frank Stockdale, the Advisory Counsellor on business system for the United Advertising Clubs of the World, out of his extensive study of business formulates some ideas for finding out what the purchaser wants to know about the goods, and how this information may be effectively used in building business. This lecture is perhaps the high water mark of the series. Behind every selling argument there is some information. Is this information a help or a hindrance to that sale? This is the question that Mr. Stockdale's address will settle for you.*—EDITOR'S NOTE.

THE securing of information which is generally wanted by the customer either in advertisements or from the sales clerk, and the disseminating of that information in such a manner as to bring maximum results in the sale of merchandise, was the subject matter of Mr. Stockdale's fourth address entitled "How to Get the Information the Customer Wants."

"Who wants to secure this information—the advertising man, the sales person, the travelling salesman, the manufacturer, the window trimmer, the man who displays merchandise in the store? All these want information for the customer," said Mr. Stockdale.

Pointing out that advertising applies to all forms of selling, Mr. Stockdale repeated the statement of L. W. Hill of the Great Northern Railway at the St. Louis Convention of the Associated Advertising Clubs of the World to the effect that "anything desirable is advertisable just as anything desirable is saleable."

"I think we assume too often that the customer does not need any information. That is one of the greatest mistakes. We make it unconsciously but we act as if the customer did not need it. Recently the question came up as to whether coal was advertisable. The suggestion was made that people had begun to think of coal in terms of heat units. People had begun to realize that there are tons of coal and tons of coal, the same as we used to think a margin of 30 per cent. was a margin of 30 per cent. We are gradually getting over all these things. They found a salient thing to advertise about coal. When you buy coal for your residence you buy it for warmth and so there is a chance for people to sell warmth and that is coal satisfaction."

Taking milk for an example, Mr. Stockdale asked if this product was advertisable. He mentioned sanitation, but added that this was only advertising service which goes with the milk. "Is there anything you don't know about milk?" asked Mr. Stockdale, stating that a certain milk company found it worth while to use a whole page in the *Saturday Evening Post* to advertise milk.

"There were just two things advertised about that milk and these two things were that the milk was nourishing and that it was cheap. Milk does the work and it does it at low cost—a good basis for milk advertising. That is the same way to advertise coal, and that is what the "customer wants to know."

Turning to the question as to what kind of information the customer wants, Mr. Stockdale brought to the attention of the gathering a method followed in Gimbel Bros.' store of New York.

"They went down into their trunk department and found they were selling lots of trunks to women. They wanted to find out what women wanted to know about trunks. In too many cases we decide what the customer should know and hand it out to them. You will be surprised when you find what the customer wanted to know about trunks. Ninety per cent. of the buyers wanted to know 'whether the locks were strong.'

"They next wanted to find out what the customer wanted to know about children's suits. Did they ask about the material, or colors? Partly, but the great majority asked 'are they hard to iron?' Every woman who has to do that job considers it a logical question."

Turning to the men's suit department, Mr. Stockdale stated that the majority of customers wanted to know "whether the suits would hold their shape or not."

"It is evident we have to get down to a rather minute analysis," said Mr. Stockdale.

"Talking to customers over the counter we too often use technical terms understood by the trade and not understood by the public. One of the keenest managers of a retail store is Miss Ennis of The Emporium, San Francisco. When she talks about hosiery she calls them stockings, and when she talks about millinery she calls them hats. She gets away from technical expressions and she keeps all her advertising right down to common expressions.

"In silks, the customer buys color and they want it every time," said Mr. Stockdale.

At this point he outlined several points which he regarded as fundamental principles in connection with advertising and selling. These points were as follows:

1. "All selling arguments whether on paper or across the counter should be as simple as can be made instead of bombastic.

2. "They should be as specific as possible instead of generalities.

3. "Should be positive instead of negative. Don't tell them what the merchandise 'is not.' One of the big business men in the U. S. gave me this point and in all his sales talk, no matter how many knockers there are, his advertisements are always absolutely positive.

4. "Get real information into advertising—real facts rather than opinions. Don't tell the customer

what you think of the product but give facts. In selling an article in the store, start your sales talk with the customer's interest, not your own. Start with the 'you' appeal.

Mail order houses certainly have the best retail advertising. They invariably start with the 'you' idea, addressing the customer and emphasize his particular use of the merchandise.

5. "Understate rather than overstate in selling. That is the way to keep merchandise 'sold.'

6. "There are certain things about merchandise that are fundamental. These should be repeated until they stick in people's minds. News may be changed but don't try to find a new fundamental fact.

7. "Real ability is liked by customers. One merchant said 'I believe people like ability in the merchant just as well as in the family physician or the attorney. They like to regard the merchant as an authority on his merchandise.'

8. "Sales talk and advertising should be planned instead of hit-and-miss."

Illustrating some of the foregoing points as regards retail advertising Mr. Stockdale stated that of 200 advertisements which he recently judged in a prize winning contest at the Pacific Coast Advertising Convention, 143 contained the word, "Reduced," either expressed or implied.

"Whether you are selling over the counter or through advertising, if you are selling on this plan your salary is not as large as it might be," said Mr. Stockdale, taking issue with this form of advertising.

"It does not take advertising ability to write 'former price $15.00 now $9.98.' I would say to all people interested in retail advertising as long as that dominates your advertising your position will never be a very high salaried position because it does not take ability to do it."

Illustrating by parallel lines that merchandise and price were on a common plane, Mr. Stockdale stated that the man who makes a success is the man who makes the merchandise look bigger than the price.

"There are two ways of doing this," said Mr. Stockdale, "one is to lower the price and the other is to lift the merchandise. If you are lifting the merchandise in the eyes of the customer, whenever you lift the merchandise you, as a salesman, are rendering a service to that customer. The way to do that is to know the merchandise and the customer. Some people know the merchandise but they don't know the customer."

Illustrating this last point Mr. Stockdale cited the case of a hardware salesman, who, though he had a most detailed knowledge of the manufacture of shotguns, failed to make a sale to a certain customer. The customer eventually bought his gun at a store where the sales talk of the man behind the counter consisted of the statement "shoulder that gun, that will 'get him.'"

"That statement carried him," said Mr. Stockdale, "for it was ducks he wanted and not a detailed knowledge of the gun.

"Let us keep in mind what the customer wants and that will help us in lifting the merchandise. The man who makes the sale has a knowledge of the merchandise and knows his customer as well.

MERCHANT'S OWN EXPERIENCES ARE SOURCE OF INFORMATION

"In getting the information wanted by the customer, the merchant should take into account his own experiences as a customer. He should study the use of goods by himself and his own family. Many times you can get the information by studying manufacturers' literature. Manufacturers in many cases analyse the appeal in their merchandise.

"One rug firm I know found out what the customer wanted to know by getting dealers who handled their product to send in their best advertisements. They selected the best of these and published them in a large book. They had the 'dealer idea' of what the customer wanted to know and in bringing their own experiences in they got a series of advertisements of a high class nature. The advertisements appealed to the use of the customer for rugs in the office and the home and gave information on selecting rugs.

"A manufacturer selling high class candies knows that his best appeal is to people who buy candies for particular purposes. Knowing that the most sales of candy were made to young men for their lady friends, the advertisements of one company run along this line—'this candy is bought to make an impression.'

"The manufacturers who are making a success get that selling angle and are able to give a lot of information the customer wants," said Mr. Stockdale, admonishing the merchants not to throw manufacturers' literature away. "I think there is enough information the customer wants that goes into the waste paper basket to give us all that we want."

The arguments used by travelling salesmen were also mentioned as a source for the retail merchant to secure the information the customer wants. "The travelling salesmen have to put up arguments and they should be used in selling to the customer," said Mr. Stockdale. Making the point that salesmen do not always give this information unless it is specifically asked for, he pointed out two reasons why salesmen do not give this information to merchants.

"One reason is that some salesmen do not care anything about holding the merchant and the other is that the merchant is too busy," said Mr. Stockdale, "to listen to the travelling salesman and get the information."

"I am sorry for that merchant, and when he arrives at that stage a better classification for him is 'storekeeper' instead of 'merchant,' because that is one of the ways he should spend his time. The keen, wide-awake merchants do not let the travelling salesmen go by without treating them courteously and getting the information they have."

At this point Mr. Stockdale mentioned the case of a salesman selling hosiery. On his initial trip he was severely questioned by several employees in one store as to the salient points of the line he carried. He was somewhat "peeved" but on returning found that the store had used the information for a great advertising campaign and had cleaned out their stock so that a larger repeat order was necessary.

Turning to the question of "What your sales people sell," Mr. Stockdale stated that one merchant

goes around and asks his sales people about the selling points of their lines. This action he stated not only unnerved the self-conscious sales clerk who knew no outstanding points about the line handled, but gave no information to the merchant which he should wish to incorporate in advertising.

"A great many advertisers want to say something big and sensational," said Mr. Stockdale, "but the information you want and the customer wants can be secured by getting off to one side when your sales person is handling a 'tough customer.' When the sales person puts that sale over he has used some of the information the customer wants and all you want is to become a good reporter and you have it. Study the customer's objection and then overcome those objections."

Mr. Stockdale here illustrated the case of a salesman for the National Cash Register Company who won for three consecutive years the prize for best salesmanship results at the annual convention of the company in a foreign country. The young man's reply as to how he got the sales was that he studied the customer's objections and never let an objection come up a second time without being able to answer it.

"Study the customer, treat him sociably and mix with him in your home," said Mr. Stockdale. "The making of a point of contact is worth while. Study mail order advertising and find out what the customer wants to know. This form of advertising does not have to bring people to the store, but it has to make people sit down and write orders, get drafts from the bank, mail them and go distances to get their merchandise. We do well if we write advertisements that make people come to our store and look at our merchandise."

Illustrating the specific value of certain mail order advertising Mr. Stockdale mentioned the occasion of a visit to a southern town where he addressed a small gathering of about twenty-five retail merchants. On the impulse to try something new he opened a mail order catalog and turned to an advertisement giving eighteen outstanding reasons why customers should purchase an oil heater. The advertisements carried the "you" appeal and the frosty night carried out the setting. When he finished reading the ad. which made a direct appeal to the customer's use for a heater, Mr. Stockdale asked how many wanted to buy a heater. Two hands went up and five others admitted they were much more interested in heaters than they were when they came to the meeting.

In recommending mail order advertisements as a source of securing information for the customer Mr. Stockdale warned that only mail order houses with long standing should be taken as authority, and that "mushroom growth" houses should be avoided as far as advertisements were concerned.

"Study the goods, the customer and advertising," said Mr. Stockdale, concluding his address, "and the meat is in the middle—get the information the customer wants."

Some very interesting and instructive matter was contained in the answers of Mr. Stockdale to certain questions on retail merchandising submitted in writing during the series of lectures. These questions and answers are reprinted herewith:—

1. (Question)—"Can you explain if there is a science or a rule whereby a sales clerk can recognize the psychological moment when to close a sale and have it remain closed?"

(Reply)—"I have already answered as regards the science and I will answer and say I don't know any rule for closing a sale. In fact I don't know any rule for judging human nature, but there is one thought I would like to make in regard to this matter. I have talked with several salesmen on the subject as to a rule or even a suggestion as to when is the right time to close a sale. When the sales person does all the talking and leaves the customer to stand and listen and do nothing else, there is no definite opportunity of judging, at least by the customer's actions or words, as to what that customer is thinking; and if you have to depend upon looking at a person to determine what they are thinking you have a real job. The suggestion made by several salesmen is that sales people talk too much in making sales as a rule. The hardest customer to sell is the customer that won't say anything. One salesman's strategy is to stop talking himself and just show the merchandise until the customer speaks up. One reason sales people so often overshoot the mark and fail to know when the right closing time comes is because they get under such high pressure. They get running "on high" and it is hard for them to stop when they reach the right point. I would suggest that you make the customer talk if possible if you want to find when to close the sale."

---

2. (Question)—"Do you think business is increased by allowing the customer to make a practice of buying goods to-day, using them and returning next day for refund, the reason being given that the 'goods do not suit'?"

(Answer)—"It is a specific illustration of a store's policy as to whether or not you will allow the customer to take advantage and do what is not honest. It is absolutely not honest on the part of the customer but we find a lot of successful stores that do not base their policy upon the few isolated cases of dishonesty. That applies as well to theft in stores. When I advise merchants to put stock on the counter they do not do it because they think they will lose it, but I have found stores that do so and they have a profit after the customers have taken what they want. If I were a reformer and a customer should take out goods for the purpose of using them and returning them later, I would call that customer on the carpet and tell him what I thought of him. That is if I were a reformer.

"The principle I would like to leave with you in this regard is contained in a very wise saying made by W. H. Wanamaker, who said *"don't sacrifice tomorrow's business for to-day's profits?* If the profit loss is too great you have got to put a check on it. I find merchants' associations and particularly in these times who have put on an educational campaign to get away from this sort of thing.

"The reply of one merchant to this question was 'the customers run my store and I charge them for it.'

"That system is used to a great extent," stated

Mr. Stockdale, who illustrated the point in the following manner:

"One man bought a hay baler and used it for a season, after which he wrote to the mail order house to take it back. The house took it back and investigated the case. They claim that the price of the baler was the best advertising investment they ever made.

"If they are on your side they may be the best advertisement," said Mr. Stockdale, reminding the merchants that "a satisfied customer is the best advertisement."

---

3. Question—"What proportion of increased expense, is, in your opinion, due to the demands made by the consumer for expert service and delivery?"

(Answer)—"I cannot state in percentages what my opinion is but we all know that some of the extra cost of doing business is due not simply to 'expert' service but to the service that is absolutely useless to the customer. We know that the customer in the matter of delivery sometimes will have the merchant deliver when it would not inconvenience them in the least to carry home a package, and they must pay for that service. As long as people are able to pay and they want service that is the thing that gives them satisfaction. When they buy, people buy merchandise satisfaction. As a rule people are wasteful. At the present time there may be a chance to lower that expense. Some stores have cut down their expenses already by eliminating some useless service. As to 'expert' service I don't know that there is much being rendered at the present time."

---

4. (Question)—"Would more forethought and care in ordering lessen materially this expense?"

(Answer)—"In large cities co-operation has eliminated a lot of this expense and it seems that merchants will first have to eliminate the waste which they themselves are responsible for before they can put on a campaign for the customer to eliminate his waste."

Continuing this question the following query was made:—

"And if so what methods of educating the consumer would you suggest. What of the various plans to reduce the price of article carried home by the purchaser?"

(Answer)—"We find that we can eliminate some of the expense especially in the grocery business. It is enough in percentages that you can visualize the reduction in price."

"Is there any method by which the consumer can be made to buy in bulk?" was asked in further continuance of the same question.

(Answer)—"The Housewives' League in New York started out to put on a campaign to buy in bulk and they came up against the question of sanitation and the preservation of merchandise. The League turned over to the other side and are now advocating goods in packages instead of in bulk, the standardization of produce and the amount of the product that you get. These three are important reasons for buying merchandise in packages in some cases at least."

---

5 (Question)—"Would the retail produce dealers be willing to give free fruit in danger of spoiling to groups of women for patriotic purposes?"

(Answer)—"I would say that one of the best places to get that produce perhaps would be at the wholesale distributing station instead of at the retail store," replied Mr. Stockdale, expressing favor with the plan.

Illustrating the point that the profits in a department with twice the turnover of another were practically double the other's profits, Mr. Stockdale placed on the board the following figures:—

In A department, stock is $19,000 and sales $40,000. In B department, stock is $20,000 and sales are $21,000. It is easily seen that the turnover in one department is twice the other. The profit in A department is $4,500, while the profit in B department is $2,700.

In the discussion which followed the address one merchant asked Mr. Stockdale's opinion regarding the "truth in advertising" of overhead clothing stores which advertise "Use elevator and save Ten."

Mr. Stockdale replied that many of the upstairs clothing stores were making a great success. "It is not that you go "upstairs and save ten" but that they give good value for the money and succeed in spite of the fact that their advertising is poor. In New York the advertising of upstairs clothing stores makes the point that good clothes can be obtained for $15. After the advertising was done on that basis—without mentioning the $10,—the plan was enlarged; so while a man may exaggerate in advertising, if the customers are satisfied they may get by with bad advertising. As far as the truth of the assertion "save ten dollars" is concerned, I don't believe it."

Recalling the case mentioned where 143 advertisements of 200 in a contest mentioned the term "reduced," one merchant asked Mr. Stockdale if he would consider the merchant in advertising that way got any benefit from it and whether or not he would encourage him to do it. Also the question was asked as to whether they were really "reduced" goods or not.

"I think most of them were reduced," said Mr. Stockdale. "It proved that they were using advertising mainly to clean up odds and ends. Most of them took cognizance of their reductions."

"They took a chance?" interjected the merchant who made the query.

"Doubtful things are uncertain always," replied Mr. Stockdale.

"My advice to all," said Mr. Stockdale in conclusion, "is that you find actual examples in your own businesses and then start out to get the principle that will help you to dominate the situation. The way to dominate the situation in the merchandise world is to know where your profits are and where they are not.

"There is only one thing that counts and that is ACTION. Study what you believe to be true and put it into practice when you know it to be true."

EVENTS IN THE TRADE

BUSINESS CHANGES

Ottawa and Westboro, Ont.—John Stewart, hardware, is selling out.

INDUSTRIAL NOTES

Levis, Que.—Steel Producers' Export Company has been registered.

The International Sales Co., brokers, handling auto accessories, have moved their office from the London Block, Winnipeg, to 35 Canada Life Bldg., in the same city.

CORRECTION

In the Nov. 17 issue of HARDWARE AND METAL, an item appeared in the New Goods Department regarding lace leather stating that this line was being sold by W. Taylor, Owen Sound, Ont. This is an error as Wm. Taylor is located at Parry Sound, Ont.

ST. JOHN, N.B., NEWS

F. P. Lenehan, formerly employed with the James Robertson Co., is reported killed in action.

Hugh E. Hanlon, employed before enlisting with James McDade, metal worker, is reported wounded.

Private Norman L. Bourne, formerly of wholesale staff of T. McAvity & Sons, was reported this week as having died of wounds. His brother was reported on the following day as missing and probably killed in action.

E. M. Trowern, Dominion Secretary, Retail Merchants' Association, was in St. John this week and conferred with the provincial executive regarding plans for stimulating the work of the association in New Brunswick.

Captain George Keeffe, of office staff of the James Robertson Co., who was invalided home several months ago, has been promoted to rank of major and will command a company in the New Brunswick training depot for drafted men.

Robertson, Foster & Smith, wholesale and retail hardware, suffered the loss of their entire stock in a fire which destroyed their premises on the evening of November 23. The stock was valued at $100,000 and fire insurance was carried to the extent of $70,000. No announcement regarding their plans has been made.

MONTREAL PERSONALS

D. J. Smith, of Smith & Hemenway, New York, was a Montreal visitor this week.

Oneida Community, Oneida, N.Y., was represented in Montreal this week by Mr. Gibson.

James Hossack, of the Lufkin Rule Co., Windsor, was a visitor to Montreal in the interests of his firm.

The Channel Chemical Co. was represented in Montreal this week by Mr. Martin.

WALTER C. TEAGLE

President-elect Standard Oil Co. An announcement of Mr. Teagle's appointment was made in last week's issue of HARDWARE AND METAL.

Mr. Cabana, of the Buffalo Specialty Co., spent part of the week here calling on the trade.

Mr. Isbister, representing Peck, Stow & Wilcox, Southington, Conn., was a Montreal visitor this week.

Mr. Hatch was a Montreal visitor this week in the interests of his firm, the Martin Manufacturing Co. of Whitby.

Mr. Notman, representative of the McKinnon Dash and Chain Co., St. Catherines, called this week on the Montreal trade.

OFFICERS ELECTED

At the Varnish Manufacturers' Convention held recently in Chicago the following officers were elected for the coming year:

President, Jas. B. Lord of the Boston Varnish Co.

1st Vice-President, Arthur Davis of the Standard Varnish Co.

2nd Vice-President, Carl J. Schumann of Moller and Schumann.

Secretary and Treasurer, Geo. B. Heckel.

Directors, O. S. Goan, of Berry Bros.; J. H. McNutty, of Pratt & Lambert; Franklin Murphy, Jr., of Murphy Varnish Co.; P. H. Callahan, of the Louisville Varnish Co.; A. C. Morgan of the Chicago Varnish Co.; Fred A. Glidden, of the Glidden Varnish Co.

GERALD SIMPSON DEAD

Dean of G. F. Stephens Co. Ltd. Travelling Staff Passes Away After Several Months' Illness—Called on the Retail Trade for Eighteen Years.

Hardware dealers of Western Canada, particularly of Manitoba and Saskatchewan, will regret to learn of the death of Gerald J. Simpson, of the travelling staff of G. F. Stephens Co., Ltd., paint manufacturers, Winnipeg. Mr. Simpson passed away on Saturday, November 17, after an illness lasting several months. He had not been feeling well since spring, but had only been off the road about four months.

Gerald Simpson was born at Sault Ste. Marie, Ont., fifty-two years ago. He was a son of the late Chief Factor Simpson of the Hudson's Bay Co. His father was first representative of Algoma in the Canadian Parliament, and afterwards filled several important positions under the Government, being the first Indian Commissioner to Manitoba and the Western Provinces.

Gerald Simpson came to Winnipeg in 1882. He joined the travelling staff of G. F. Stephens Co., Ltd., eighteen years ago, covering Southern Manitoba, and later Northern Manitoba and part of Saskatchewan. The whole eighteen years, except for a short interval, was spent in these two territories. In that time he has seen vast changes take place in Western Canada, and was known by hardware dealers all over Western Canada. Writing in the Stephens Paint News in the December, 1912, issue, Godfrey Darling, formerly advertising manager, speaking of Mr. Simpson, said: "He is industrious, confident, teeming with restless energy, and is always on the job."

Gerald Simpson was a well-known sportsman, having won many snowshoe and foot races. He was also fond of hunting, fishing and boating. His wife was formerly Miss Annie Bannatyne, daughter of the late Hon. A. G. B. Bannatyne, one of the first free traders and townsite owners of Winnipeg.

Besides his widow Mr. Simpson leaves behind five sons and one daughter, the eldest son being with the Canadian forces in France.

THE CHRISTMAS WINDOW DISPLAY

(Continued from page 34.)

tag, and a change of color is advocated. One week use white, next a tint and in summer use a black card with white letters as this keeps clean the longest. It matters not what color ink is used so long as the sign is readable and to the point. Abstain from the so-called "comic" signs such as "Take me home for $4" or "Use Bink's pills and never be ill." All persons will not have the same idea of humor as you.

Use Stands for the Cards—Not Pins or String

Use a neat stand to display your large cards and "bulldogs" for the small ones. Never use a pin or a piece of string to attach a ticket to the merchandise as both cheapen the display and ruin the card. It is better to invest a few dollars in suitable fasteners than to ruin many dollars' worth of cardboard year after year. A letter file may be used to advantage in storing unused signs; thus they are classified for future use.

When a card is soiled it should be thrown away for it never pays to use a card which has become dirty; it loses sales and gives the store a cheap appearance. In most every store will be found a young man with a knack for lettering. If you have no such person, select a clerk and let him read some good material on card writing such as appears in the trade newspapers. It will pay you to invest a few dollars along these lines for the convenience of a man on the premises who can letter is of great value and saves much time. The card writer who makes a business of doing rush jobs is seldom a good workman.

Don't Crowd the Windows

There is oftentimes a tendency on the part of retailers to do either one of two things in regard to window dressing. They will either sacrifice the selling value of their windows entirely or crowd them to a point where the display is worth little or nothing. Once again the merchant should put himself in the position of the person on the street. There is no attraction in the window where the goods are piled helter skelter and packed up against the front with about the same care displayed as when you throw corn in a bin.

The window is one of the best salesmen in the store, and, particularly when a store front offers two roomy, attractive, and well-lighted windows, it is little short of a merchandising crime to sacrifice them through negligence, carelessness or any other phase of mismanagement. A window well trimmed is an example of the same business acumen which induces the peddler selling produce to put the better and more attractive part of his stock on the top of the basket. The practical dealer selects the more attractive part of his stock, both as regards price and quality, and puts it in his windows. It will pay you, especially during the Christmas holiday season, to regard your windows as one of your most efficient salesmen.

Letter from Association President

Asks For Suggestions on Conduct of Next Association Meeting—Benefits to be Derived From Earnest Co-operation.

Editor HARDWARE AND METAL,
Toronto, Ont.

After the Convention of Ontario Retail Hardware & Stove Dealers' Association, held in Hamilton last year, an excellent editorial appeared in HARDWARE AND METAL, dealing with the methods of the association, and its failure to accomplish the purposes for which it was intended.

This article brought out some excellent letters suggesting methods that could be employed which would make our association of much more practical benefit than it heretofore has been to its members. As President of this organization, and backed by its executive, I addressed a letter through HARDWARE AND METAL to the hardware men requesting suggestions, whereby our organization could be strengthened, as the sole aim of its officers should, and is, to make it of such real practical value that no hardware man can afford to be outside the pale of its membership.

In less than three months we will again meet, let us have an unstinted expression of what would make a genuinely successful meeting.

I remain,

Sincerely yours,
JAS. N. McGREGOR,
President, Ontario Retail Hardware & Stove Dealers' Association.

EDITOR'S NOTE.—*The above letter from President McGregor refers to* HARDWARE AND METAL'S *criticisms, last March, of the manner in which the affairs of the Ontario Retail Hardware and Stove Dealers' Association were being conducted. Our criticisms at that time were solely for the purpose of stirring up renewed interest in the Association and with the idea of assisting to build up a bigger and better Association. At that time many excellent suggestions were offered by members for the betterment of the Association.* HARDWARE AND METAL *is again willing to throw open its columns for a further discussion. Members are requested to send in suggestions. Letters will be published and names withheld if so desired. Now is the time to start preparations for the next convention. There should be a hearty response to the President's request.*

Christmas Specialties Should Shine Forth

Merchants should require no reminder to see that any merchandise peculiar to the Christmas season is exclusively brought before the public eye at this period of the year. Each class of store has its distinctive line of goods which receive special attention for Christmas trade and no time should be lost in working these into advertising and window displays. It is not too early to commence this practice right away and results will soon be forthcoming. Quantities of Christmas gifts are purchased weeks before the heralded day arrives, and quantities of food supplies are bought in weeks ahead in order that special Christmas delicacies may be made up in advance.

Every store has some special lines of merchandise to be pushed, and these should be made the feature of window and other kinds of advertising. The foregoing paragraphs outline some of the most outstanding pitfalls to be avoided and should be of value to the merchant in arranging his window displays. The chief points to be watched are seasonableness, cleanliness, tendency to overcrowd, necessity of price tags, keeping windows open at night, and commencing to display Christmas goods early.

$50,000 FIRE IN PARIS

The Alabastine Company of Paris, Ont., suffered fire loss to the extent of about $50,000. When the fire was discovered in the warehouse for storage of raw materials the flames had secured such a hold on the building that within one hour the range of buildings was doomed. These comprised a large frame warehouse and storeroom 100 by 50 feet, a two-storey brick building 100 feet square, as also several small warerooms. The loss is partially covered by insurance. The manager, R. E. Haire, stated that the company will rebuild at once, and that the fire will not interfere with the firm's spring orders, as these will be filled from its other mills.

INDUSTRIAL BY-LAW CARRIED

The ratepayers of Whitby, on Monday, carried by a vote of 341 to 41 a by-law to loan $25,000 to the United Rubber Manufacturing & Reclaiming Co. of Toronto. The company is to immediately begin work on its plant here, and hopes to produce its own 1918 output of tires.

Motor Trucks to Relieve Freight Congestion

Highways Transport Committee Formed to Work Out System of Short Haul Motor Truck Lines—Curtailment of Non-essential Industries—Fuel Situation.

IN order to reduce the great freight congestion the Council of National Defense has named a Highways Transport Committee under Roy D. Chapin of the Hudson Company. This committee will work out a system of short haul motor trucks lines to carry freight into terminal points. A transcontinental route is also being mapped out and 10,000 motor trucks to be manufactured in the middle west for use in France will be brought overland, with cargoes, to the seacoast.

Curtailment of Non-Essential Industries

Great unrest has been caused in the manufacturing circles of the United States by reports of governmental curtailment of non-essential industries. In order to set the minds of manufacturers at rest, Judge Robert S. Lovett of the Priority Board has issued formal notice that he does not at the present time contemplate any further issuance of priority orders with respect to transportation facilities for non-essentials. It is known that the curtailment of non-essentials will be practiced by the Government by cutting off supplies of coal and raw materials. This curtailment will be gradual however, and there will be no general order issued against non-essential industries. Factories making non-war goods will be dealt with individually and will be given an opportunity for a hearing before action is taken against them.

Fuel Situation

The United States Fuel Administration has lifted the priority order given to coal for the Great Lakes and Northwest, effective Nov. 30. It is maintained that there is sufficient supply in these districts now and that the New England territory must be taken care of. The Fuel Administration has set the following prices for coke:—By-product coke, run of ovens, $6 a ton; selected foundry, $7; crushed over 1-inch size, $6.50. The maximum price fixed for gas coke shall be the same as the maximum price fixed for anthracite coal in the same locality.

Conservation of Labor

The Ordnance Bureau of the War Department has issued a long statement to munitions manufacturers working on Government contracts calling upon them to safeguard labor in all possible ways. The eight hour day is suggested, with time and one half for overtime, and half holidays on Saturdays. It is urged that every possible means be taken in order to maintain high standards of labor conditions and particular instructions are given for the protection of women in the war industries.

Daniel Willard, president of the Baltimore and Ohio railroad, has been named as chairman of the War Industries Board, succeeding Frank A. Scott, resigned. Willard is also a member of the Advisory Commission of the Council of National Defense and chairman of the committee on railroads of the Council. He is looked upon by manufacturers as a strong advocate of stern war measures. In public addresses he has expressed his opinion that all else must be subjugated to victory in the war, and for this reason leaders in war industries look for strict governmental supervision in the future.

Reorganization of U. S. Shipping Board

The United States Shipping Board has now passed through its second reorganization. Rear Admiral W. L. Capps, general manager of the Emergency Fleet Corporation, has asked to be relieved of all duty on account of ill health. Rear Admiral A. W. Bowles, who has been assistant to Admiral Capps, will undoubtedly leave the Shipping Board. Charles A. Piez as vice-president of the Emergency Fleet Corporation has been given full authority by the members of the Shipping Board.

Admiral Capps has rendered a great service to the shipping programme of the United States. After the removal of General George Goethals as manager of the Fleet Corporation, Admiral Capps took up the work and really started the programme on its way. His hard labor at that time has broken down his health and made him unable to keep pace with the rapid movements, hence the appointment of Piez and the gradual loss of power by Capps.

Construction in 1918

Chairman Hurley of the Shipping Board has denied that the Board has promised 6,000,000 tons of ship construction during 1918. "We will do everything possible of course," Mr. Hurley declares, "but I will make no promise at this time." He announced that up to the present time 159,299 tons of bottoms under construction for foreign owners on American ways have been completed and commandeered by the Shipping Board. The first steel vessel of the new construction programme was launched November 24 at the Skinner-Eddy yards in Seattle, Wash.

To man the vessels of the United States Shipping Board a recruiting campaign has been set under way. One hundred thousand men are needed.

The Interstate Commerce Commission has set December 7 as the date when the four large American express companies will be given a hearing on their petition for a general increase of ten per cent. on all rates. These increases also include the rates between the United States and Canada.

Prosperity Reigns in British Columbia

Fruit and Grains Reap Good Returns—Shipbuilding Industry Flourishing—Active Production of Basic Metal.

H. B. MORLEY of Penticton, B.C., who has been in the hardware business for upwards of 25 years in various capacities, has taken over the hardware department of W. R. King & Company of Penticton and will conduct it as a hardware business under the name of H. B. Morley & Company. For many years Mr. Morley travelled for the Kemp Manufacturing Company, now the Sheet Metal Products Company of Toronto. Later Mr. Morley was connected with Tisdall's Ltd., sporting goods, of Vancouver.

Speaking of conditions in British Columbia, Mr. Morley states that general business is healthier than in many years past. Money spent now is money which has been earned and is not speculative money. There is a greater volume of retail business being conducted on a cash basis than ever before and owing to the prosperous conditions the public have cash to spend. There is very little building going on but there is a boom in shipbuilding and lumbering which is only limited by the scarcity of men. All available men are very busy and present indications are that both of these industries will be very busy for years to come. In the interior of the province the fruit crop has been an excellent one and high prices have been secured. In the parts of the province where grain is grown there has been a fair yield and farmers have secured high prices. Their chief difficulty has also been a lack of men.

Mr. Morley is of the opinion that after the war British Columbia will go ahead with less readjustment than the other provinces. Business was dead in the province for 1½ years after the war for there was no production of war supplies. Since then shipbuilding has been stimulated and Mr. Morley is of the opinion that they will not be able to cope with the demand for at least ten years. There is a good sale for more lumber than can be possibly produced and sufficient bottoms cannot be secured to carry the lumber which is required in other lands.

The production of copper, lead, zinc, silver and gold is active and good prices have been secured for all basic metals. The pulp and paper mills which have been started in British Columbia are busy at present and are securing high prices for their products. There is very little munition work being done in B.C. and most of the industries are now busy on regular products. After a conversation with a C.P.R. official Mr. Morley states that last year shipments of fruit were 25 per cent. over those of the previous year and that this year there was an increase of 25 per cent. over last year. High prices were secured for all fruits.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

THE LIBERTY CULTIVATOR-WEEDER

The J. E. Gilson Co. of Port Washington, Wis., have placed on the market a new garden tool called the Liberty Cultivator-Weeder. While containing many points of similarity to other garden tools, it is intimated that the cultivator teeth are so arranged that they will cut all of the weeds during its operation. This, it is stated, means double efficiency and eliminates the necessity of cutting the weeds and cultivating in two separate operations. The Liberty Cultivator-Weeder is also adjustable for any width of rows, the minimum width being 4 in., the maximum 10 in. The adjustment is made by simply loosening the two wing nuts, moving the side arms to the desired width and tightening them again. To straddle the plants for cultivating two rows at a time the middle front tooth can be quickly detached.

The Liberty Cultivator-Weeder.

The extra long handle provided and the special design of the teeth make the operation of the tool very easy. No downward pressure on the handle is required.

The teeth are malleable iron with hardened and sharpened cutting edge.

Two other styles of weeders are being sold by this firm. The Gilson which has a double-edged oscillating steel blade, will, it is claimed, cut both ways under the soil surface, destroying weeds and loosening the earth; it will also do the work of a rake. The handle is 6 feet long and there are four widths of blade, 3½, 5, 6 and 8 inches.

The Gilson Weeder.

The 5-point Scratch Weeder.

The other Gilson garden tool is the Scratch Weeder, made in two sizes, for fine work in beds or for greenhouse work. It is claimed that the pointed tines of the Scratch Weeder are self-cleaning and will not clog in moist earth. This is a thoroughly practical and strongly-made little tool for close work. The five point weeder has 6 inch handle, the seven point is supplied with 14 inch handle.

ELECTRIC LIGHTED PATRIOTIC BUTTON

A new patriotic novelty recently placed on the market by Speilmann Agencies Reg., Read Bldg., Montreal, consists of an electric lighted lapel button, showing the Union Jack. Connection is made to a battery worn in the vest pocket. This line retails at 75c and particulars will be furnished to anyone interested.

THE PANTAPHONE

The Pantaphone is the name adopted by the Canadian Phonograph and Sapphire Disc Co. of Winnipeg as a distinguishing factor in the sale of the talking machines which they are now marketing.

It is claimed the Pantaphone will play every make of disc record and that it has no superior in quality of tone, construction or appearance. It is being sold by mail through the dealers—no travellers are employed.

The Pantaphone.

THE NEW CHAMPION PRIMING PLUG

Every motorist who has not the good fortune or the convenience of a heated garage experiences quite often a lot of trouble and delay in starting his cold motor. To overcome this trouble, the Champion Spark Plug Co. of Toledo, Ohio, have placed on the market the new Champion Priming Plug which has a side valve, and is so made that, it is claimed, it gets the gasoline down into the cylinder, right where it is needed to catch the spark and set the motor humming.

The New Champion Priming Plug.

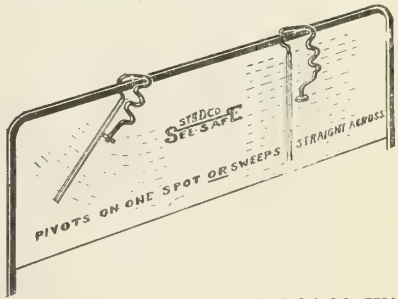
Champion Priming Plugs will, it is claimed, eliminate the motor car owner's starting troubles, except one turn of the crank. They help to make cold weather driving a great deal more comfortable and convenient.

It is stated that with the priming plug it is possible for a driver to stop his motor when he stops his car, instead of keeping it running to keep it warm, thus effecting a big saving in gasoline.

The Champion people place an absolute guarantee behind their priming plugs.

STADCO SEE-SAFE WINDSHIELD WIPER

The Stadeker Metal Specialty Co., 19 So. Fifth Ave., Chicago, are placing on the market the Stadco See-Safe Windshield Wiper. It is stated that although simple in construction the Stadco See-Safe thoroughly cleans the windshield.



The Stadco See-Safe Windshield Wiper Attached.

Steel Industry Facing Crisis

Operating Difficulties Multiplying — Canadian Firms Getting Orders—Pig Tin Establishes High Price Record—Prices Fixed Being Slowly Established—The Labor Supply.

LATEST advices concerning the iron and steel industries in the United States indicate that operating difficulties are reaching the acute stage. It is intimated that, unless effective remedial measures are applied at once, production, which has already suffered alarmingly, must be curtailed to an even greater extent. The main cause of the present serious outlook lies in the coal and coke situation. In another week or two under existing conditions it is considered more than probable that many merchant and independent steel works must join the already large list of idle stocks.

The question of transportation is also serious and in spite of drastic freight embargoes which have been imposed congestion exists to a very large degree. With the coming of winter weather, the present serious situation would seem to have no immediate prospect of complete relief.

Pig iron inquiries have become so numerous that they are becoming exceedingly difficult to satisfy. The usual sources of supply are of no avail and buyers are being forced to find new fields to take care of their iron requirements.

Shell Steel Orders Being Placed

The Government is now allotting orders for 1,500,000 tons of shell steel and it is intimated half of this amount is for 6-inch shells alone. This does not cover requisitions yet to come for Great Britain and France. Deliveries on orders now being placed must be completed by June 15.

Canadian Firms Getting Orders

Structural steel orders continue to flow in increasing volume and one of the latest developments is the placing of 50,000 tons of ship work with a Canadian firm. This order is part of a total of 45,000 tons to be delivered monthly at Philadelphia.

Auto Steel Embargo Proceedings

The automobile industries committee has succeeded in having the original embargo of the War Industries Board, which cut off entirely shipment of chrome steel for the manufacture of pleasure automobiles, modified until they can submit a report as to the minimum amount the industry should be allowed. Twenty per cent. of the present consumption is the cut aimed at by the War Industries Board but this may be reached gradually.

The November movement of Lake Superior ore has been much greater than usual and it is believed the season's total will reach 62.000.000 tons (as against 64,734,000 tons moved by water last year) and it is hoped this will carry the industry through until the arrival of new ore in the season of 1918.

Pig Tin Establishes High Price Record

The limitations of British permits to actual consumers has resulted in a scramble of the small trade for what little available stock there is, with the result that pig tin has made a new high price record of 80c.

Prices Fixed Being Slowly Established

Efforts are being made by manufacturers to get the mills to modify the high prices prevailing on old contracts.

Although price-fixing began two months ago, marked results are scarcely noticeable as yet, but it is intimated that the adjustment to the lower level is proceeding favorably. Widespread acceptance of the prices on sheets and plates is a notable feature, this being as much as $50 per ton on sheets and $70 on plates. Sheets have sold more freely to the general trade than any other finished product since official prices came in. The mills are well filled for the year and good sales are reported for the first quarter of 1918. 20,000 tons, largely blue annealed, have been placed by the Government.

Commercial Consumption Not Affected

It might be added that the maximum prices set are considered fair. The point is again being emphasized that the maximum prices set apply only to business being done with the government, its allies and domestic consumers. The commercial consumption in which the Canadian hardwareman is interested will not be affected.

The Labor Supply

The labor supply though somewhat improved will be affected by the second draft. The urgent demands of the Government for skilled labor will result in thousands of mechanics seeing service in France. Common labor on a 10-hour day is being offered as high as $3.85 at Pittsburg.

PERSONAL

D. E. Birch, formerly in the retail trade at Roland, Man., has joined the travelling staff of G. F. Stephens Co., Ltd., Winnipeg.

How To Save Coal

Governor Whitman of New York Urges Conservation—Ways of Saving Outlined, a Matter of Importance to All.

ON several occasions since the war broke out Governor Whitman of New York State has sought advice, by conference, with the editors of leading trade and technical papers on important business, manufacturing and economic problems.

Recently at his request a committee of editors of technical papers prepared a list of suggestions to manufacturers and business men and the public generally on the saving of coal. The Governor pointed out that the production of anthracite and bituminous coal would doubtless be greater than ever before, but on the other hand the consumption far exceeds the requirements of past periods, and he insists that the American people can avoid distressful conditions this winter only by exercising the greatest care and intelligence in the use of coal. The following are the suggestions which the committee prepared for the Governor.

Suggestions to Public.

The suggestions which the committee requested the Governor to make public follow:

Don't burn coal in an open grate, for in such a practice 75 per cent. or more of the heat goes up the chimney.

It isn't necessary to have every room heated. Most people would be healthier if they slept in cold bedrooms. Close off spare rooms.

Examine furnace and see that there are no cracks at floor line to permit air leakage into the ash pit. Make sure that all firing, ash pit and cleanout doors are airtight when closed.

Endeavor to keep the entire fuel space of your range or furnace filled, heaping the coal slightly in the centre. Steam or hot water boilers should be filled so that the coal is level with the bottom of the feed door opening. Don't let the fuel bed burn down too low. Thin fires mean waste. Break lumps to about egg size.

Frequent Feeding Wasteful

Feed the fire and shake the grate at regular intervals. Two or three times daily is generally sufficient unless the plant is inadequate for the service required. Frequent feeding and shaking are uneconomical. Shake down the ashes before adding fresh coal and stop shaking the moment the first bright spot appears under the grate. In mild weather let some ashes accumulate on top of the grate; in severe weather have only a very thin layer of ashes on it.

If, however, the fire has burned very low and more heat is desired open damper in the ashpit and add a small quantity of coal. In this particular case do not shake the grate until this fresh coal is well ignited, then shake down the ashes and again add fuel.

Don't leave feed door draughts open and admit cold air over a glowing fuel bed at any time. The feed door damper should be opened only to admit air over

(Continued on page 60.)

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

CHANGES in hardware lines have been quite numerous during the week, the majority of which have been in lines more closely associated with the automobile accessory business. In the majority of instances the movement has been in an upward direction, although quite a considerable number have been movements toward lower levels. Among the lines to show advances are window glass, well wheels, food choppers, grease and oil cups, cotter pin extractors, pliers, tire gauges and oil gauges, pump tubing, floor push buttons, lamp fittings, acetylene gas tanks, side and tail lamps, coopers' tools, box scrapers and pulley sheaves, gas globes, soldering sets, upholstery nails, bicycle cyclometers, bicycle bells and lamps. Among the lines to show reductions are valve grinders, tinners' snips, double-end wrenches, socket wrenches, electric heaters, hose clamps, pipe wrenches, dash and trouble lamps.

Business with wholesale hardware houses continues good. Merchants quite generally are pressing for shipments, indicating that the demand for seasonable lines is fairly heavy in the country. Manufacturers are quite generally accepting business for shipment during the first half of 1918 under stipulation that such shipments are contingent on being able to supply in the period specified. At a certain date to be specified should orders not be completed the manufacturers reserve the right to cancel the balance of order remaining unshipped. Wholesalers assert this is going to place them in an awkward position as they have already taken orders from their customers in good faith. Conditions are abnormal and jobbers and merchants will have to accept the inevitable. It becomes important therefore that merchants who are in a position to take deliveries early in the year should do so as they will then have better chance of having goods when the season of demand comes.

MONTREAL MARKETS

MONTREAL, Nov. 28.—The good sleighing here and the moderately cold weather has had the effect of stimulating the hardware business very materially. Jobbers and manufacturers are well pleased with the volume of the sorting business and there is a real active demand for holiday lines in particular. Sleighs have sold well and repeat orders are being received for a good many seasonable lines such as skates, hockey sticks, cutlery, silverware, etc. If this wintery weather continues it will be most desirable and will serve to maintain the good buying spirit of the public. From the country, as well, very good orders are received. Farmers always appreciate the ease with which they can get to town when snow comes and this fact is evidencing itself in this district. Notwithstanding the high prices for cutlery, there is a good demand and in this a good deal of imported American lines is figuring prominently, while some lines of English cutlery are going out. One large jobber has found much difficulty in securing his wants of half round files. The workmen do not like to make them as it is more difficult than in the manufacture of the flat styles, and with the shortage of labor prevailing, manufacturers cannot dictate to them. Orders for these lines placed over a year ago are still unfilled. Altogether, there is a satisfactory condition as applying to orders for shipment after the first of January and later.

Better Demand Prevails For Holiday Hardware

Montreal.

SHELF AND HEAVY GOODS. — The demand for shelf and heavy goods is very satisfactory for this season of the year. All jobbers are very pleased with the conditions, improvement in demand being in evidence since the snow came. Locally, at least, this permits of a ready movement of goods around the city and sleighs are in general use. From outside also comes a satisfactory volume of business for lines wanted for the Christmas trade. Few price changes are recorded in shelf goods. Sleigh bells, sleighs, robes, horse blankets and cutlery have been asked for freely, and in the matter of cutlery the higher prices do not seem to have greatly affected the demand. Much of what is sold, is that imported from the United States.

Some Bookings Made For Standard Wire Nails

Montreal.

WIRE NAILS AND WIRE. — Some nice orders are being received for wire nails by one jobber here, and these are for delivery after the first of the year. Last week we reported that there was little tendency as yet to book for spring and there still seems to be little interest from many quarters. What bookings are received are at open prices, for the manufacturers have not yet named definite prices. They are expected to give these out to the jobbers any time now. No downward tendency is probable and it is presumed that in view of general conditions bookings will be received in greater volume from now on. Booking prices are usually announced by the manufacturers not later than November 1, but with the conditions prevailing it is not to be wondered at that these are late this year. No changes have been made within the week, cut nails selling at $5.75 per keg base, wire nails $5.50 base, while smooth steel wire is still selling at $6.50 base per 100 lbs.

Shipments Of Iron Pipe Are Of Small Volume

Montreal.

IRON PIPE.—Little interest is manifested in pipe, which is holding firm but unchanged. There continues to be a fair request for some sizes. None are buying in big quantities but stocks are kept well sorted where any demand exists among retailers. It is generally felt that in such a line as this the request for supplies will be light for the next few weeks. Stocks in hand here are fair and most sizes are obtainable by the retail trade.

Little Norway Iron Here; Iron, Steel Demand Fair

Montreal.

IRON AND STEEL.—There is just a fair demand for iron and steel this week and for the usual sizes. Occasionally there is a request for an odd size and where these orders are received a delay is necessary and the order must wait on the rolling mills until that size is being produced. There is a fair stock in hand but the rolling mills state that this is no more than normal. Navigation has closed for the season, at least so far as the deliveries to river and canal points are concerned, and as a consequence some lesser demand on stocks is being made from such places.

MONTREAL—

Common bar iron, per 100 lbs.	$ 4 55
Refined iron, per 100 lbs.	4 80
Horseshoe iron, per 100 lbs.	4 80
Norway iron	11 00
Mild steel	5 05
Band steel	5 05

Tire steel	5 25
Toe calk steel, per 100 lbs.	5 95
Mining tool steel, per lb.	0.17½-0 19
Black Diamond tool steel, per lb.	0 18-0 19
Spring steel	6 50
Single reeled machinery steel	6 50
Iron finish machinery steel	5 10
Harrow tooth steel	5 20
Black Diamond cast steel, lb.	0 18-0 19

Demand For Black And Galvanized Sheets Fair

Montreal.

SHEETS AND PLATES.—A firm tone rules the market in black sheets and in galvanized as well. Stocks continue to be very light on heavier gauges and importers are anxiously hoping that there may be some redress regarding supplies ere long. Unfavorable conditions will be prevalent, however, for some months, it is expected and care must be exercised everywhere to use all materials with every consideration being given the situation as created through the war. It is to be assumed that small users and large alike are now fully aware of the need of doing this.

MONTREAL—

BLACK SHEETS—		100 lbs.
10 gauge		$12 50
12 gauge		11 60
14 gauge		11 50
16 gauge		10 75

GALVANIZED SHEETS—		
10¾ oz		11 05
24 gauge		10 45
22 gauge		10 45
20 gauge		10 30
18 gauge		10 15

Normal Business In Stoves, Ranges, Heaters

Montreal.

STOVES.—Very good business for this season of the year is coming to hand and deliveries of heaters are well made. The range and stove business is not heavy, but there is a fair demand, considering that the season is well advanced and that dealers have long since received their usual winter stocks. While the scarcity of materials has been a factor with makers, they report that the business accorded them has been handled in a satisfactory manner and this is doubtless a satisfaction to them and to their dealer friends. No new quotations are being made, but prices are holding firm.

Cold Weather Affects Sales Of Gasoline

Montreal.

GASOLINE AND COAL OIL.—The weather of the past week has certainly had a real effect on the amount of gasoline being used and a consequent reduction in consumption is the result. Snow falls occasionally and it would seem to be here for the next several months. Coal oil sells well and for this there is the usual normal demand from all parts of the country. There have been no changes recorded from last week, in prices, and these are firm with Palacine selling at 20c Electroline 20c and Royalite 17c. Gasoline is selling at 32½c gallon.

ADVISES MODERATE PRICE.

One of the manufacturers of galvanized sheets has recently sent the following information to the trade anent the situation in galvanized sheets:

"It is not generally known that the U.S. Government has fixed a resale price for sheets sold from jobbers in U.S.

"This fixed price allows the following advance over their costs:

Black sheets .....$25.00 per ton
Blue annealed sheets.... 20.00 per ton
Galvanized sheets ..... 25.00 per ton

"We would suggest that Canadian jobbers maintain a moderate price to the trade, for mills are asking a premium of $20 per ton for their galvanized sheets from Canadian buyers. After adding this premium and adding the $25 as enforced in the U.S., you will have a price which is fair to all concerned.

"To sell for any less would certainly be an exhibition of poor judgment, in view of the very evident lack of supply for first half 1918.

"We do not have a single pound available for sale for first half delivery, hence have no object, except the general good of all who make, sell, or use galvanized sheets in Canada.

"In our estimation any price to the trade in excess of $10 base per 100 lbs., No. 28 U.S., at Hamilton (after adding cost of freight and cartage) is an excessive price, and should be discouraged."

Prices Are Announced On Black Wire Cloth

Montreal.

BLACK WIRE CLOTH.—The new prices have been announced on black wire cloth and it is quite probable that travellers will be taking bookings for the coming season now that the price is fixed. At Montreal the price per 100 foot roll is $3 per 100 square feet. Doubtless the dealers will be also placing some new business for screen doors and windows, as many order these as soon as the prices are obtainable for wire cloth.

Meat Choppers Have Advanced About 10%

Montreal.

FOOD CHOPPERS.—An advance is recorded this week in the price of Universal meat choppers and this makes prices of the various sizes as follows at Montreal:—No. 0, $15.20 per dozen; No. 1, $18.80; No. 2, $23.95 and No. 3, $30.35. There will be a good demand for these for holiday trade, although the prices for food choppers of various kinds have reached high levels.

Scarcity Of Rope Material Becoming Acute

Montreal.

ROPE AND CORDAGE.—With an uncertain situation with respect to raw materials confronting rope manufacturers throughout the country, the immediate future as relating to prices is decidedly uncertain. Owing to the impossibility of getting Russian hemp and in view of the fact that Italian hemp is just about as scarce as Russian, a very firm situation exists. Some supplies have come through of Manila hemp and deliveries have been made of Mexico flax. Altogether, the situation is fraught with uncertainties. Trade is quite limited and prices hold firm but unchanged.

Lead Sheets, Traps, Hold Firm; Demand Small

Montreal.

LEAD PRODUCTS.—There is very little demand for lead products here except in some sorting business. Late work is being finished up now and there is the usual demand for lines of traps, bends, lead waste and other items, in a small sorting way. Prices hold firm and unchanged as follows:

MONTREAL—

Lead pipe, lb.	$0.15
Lead waste pipe, lb.	0.16
Lead traps and bends	10% on list
Lead wool, lb.	0.15
Lead sheets, 3 lbs. sq. ft.	0.13¾
Lead sheets, 3½ lbs. sq. ft.	0.13¾
Lead sheets, 4 to 6 lbs. sq. ft.	0.14

Old Materials Slow; Tendency Is Weaker

Montreal.

OLD MATERIALS.—Very little demand is reported for old materials as yet and the market is rather weak. There is a weakness in the price of old cast iron which is quoted as low as $22 per gross ton. Old rubbers are weak at from 7½c to 8c lb. Auto tires are also lower and prices range from 4½c to 5½c. Old copper and brass are unchanged and the movement of these is slow. Some sales are reported of cast and wrought iron, although the quantities are rather limited.

MONTREAL—

Tea lead	$ 0 04	....
Heavy lead pipe	0 05	....
Yellow brass	0 14	....
Red brass	0 20	0 21
Light brass	0 08	....
Scrap zinc	0 06	....
Heavy copper	0 22	....
Old cast iron, per gross ton	22 00	25 00
Wrought iron, No. 1, per gr. ton	22 00	23 00
Heavy melting steel	20 00	....
Pipe scrap	15 00	17 00
Stove plate, per ton	15 00	17 00
Old rubbers, boots and shoes	0 07½	0 08
Overshoes, lumbermen's rubbers boots	0 06	....
Bicycle tires	0 03	....
Auto tires	0 04½	0 05½

Lead Trading Better; All Lines Hold Firmly

Montreal.

INGOT METALS.—There is a movement in the United States to work out an arrangement for the control and regulation of tin supplies, but details are still to be fixed. When this is done it is expected to make a more settled condition and to do away with the feverishness that has existed for some weeks. Locally there is little change in demand except that some improvement is noted with regard to lead, which has been asked for somewhat more freely. Generally speaking, the ingot market has settled down to a very quiet basis.

COPPER.—Matters relative to the copper situation in the United States are very interesting, and it would seem that the governmental regulation and price-fixing, with the consequent delays in making deliveries, has worked some hardship on smaller dealers because of delays. It is evident that at the present time no copper is available at the set price of $23.50, and that it will be January before this may be had at the government's price. The effect here is not great, as the demand has been and is limited. Prices here are unchanged at 34c lb.

LEAD.—One dealer has had better enquiry for lead the past week although the general demand is light. Prices are unchanged at 9c to 9½c per lb.

TIN.—There is a let-up in the feverish tin situation and a more settled tone seems to exist in both London and New York. The local situation will be governed largely by developments in the United States and where matters will settle down to a definite basis when the government's details of control and prices are worked out. The market holds firm here at 75c to 76c per lb.

SPELTER.—The business offering for spelter continues small and no changes are noted in prices which are from 10½c to 11c per lb.

ANTIMONY.—With little demand and a firm market, antimony holds unchanged at 16c to 18c per lb.

ALUMINUM.—Little trading is offering in aluminum and with quiet prevailing prices are unchanged at 58c to 60c.

Light Soldering Sets and Upholstery Nails Up

Toronto.

SOLDERING SETS, NAILS, TEAPOTS.—Higher quotations have been made on No. 5 soldering sets, which are for light work and are one-quarter pound in weight. Prices are now $2 per dozen. Upholstery nails have made an advance of 10 per cent. and are now quoted at $1.10 per thousand. Another line to show an increased price during the week is the green English teapots, formerly quoted at $5 per dozen and now priced at $6 per dozen.

Gas Globes Show Advance in Price

Toronto.

GAS GLOBES, ALUMINUM WARE. —There is an increase on opal glass gas globes, which are now selling at $2.75 per dozen in small lots and at $2.60 per dozen in case lots of six dozen to case. One of the lines that is meeting with considerable popularity for the Christmas trade is the children's aluminum ware table sets, comprising plates, cups and saucers and other articles. Prices on these range from $5.30 per dozen sets up to $16 per dozen. They are packed in boxes suitable for the Christmas trade.

TORONTO MARKETS

TORONTO, Nov. 29.—The week has been notable in the number of price changes that have taken place in bicycle and automobile accessory goods. These changes have been for the most part in the upward direction. Wholesale automobile accessory houses are engaged in arranging their prices for their spring quotations and this fact accounts for the number of changes during this period. It is expected that between now and the first of the year there will be a number of price adjustments. Bicycle accessories have also been in the course of revision. A part of the changes are already available but the bulk of the changes are still to be made. There is a considerable movement toward higher levels in these commodities. Other lines in which changes have been recorded include soldering sets, chair nails, warehouse brooms, teapots, gas globes, box scrapers, cooper's tools, galvanized sheaves for pulley blocks. Business continues to be quite favorable for the wholesale trade.

Bicycle Lamps and Bells Have Advanced

Toronto.

BICYCLE ACCESSORIES.—Wholesalers of bicycle accessories have now under advisement the question of spring prices and progress has already been made by way of revising the very numerous lists. Among the lines to show advances in price are bicycle lamps and bells, together with the carbide for the lamps. List price on the solar gas lamp has been advanced to $7 each, which is an increase of 50c in list price. One type of push button bell has been advanced to $13.80 per dozen list, which is an increase of $1.50. Another type of push button bell has been advanced to $9.60 per dozen list, which is an advance of $1.20 per dozen. Electric stroke bells have been advanced to $4.20 per dozen list, an increase of 80c per dozen. The above prices on lamps and bells are list prices and carry a discount of 50 per cent. to the retail trade. As stated in our report last week there has been a sharp advance in the price of bicycle carbide, for use in acetylene lamps. The list price on 100-lb. drums is now $10.80 as compared with the previous list price of $6.50. Discount on this commodity is also 50 per cent. off list. The big increase in this commodity has been caused through the increased use in industrial plants such as shipbuilding and munition plants where acetylene welding is used.

Bicycle Cyclometers and Tire Pressure Gauges Up

Toronto.

BICYCLE ACCESSORIES.—An advance of 14c per dozen has been recorded in Schrader tire pressure gauges as a result of the revision of prices for spring 1918. The former price to the trade was 97c per dozen, whereas the new price is $1.11 per dozen. Schrader valve inside parts have been advanced to $5.20 per 100, as compared with the former price of $4.28 per 100. Bicycle tire valves have been advanced $2 per 100 which makes the new selling price $22 per 100 valves. The above prices are net to the retail trade.

Box Scrapers and Pulley Sheaves Go Higher

Toronto.

SCRAPERS, SHEAVES.—An advance of $1.75 per dozen has been made in the price of box scrapers which now makes the price to the retail trade for No. 18 $8.50 per dozen. These scrapers are used by manufacturers for taking old stencils off boxes to the end that they might place their own stencil thereon. In this way a saving is effected in boxes. Galvanized sheaves for pulleys have made an advance in price and are now quoted as follows for No. 849 W.-C. line: 1½-inch and 2-inch, 15c each; 2¼-inch, 20c each; 2¾-inch, 25c each; 3-inch, 30c each; 3½-inch, 35c each; 4¼-inch, 45c each; 4¾-inch, 50c each; 5⅜-inch, 60c each. Galvanized ball-bearing sheaves No. 846 are quoted as follows: 2-inch, $1.10 each; 2¼-inch, $1.20 each; 3-inch, $1.40 each; 3½-inch, $1.75 each; 4¼-inch, $2.05 each.

Coopers' Tools Go To Higher Levels

Toronto.

COOPERS' TOOLS.—A substantial advance has been recorded in the price of coopers' tools. Levelers, No. 192, have been advanced to $3 per dozen. Hammers No. 163 have been increased to $3. Drivers No. 164 are now quoted at $2. No. 166 drivers, without handle, are now quoted at $2 and No. 166 with handle at $2.50. It is needless to point out that the condition in the steel market has been responsible in large measure for advances in these steel goods.

Side and Tail Lamp List Prices Advance

Toronto.

LAMPS.—One of the lines of automobile accessories to advance in price during the week has been the side and tail lamps in which list prices have been moved considerably higher. Champion steel side lamps are now quoted at $21.60 per pair list, the former list price being $16.25. Royal Junior steel side lamps are now quoted at $18.80 per pair list, the former list price being $12 per pair. Royal tail lamps are now quoted at $9 per pair list, the former price being $6 per pair. Dainty steel tail lamps are quoted at $10 per pair for brass and $10.80 for black. The above prices are subject to a discount of 25 per cent. to the retail trade in quantities of less than a dozen pairs, 30 per cent. in quantities of twelve pairs and 35 per cent. in quantities of 48 pairs.

Acetylene Gas Tanks Advance in Price

Toronto.

GAS TANKS.—An advance in price has been made effective in Prest-O-Lite gas tanks to the extent of approximately 10 per cent. Where these tanks were formerly quoted at a discount of 10 per cent. from list prices they are now quoted at net list. Following are the list prices on this line: Style E, $17 each; Style B, $22 each; Style A, $31 each; Style MC, $12 each. Refills have been moved slightly higher and the following prices prevail: Style E, $1.80 each; Style B, $2.25 each; Style A, $3.35 each; Style MC, $1. Prices on refills are net list.

Some Lamp Fittings Discontinued: Others Advance

Toronto.

AUTO LAMP FITTINGS.—A number of lines of lamp fittings have been discontinued while others again have been advanced in price. For bayonet style composition rubber cap for plugs the new price is 5c each. List price on hard rubber plugs threaded for caps is 20c each, the former list price being 18c. Rubber plug and cap together have been advanced to 25c list. Following are the list prices on other lines where changes have taken place: Plain plug with screw terminals, 15c; lamp socket and connector combination, 46c and 48c; lamp and plug socket with screw terminal, 25c each; lamp socket with rubber cap over screw terminals, 35c; lamp converter, with metal cap. threaded and two nuts, 65c; dash or plug socket connectors, 40c each.

Electric Hand Lanterns Readjusted

Toronto.

ELECTRIC LANTERNS.—A readjustment in the price of Mescolite hand lanterns has been recorded during the week in that a slight decrease in price in one type has been made effective while a slight advance has been put into effect on another. For the Mescolite complete with 1½ volt lamp the list price has been decreased by 10c, making it now $2. On the Mescolite complete with 3-volt, two cell dry battery and 2.8 volt lamp the list price has been advanced 10c which now makes it $2.70 each. Discount to the trade on these lamps is 25 per cent. in small quantities and 30 per cent. in quantities of 50. Auto lamp chests that formerly sold at $1.45 list are now quoted at $1.35 list. Discount on lamp chests is 25 per cent.

Floor Push Buttons Lists Advance 15c

Toronto.

PUSH BUTTONS. — An advance of 15c has been made effective on the list prices of floor push horn switch button, which now makes the list price 70c each. In quantities of less than 25 these push buttons are quoted at 20 per cent. off list. In quantities of 25 and up to 100 the discount is 30 per cent. and in quantities of 100 and over 35 per cent. In smaller quantities this makes a net increase of 12c each.

Dash and Trouble Lamps Make Decline

Toronto.

TROUBLE LAMPS.—One of the lines to record a lower price during the week is that of dash and trouble lamps, a decline of 20c having been recorded in the list price. The new list price is now $2.80 as compared with the former list price of $3. The regular discount of 25 per cent. to the trade applies in quantities of less than six, 30 per cent. in quantities of six and over and 35 per cent. in quantities of 24 and over. In another type of dash lamp there has also been a decline in price. In the Bulldog dash lamp the list has been readjusted to $1.45 list price, a decline of 25c. In metal dash lamps with self-contained lever the list price has been decreased 35c to $1.55. The 45-degree angle neck dash lamp has also been reduced 35c on list price, making the price now $1.55 each. These prices are subject to a discount of 25 per cent. in small quantities, and 30 per cent. discount in half dozens.

Pump Tubing Goes To Higher Levels

Toronto.

TUBING.—Star pump tubing has been increased in price to the extent of 1c per foot on list price for 3-16-inch three-ply and 4c per foot on ¼-inch three-ply. The new list price on the former size is now 12c per foot and on the quarter-inch size 17c per foot. In quantities of less than 25 feet the discount is 25 per cent. In quantities from 25 feet to 100 feet the discount is 30 per cent., and in quantities of 100 feet and over the discount is 35 per cent.

Tire Gauges and Oil Gauges Advance

Toronto.

GAUGES. — Invincible tire gauges have been advanced 25c on list price which now makes the list price $2.50 each. Duplex tire gauges have also been advanced 25c on list price, making the list price now $1.50 each. Dashboard air or oil gauges have been advanced considerably, an increase of $1.80 on list price having been recorded, making the list price now $4.80 each. Those latter gauges are used to show pressure on oiling systems, self-starters, gasoline lines and such like. Discount on above gauges to trade is 25 per cent., in quantities of 12 a discount of 30 per cent., and in quantities of 40 a discount of 35 per cent.

Pipe Wrenches Make Decline in Price

Toronto.

WRENCHES.—A decline in the price of Trimo pipe wrenches has been recorded through the changing of the discount to 37½ per cent. The former discount was 32½ per cent. in small quantities. Following are the list prices on this line: 6 in., $2 each; 8 in., $2.35 each; 10 in., $2.50 each; 14 in., $3.50 each; 18 in., $5 each. Westcott pipe wrenches have been advanced in price through the changing of the discount to 33 1-3 per cent. on list, the former price being list plus 50 per cent. "K" motor wrenches have been advanced in price through the changing of the list prices. 7 in. is now quoted at 53c; 8 in., 67c each; 9 in., 95c each; 10 in., $1.05 each. Discount on this latter line is 25 per cent. in small quantities and 30 per cent. in quantities of twelve.

Hose Clamps Show Decline in Price

Toronto.

HOSE CLAMPS.—A decline in price has been recorded in hose clamps, used in clamping hose on metal pipes. This particular kind is special auto type hose clamp. The reduction is considerable and the following new list prices now prevail: ½-in., 5c each; ⅝-in., 5c each; ¾-in., 6c each; 1-in., 1¼-in., 1½-in., 7c each; 1¾-in., 2-in. and 2¼-in., 8c each; 2½-in., 14c; 2¾-in., 20c; 3-in., 23c; 3¼ in., 26c; 3½-in., 30c. Discount on this line of hose couplings is 25 per cent. from above list prices to retail trade in small quantities, 30 per cent. in quantities of 50 and 35 per cent. in quantities of 200.

Electric Heater List Has Declined

Toronto.

HEATERS, SPARK PLUG WRENCHES.—A decline in the price of Presto electric heaters has been made effective by the changing of the list price to $6 each, a reduction of 50c. Discount on this line is 25 per cent. in small quantities, 30 per cent. in quantities of six and 35 per cent. in quantities of 24. Spark plug wrenches is another of the lines to show an upward tendency. On the 9-32 in., 31-32 in., 1 1-32 in. and 1 5-32 in., the list price has been increased 5c, making the price now 35c each. List prices on larger sizes remain unchanged at 40c each. Discount on this line is 25 per cent. in small quantities and 30 per cent. in quantities of twelve and over.

Price Readjustment of Socket Wrenches

Toronto.

SOCKET WRENCHES.—An advance in the list price of one type of socket wrench sets has been recorded while declines have been made effective in two other lines. In the socket wrench set used by machinists, automobile repair men and marine engineers the list price has been advanced $1.10, making the quotation now $18.60. In the smaller set of automobile socket wrenches the list price has declined $1 and is now quoted at $10 each. In the special hexagon spark plug wrench sets the list has declined $1.10 and is now quoted at $10.65 each. In the Rodtproof socket wrench the list price on type for use in motor boat and marine work the list has declined 25c to $11.25, while the hexagon socket wrench type with ratchet brace has declined $1.15 on list price, making the price now $7.35. These wrench sets are subject to discount of 25 per cent. in quantities of less than six sets and 30 per cent. discount in six sets and over. List on ratchet brace wrench has been reduced 25c to $2, the discount remaining the same at 25 per cent.

Double-End Wrench Lists Decreased

Toronto.

DOUBLE-END WRENCHES.—General service sets of double-end wrenches have declined in price slightly through the change of list prices on this line. Where formerly the list price was $1.60 per set it is now changed to $1.50 per set. The set of double-end wrenches that formerly sold at $2.50 list is now quoted at $2.40 list price. This latter type of wrench is used more particularly for automobiles. On sets of double-end garage wrenches which formerly sold for $4.10 per set the price is now $3.90 list. These goods are subject to a discount of 25 per cent. in small quantities and 30 per cent. discount in quantities of six sets.

Cotter Pin Extractors and Pliers Go Higher

Toronto.

EXTRACTORS, PLIERS. — Higher prices have been made effective on cotter pin extractors, used for extracting cotter pins and spreading the split ends to prevent them from coming out. List price on this article has been advanced 1c each, making the quotation now 16c each. In lots of less than twelve the regular discount of 25 per cent. prevails, in lots of 24 the discount is 30 per cent., and in lots of 96 the discount is 35 per cent.

Tinners' Snips Are Lower in Price

Toronto.

SNIPS.—A decline in price in Red Devil tinners' snips was put into effect during the week, list price having been reduced 35c, making the new list price $2. The handy auto snip remains unchanged in price at $1.65 each. These snips are subject to a discount of 25 per cent. in small quantities, 30 per cent. in half dozens and 35 per cent. in lots of 24 snips.

Valve Grinders Have Been Reduced

Toronto.

VALVE GRINDERS.—A slightly reduced price has been made effective on the Universal valve grinder by the changing of the list price from $1.45 to $1.35 each. This valve grinder fits all types of valves which have either pin holes or slotted tops; and can be used for small cars as well as large cars. List price is subject to a discount to the retail trade of 25 per cent. in lots of less than half a dozen and 30 per cent. in lots of six and over.

Grease Cups and Oil Cups Carry New Lists

Toronto.

GREASE AND OIL CUPS.—Higher prices have been made effective on Empress ratchet grease cups, Empress plain grease cup and nickel-plated brass oil cups. On the ratchet grease cups the new list price follow: ¾-in., 29c each; 1-in., 34c each; 1¼-in., 54c each; 1½-in., 70c each; 2-in., $1.08 each. Empress plain grease cups are quoted as follows: No. 000, 23c each; No. 00, 27c each; No. 0, 47c each; No. 1, 62c each; No. 2, $1 each. Brass oil cups are quoted at following list prices: No. 0, 11c each; No. 1, 12c each; No. 2, 15c each; No. 3, 17c each; No. 4, 21c each; No. 5, 30c each. All of the above prices on grease and oil cups are subject to a trade discount of 25 per cent. in small quantities, 30 per cent. in quantities of 24 and 35 per cent. in quantities of 96.

Well Wheels Have Advanced 10 Per Cent.

Toronto.

WELL WHEELS, FOOD CHOPPERS.—Higher prices have been made effective on well wheels to the extent of approximately 10 per cent. Eight-inch size is now quoted at $6, ten-inch at $6.50 and 12-inch at $8.25. Universal food choppers is another of the lines to show higher prices during the week. No. 0 is now quoted at $15.20 per dozen, No. 1 at $18.80 per dozen. No. 2 at $24 per dozen and No. 3 at $30.35 per dozen. Above prices are net prices.

Stoves and Furnaces Still in Active Demand

Toronto.

STOVES, ENAMELWARE. — There was a continued active demand for heating stoves and furnaces during the week. Cold weather of the past week has renewed interest in these lines and the demand has again become insistent. This is the season of the year when the call for furnace deliveries is perhaps the heaviest. Oil heaters and oil burning cook stoves held steady in price. A higher price has been made effective on the ovens for Perfection oil cook stoves, price on No. 22G having been advanced 50c and is now quoted at $5. Enamelware trade is reported fair with prices being maintained.

Metal Shingles and Sidings Go Higher

Toronto.

SIDING, SHINGLES.—Higher prices were recorded on metal shingles and siding. In the instance of standard galvanized shingles the advance amounts to $1.60 per square, making the selling price now $11. Standard painted shingles have been advanced $1 per square and are now quoted at $8.50. Standard galvanized metal siding advanced 85c per square, making the selling price now $9.25. Standard painted metal siding advanced 90c per square, making the price now $6.60. This advance follows as a part of the movement that has affected corrugated sheets.

Coal Tar and Refined Tar Go Up

Toronto.

TAR, ROOFING MATERIALS. — An advance of $1 per barrel was recorded in the price of coal tar during the week, making the price now $5.50 per barrel. Refined tar has been advanced 50c per barrel, which places the selling price at $6 per barrel. Other roofing materials held unchanged. Liquid roofing cement is quoted at 27c per gallon in barrel lots and roofing pitch at 75c to 85c per hundred.

Booking Business on Binder Twine

Toronto

CORDAGE, TWINE. — Dealers in binder twine are now engaged in booking business for delivery next year and report that there has been free ordering. Manufacturers find it necessary to sound the requirements of the trade a considerable distance in the future. Prices remain open, to be named at some date in the future. This is the usual method of doing business and the year has proved no exception in this respect. There is a continued good demand for small twines. Cordage business is of a sorting nature and somewhat light at present. Prices held steady at the quotations given in current quotations.

Gasoline Consumption Is Keeping Up Well

Toronto.

GASOLINE, COAL OIL.—In spite of the fact that the cold weather of fall is here consumption of gasoline has not fallen very materially. Oil companies report the consumption is still keeping up at a good rate. There is a noticeable increase in the demand for coal oil, however, as this consumption is incidental to cold weather when people use more in oil heaters. Country districts where coal oil lamps are still used also record an increase in the consumption. Gasoline holds unchanged at 31½c per gallon and coal oil at 16c and 19c per gallon, according to the grade.

Wire and Nails Hold Steady and Firm

Toronto.

WIRE, NAILS.—There is a steadily firm situation in wire products due to the inability of manufacturers to secure very large supplies of wire rods. The mills in the United States are directing their energies to production of war steel and commodities for domestic consumption will be in greater restriction as time proceeds. Wire nails held in steady position due to the situation in wire rods and quotations were made on the basis of $5.45 per hundred pounds. There is light business in nails at the present time. Smooth steel wire is quoted at $6.50 per hundred pounds for base sizes Nos. 0-9.

Wool Sponge List Has Been Advanced

Toronto.

SPONGES.—Abaco wool sponges for the garage trade in the medium size have been advanced 20c on list price, making the price for No. 9 $1. No. 7 or large size remain unchanged at $1.40 list price. These goods are subject to a discount of 25 per cent. in numbers of less than a dozen, 30 per cent. discount in twelves and 35 per cent. discount in lots of 48.

Hub Cap Wrench Lists Advance 50%

Toronto.

HUB CAP WRENCHES.—An advance amounting to 50 per cent. on the former list price has been made effective on hub cap wrenches for Ford cars, the new list price being 27c each, whereas the former list price was 18c each. These wrenches are subject to a discount of 25 per cent. in small quantities and 30 per cent. discount in quantities of twelve.

Brake Shoes And Anti-Rattlers Readjusted

Toronto.

BRAKE SHOES, ANTI-RATTLERS.—New list prices have been made effective on hub brake shoes for Ford cars, which show lower prices. Hub brakes, with thermoid lining, are quoted at $1.50 per set list, and with rival lining at $1.20 per set list. These prices are subject to a discount of 20 per cent. in small lots and 20 and 5 per cent. in lots of half-dozen brakes. A readjustment in the price of rod anti-rattlers for Fords provides for a 5c decline in list price on No. 1 black and an advance of 10c on list price for No. 3 black. List price on No. 1 black is now 40c each and for No. 3 black 45c each. Discount on numbers of less than a dozen is 25 per cent., in lots of 12, 30 per cent., and in lots of 48 a discount of 35 per cent.

List Price On Machines Advances

Toronto.

WASHERS.—The list price on one line of washing machines, Easywork, has been advanced from $17.30 to $19.30, or an advance of $2 over previous list price. Discount remains unchanged.

Available Steel Is Not Plentiful

Toronto.

IRON AND STEEL.—Complaint is being voiced in the United States that the available supplies of steel are growing still less with each day that the war progresses. Curtailment in use is being effected wherever possible, and one of the first industries to feel the impact is the automobile manufacturers. Building of pleasure cars is being restricted. Short supplies of coal and coke are interfering with the production of iron and steel. Canadian manufacturers are experiencing the same difficulty. Local dealers report a fair movement of iron and steel. Prices are holding steady. In sheet cast steel the lower price has disappeared in some instances, which now makes the quotation 35c per pound.

TORONTO—		Per 100 lbs.

Tin Plate Stocks Are Being Conserved

Toronto.

SHEETS, PLATES.—With the desire of the Government to conserve supplies of tinplate to be used in containers for canned goods quotations have been withdrawn by dealers on IX, IXX, and IXXX tin plates. Quotations that are made on these lines are, therefore, purely nominal. Some 1C tinplates are still available, the price quoted being $28 per box. Canada plate is not being quoted at all, as arrivals that came into this market some two months ago quickly went into consuming channels. Black sheets and galvanized sheets held steady in price during the week. Some big buyers of these commodities are of the opinion that the bottom of the market has been reached. Mills in the United States are asking premiums for any available supplies they may have to sell—that is, premiums over the established Government price of 5c per pound for No. 28 gauge black sheets.

Former Prices On Sheets Restored

Toronto.

CORRUGATED SHEETS.—Manufacturers of corrugated sheets have returned to the previous level on corrugated sheets, following an advance of 30c on No. 28 gauge and 40c on No. 26 gauge, which was made effective last week and lasted for a few days only. No. 28 gauge is now quoted at $8.70 per 100 square feet and No. 26 gauge at $9.60. The statement was made by one dealer that, since the advance made was slight, on second consideration it was deemed advisable to adhere to former prices rather than disarrange the market by a new set of prices. Conductor pipe and eavetrough, however, hold steady at the advance recorded of approximately 10 per cent., which now makes the selling price net list.

TORONTO—	Galvanized Per 100 Sq. Feet	Painted
No. 28 gauge	$ 8.20-$9.00	$ 7.50
No. 26 gauge	9.60-10.00	....

Movement Of Boiler Tubes Is Not Heavy

Toronto.

BOILER TUBES.—There is a slow movement of boiler tubes at the present time owing to the restrictions with which sales are hedged around. Between an embargo in the United States and the Canadian Government holding tight rein on the situation this side of the line, there are very few available for domestic use. Prices held unchanged and at firm quotations.

Solder Again Advances 1c to 1½c Per Pound

Toronto.

LEAD AND ZINC PRODUCTS.—Due to the firm situation in the ingot tin market there has been an upward tendency in the price of solder during the week. Guaranteed solder advanced 1½c per pound, and is now quoted at 40½c. Strictly half-and-half advanced 1¾c, and is quoted at 39c per pound. Commercial solder and wiping solder have been advanced 1c per pound in each instance, the former now being quoted at 37c and the latter at 38c per pound. Other lead and zinc products held unchanged. There is a fair demand reported.

Canadian Tin Is Cheaper Than In U.S.

Toronto.

INGOT METALS.—Tin was again the centre of interest in the local ingot metal market. The fact that quotations are being made in this market lower than those prevailing in the New York market is a point of interest worth noting. The situation in spelter seems to indicate a firmer undertone, with the possibility of higher prices through the curtailment of output.

COPPER.—There is an easier tone in the copper market for deliveries to be made in January, February and March. The point of interest in the market is the fact that jobbers' margin in the United States has been fixed at 5 per cent. over producers' price. The producers have no copper for sale in November and December, but are booking to the jobbing trade on the basis of 23.50c per pound in the United States, which is the same basis of sales to the United States Government. As the result of the establishment of this margin it is expected that prices will show an easier tendency as the months of January, February and March draw nearer. Locally quotations were made on the basis of 32c for casting and 32½c for electrolytic.

TIN.—An item of interest to the Canadian trade is the fact that they can buy tin in this market at a lower price than obtains in the New York market. This is possible through the existence of some stocks of tin in the local market. Quotations are made in this market on the basis of 72c to 78c per pound, whereas quotations in the New York market are on the basis of 80c per pound. The United States Government has commandeered some 100 tons of tin for use of the Navy Department, being the stocks held in bonded warehouses. In the United States the sub-committee of the American Iron and Steel Institute has taken over control of importations and distribution.

SPELTER.—The situation in spelter continues quiet. Reports were current in the United States market that purchases were made at an advance of ¼c over prevailing quotations for delivery during first quarter of next year. Quotations locally were made on the basis of 10c per pound.

LEAD.—The market is quiet, with light demand. Quotations were unchanged on the basis of 9c per pound.

ANTIMONY.—In the primary market there was a slight improvement in the antimony market, but locally the market was quiet, with quotations unchanged at 16c to 18c per pound.

ALUMINUM.—Judging from the price of aluminum in the United States market there would seem to be fairly good stocks of that metal in the market. Locally prices held unchanged at 60c per pound.

PIG IRON.—The situation in pig iron is one of steady firmness following the readjustment in price recently made to lower levels. Smelters of iron are facing the problem of light coke supplies, and this is having a firming effect on the market. Quotations were made on the basis of $50 per ton for foundry iron.

Firmer Undertone In Old Metals

Toronto.

OLD MATERIALS.—There was a slightly firmer undertone in the market for old material during the week, particularly in iron and steel products. There is a fairly good inquiry for these commodities in the United States at the present time but movement is restricted through lack of adequate transportation. Prices in the local market held unchanged during the week, with the exception of old rubber boots and shoes which declined ¼c and are now quoted at 8c. Auto tires are also down 1¼c, being now quoted at 4½c lb.

LONDON MARKETS

LONDON, Nov. 29.—Price changes have been in the upward direction in the majority of instances during the week. Business in this district is good. The cold weather has speeded up sales for stoves, stovepipe, coal hods and kindred lines. The demand for hand sleighs has also started, together with hockey sticks and skates. One of the important lines to register an increase during the week is that of glass. Linseed oil, on the other hand, is lower.

Glass Has Been Increased In Price

London.

GLASS.—Higher prices have been recorded in glass during the week through the changing of the discounts. Single and double diamond glass is now quoted at 40 and 10 per cent. off list, while cut lights are quoted at 33 1/3 per cent. off list. There is a very firm situation in glass, which seems to point to still higher prices. Following are the net prices per case figured on the basis of 40 and 10 per cent. off list:

	—Case—	
	Single	Double
Under 25 inch	$ 9 18	$12 96
26 to 34	9 72	14 04

Hitching Rings And Food Choppers Higher

London.

HITCHING RINGS, FOOD CHOPPERS.—Japanned hitching rings have been advanced in price, and are now quoted at 90c per dozen. Universal food choppers have been advanced, and are quoted as follows: No. 0, $15.20 per doz.; No. 1, $18.80 per doz.; No. 2, $23.95 per doz.; No. 3, $30.35 per doz.

Bug Finish And Sheep Dip Advance

London.

BUG FINISH, SHEEP DIP.—New prices for spring booking have been announced on bug finish as follows:—1 to 3 barrels, $7.25 per barrel; 4 barrels and over, $7 per barrel. Zenoleum sheep dip and disinfectant is now quoted higher in price at the following: 8-oz. tins, $2.40 per dozen.; quarter-gallon, $5 per dozen; half-gallons, $8.40 per dozen; gallon tins, $15 per dozen.

Rope And Nails Hold Unchanged

London.

ROPE, NAILS.—Quotations on rope held steady during the week. Pure Manila is quoted on the basis of 39c per pound, British Manila and New Zealand hemp ropes at 33c per pound, and sisal rope at 27½c per pound. Sorting business in rope is light at this season of the year. Nails are in firm market, with prices unchanged at $5.45 per keg base for standard wire nails and $5.75 base for cut nails.

Batteries And Heaters In Good Sale

London.

HEATERS, BATTERIES.—There is a big demand for flashlights and batteries for the Christmas trade. Prices on these lines are maintained at 33 1/3 per cent. discount for Eveready Daylos and batteries. Oil heaters are also in good demand. No. 525 is quoted at $5.50 each and No. 530 at $6.25 each. Prices on oil heaters are subject to a discount of 25 per cent.

Skates, Weather Strip And Snow Shovels Moving

London.

SKATES, WEATHER STRIP AND SIFTERS.—Winter lines are now moving freely with the recent cold snap. Starr skates are being quoted at a discount of 30 per cent. off list. Frost King weather strip is quoted at $4.40 per dozen packages, Swan hardwood weather strip at 75c per set, and wood and felt stripping at 75 per cent. discount. Ash sifters are in good demand, quotations being made on the following basis: Com-

mon wood sides, $2.15 per dozen; Banner, $2.90 each; Rocker No. 1, $5.25 each.

Snow Shovels Soon Needed

Now that snow shovels will soon be more generally needed in Ontario, the sale for these goods is also reported good. Quotations are being made on the basis of 12½ per cent. discount off list.

Snow Shoes Moving

In anticipation of a good demand for snow shoes, stocks are being examined and prices checked over. Following are prices prevailing in this district: Boys' size 10 in. by 23 in., $2.35 per pair; ladies', size 11 in. by 36 in., $2.85 per pair; men's, size 12 in. by 42 in., $3.25 per pair; men's, size 14 in. by 42 in., $4 per pair.

Safety Razors In Good Demand At Present

London.

SAFETY RAZORS.—There is a good sale for safety razors at the present time owing to the suitability of these articles for Christmas gifts. Gillette is quoted at $3.75 each; Auto-strop at $3.75 each; Gem Junior and Everready at 75c each.

Loaded Shells in Fair Sale

There is a fair sale for loaded shells at present. Smokeless powder shells are quoted net list and black powder at 10 per cent. on list.

Winter Lines Are In Active Demand

London.

SLEIGHS, BELLS, AND HOCKEY STICKS.—With the approach of winter a good trade is developing in such articles as hand sleighs, sleigh bells, collar bells, chimes, and hockey sticks. Hand sleighs are quoted at a discount of 35 per cent. off list. Team bells, No. 7 sheet steel, is quoted at $1.30 per dozen; No. 2 rough bell metal at $3.35 per doz.; No. 3 rough bell metal at $3.85 per doz.; No. 4 rough bell metal at $5.50; No. 5 rough bell metal at $6.50. Collar bells on strap, No. 2 are quoted at $1.30 per dozen, and No. 3 at $1.45 per dozen. Swedish chimes, No. 1400 are quoted at $2.10 per strap, No. 1500 at $2.50 per strap, and No. 1700 at $3.35 per strap.

Hockey Stick Prices

Hockey sticks are quoted at the following prices: Boys' red, 85c per dozen; boys' white, 85c per dozen; men's rock elm, $2 dozen; men's Spalding, $3.75 dozen; men's MicMac, $4.75 dozen.

Ensilage Forks Unchanged

Manure and ensilage forks are unchanged in price at 25 per cent. off list. Cow chains are quoted at 12½ per cent. discount.

Linseed Oil Down 2c; Turpentine Advances 2c

London.

LINSEED OIL, TURPENTINE.—Lower prices were made effective on linseed oil during the week to the extent of 2c per gallon, and the following prices now prevail: 1 to 2 barrels, raw $1.48 per gallon, boiled $1.51 per gallon; 3 to 5 barrels, raw $1.47, boiled $1.50; 6 to 9 barrels, raw $1.45; boiled $1.48 per gallon.

Turpentine gave evidence of a firmer tone through an advance of 2c per gallon. In single-barrel lots it is now quoted at 77c per gallon, and in 2 to 4-barrel lots at 76c. In 5-gallon lots the price is 84c per gallon.

White Lead Unchanged

The market for white lead in oil is holding steady at $16.20 per hundred pounds in ton lots and $16.55 per hundred pounds in less than ton lots. Elephant brand is quoted at $16.80 in ton lots and $17.15 per hundred pounds in less than ton lots.

Putty Prices Hold

Prices of putty held unchanged at $4.65 per 100 lbs. for standard in 25, 50 and 100-lb. drums, and pure putty at $1 per hundred in advance of above prices.

WINNIPEG MARKETS

WINNIPEG, Nov. 27.—Winnipeg markets, which for the past two weeks have been fairly steady, show general activity this week, with all prices on the upward move, among these being woodenware, shoe thread, grindstone fixtures, game traps, Clemax blowers, engineers' wrenches, self wringing mops, Cannon oilers, Enterprise food choppers, Mrs. Potts' irons and screen doors. Business in all lines continues normal with sleighs and stoves leading.

WIRE RODS STILL SCARCE

That the wire nail situation is one of extreme firmness is evidenced by the great difficulty experienced by nail manufacturers in securing supplies of wire rods. Not only is there a scarcity of rods, but the few available have to be purchased at a price which would not allow the nail makers a profit at the prices which they are receiving for nails to-day. There has been a feeling in Canadian trade circles that nails would probably decline in price following announcements of prices on rods in the United States. Canadian manufacturers who wished to purchase United States rods have found that supplies are not available at the prices which have been published in United States market reports. In fact, in practically all cases U. S. rods are not available at any price. Nail makers, who have found it necessary to purchase rods, find that with present prices on rods, increased costs of labor, increased costs of kegs and other charges, the cost of production would run at the very least over 20c per keg above the present price. This would indicate that based on present costs of raw materials and manufacturing the price of wire nails is exceedingly reasonable, and with a continued firm market for raw materials might possibly advance at any time.

Solder Prices Are Holding In Firm Market

Winnipeg.

SOLDER.—Price on solder which has been holding firm for the past few months is still quoted at 41 to 42c lb. However, advances in lead and tin which have recently been recorded as well as the limited amounts to be had will no doubt affect the solder market soon.

Linseed Oil And Turpentine Hold Steady

Winnipeg.

LINSEED OIL, TURPENTINE.—No further change is recorded in linseed oil with prices holding firm as formerly quoted, namely, raw, $1.65 gallon; boiled, $1.68 gallon. Turpentine prices still hold firm with no indications of any immediate change. To-day's prices are as follows: Barrels, 80c gal.; ½ barrels, 83c gal., 5 gals. 85c gal., 1 gal. 85c gal., plus the usual extra's for containers.

Woodenware Shows Advance Of 10 Per Cent.

Winnipeg.

WOODENWARE.—Further advances have just been put into effect by woodenware manufacturers and show an increase of 10 per cent. on the following lines: Wood pails, $3.50 doz.; wood tubs, No. 3, $11.45 doz.; No. 2, $13.20 doz.; No. 1, $15.65 doz.; No. 10, $18.30 doz. Although no advance is given on fibre tubs and pails, a further increase would not come as a surprise.

Shoe Thread Goes Up; Stocks Very Limited

Winnipeg.

SHOE THREAD.—In HARDWARE AND METAL issue of November 10 an advance in shoe thread was predicted and has just gone into effect, showing substantial increases over former prices, with only a limited quantity available. To-day's market prices are as follows: Standard brand, No. 8, $2.75 lb.; No. 10, $2.85 lb.; No. 12, $2.90 lb.; No. 15, $2.95 lb.; No. 20, $3 lb. Harp brand, No. 8, $2.65 lb.; No. 10, $2.75 lb.; No. 12, $2.80 lb.

Grindstones Advance

Grindstone fixtures again show an upward trend in price, advancing approximately 12½ per cent. and are quoted today as follows 15 in., $7.25 doz.; 17 in., $8.00 doz.

Game Traps Are Higher By 14%

Winnipeg.

GAME TRAPS.—As predicted in a recent issue of HARDWARE AND METAL that an advance on game traps was imminent, this has just come to hand and shows an increase of 14 per

cent. over former ruling prices. High fur prices have had the effect of greatly stimulating the sale of traps, which are moving freely. To-day's market prices are as follows.

Victor—No. 0, $1.80 doz.; No. 1, $2.12; No. 1½, $3.37; No. 2, $4.44; No. 3, $5.90; No. 4, $7.
Jump—No. 0, $2.35 doz.; No. 1, $2.75; No. 1½, $4.12; No. 2, $6.05; No. 3, $8.05; No. 4, $9.48.
Hawley & Norton—No. 0, $2.77; No. 1, $3.25; No. 1½, $4.88; No. 2, $6.83; No. 3, $9.10; No. 4, $10.72.
Newhouse—No. 0, $2.48 doz.; No. 1, $4.45; No. 1½, $6.65; No. 2, $9.85; No. 3, $13.15; No. 4, $15.48; No. 2½, $15.48; No. 3½, $17.37; No. 4½, $37.53; No. 5, $9.40 each; No. 50, $6.76 each.

Blowers And Food Choppers Move Upward

Winnipeg.

FOOD CHOPPERS, BLOWERS.—Climax blowers again show advances owing to increased cost of production, the increase amounting to $1 each, they being quoted to-day at $16 each.

Food Choppers

Enterprise food choppers show another strong advance and are quoted to-day at the following prices: No. 5, $2.75 each; No. 10, $4.65 each; No. 12, $4.10 each; No. 22, $7.15 each; No. 32, $9.35 each and extra parts are quoted at 20 per cent. advance on list.

Oilers Have Been Moved To Higher Levels

Winnipeg.

OILERS.—Prices on genuine Cannon oilers, which have remained firm for the past few months, again move upward showing a very marked increase over the previous market and are quoted to-day at: 1 pint, $11.95 doz.; 1½ pint, $13.65 doz.; 2 pint, $15.55 doz.

Mops Go Higher By 50c Per Dozen

Winnipeg.

MOPS, WRENCHES.—Self wringing mops again advance 50c dozen and are quoted to-day at $4.50 doz. Engineers' wrenches show another increase of approximately 12½ per cent. and are quoted to-day as follows: Single end No. 0, 9c each; No. 1, 11c each; No. 3, 16c each; No. 4, 20c each; No. 5, 23c each; No. 6, 28c each; No. 7, 36c each. Double end, No. 25, 15c each; No. 29, 23c each; No. 31, 41 each; No. 34, 41c each; No. 37, 60c each.

Sad Irons Again Move In Upward Direction

Winnipeg.

SAD IRONS, WHIPS.—Mrs. Potts' sad irons again show a strong upward trend of approximately 50 per cent. and are quoted to-day as follows: No. 55, $1.80 set; No. 50, $1.90 set.

Correct Price on Whips

Through a misunderstanding bamboo binder whips were quoted in a recent issue of HARDWARE AND METAL at $4.50 doz., this should have read $4 doz.

Booking Prices On Screen Doors Issued

Winnipeg.

SCREEN DOORS, WINDOWS:—New prices on screen doors and windows have just been issued by the manufacturers and show considerable increase over last year's price. On account of the numerous styles and makes of doors it is impossible to quote all lines however, the price on the standard 7/8 green door is $13.20 doz. Other lines are quoted on application. Owing to labor shortage the supply of doors and windows for next year will no doubt be very limited as manufacturers in taking orders cannot guarantee to fill complete. Bookings are now being accepted on the above lines for 1918 shipments.

PITTSBURG MARKETS

PITTSBURG, Pa., Nov. 27.—Were it not for a curtailment in the production of pig iron, due to an increased shortage of coke, it is probable that foundry iron would be more plentiful. The business of some foundries has greatly decreased on account of war conditions. One large interest, making goods used chiefly in building operations and normally consuming fully 50,000 tons of pig iron annually, is shipping practically nothing, has a stock of 20,000 tons of iron, and has instructed furnaces to suspend shipments of pig iron. One of its three plants is to be converted for shell manufacture.

Coke Situation Unsatisfactory

The coke situation is extremely unsatisfactory. All year the supplies from the Connellsville region have been poor, to such an extent that the country's pig iron production has fallen a trifle short of that in the corresponding period last year, when there are new furnaces sufficient to increase the production by between 5 and 10 per cent., while in the past fortnight the coke shipments have been still poorer. The majority of furnace interests have had to bank for longer or shorter periods during the past ten days. The result is that, while they had been making an earnest effort to make sales at the Government prices to regular customers, they have now had to withdraw from the market entirely, as they can hardly meet their contract requirements, and may have a worse time when winter weather arrives. It is estimated that one could readily sell 200,000 tons of steel-making pig iron to steel works in this vicinity for delivery up to April 1 if the iron could be furnished.

Railroad Congestion

Nearly all the railroad divisions in the Central West are congested, and in the case of some divisions handling chiefly coal and coke the congestion amounts to a blockade. No adequate relief is expected until the Washington authorities carry out the programme now being considered of curtailing activity in the industries deemed unessential to prosecution of the war. At the request of the authorities the railroads have compiled a list of 525 commodities which might be considered unessential, and some of these will probably be embargoed.

More Set Steel Prices

The American Iron and Steel Institute has made a further announcement as to iron and steel prices. Light rails, 25 to 45-lb., are set at 3c, or $67.20 per gross ton. Chain is set at 8c base for 3/8-inch proof coil chain. Cold rolled strip steel is set at 6.50c base. Some long lists of extras and differentials have been promulgated, including complete lists for small nails, brads, tacks, etc., as well as for wood screws.

More Steel in Market

Offerings of finished steel products for early deliveries have become somewhat

(Continued on page 60.)

WAR PREPARATIONS IN WASHINGTON

(Continued from page 33.)

Goethals, who surprised the world by completing the Panama Canal on schedule time, was also impressed into this service. Now Henry Ford is being brought in. Ford knows how to standardize manufacture so thoroughly that he can turn out more and cheaper automobiles than anyone in the world; so they have delegated him to the task of standardizing the building of merchant ships. Frank A. Vanderlip, a banking authority of international reputation, was installed at the Treasury. Davisson, one of the Morgan partners—no further word of commendation is necesssary—was secured to head the Red Cross work. And so it went all along the line.

The National Council

But the most radical departure was the organization built up around the Council of National Defence. The Council consists of six members of the Wilson cabinet. First an advisory commission was appointed, composed of seven of the most prominent business men in the country. Each of these seven men had charge of one branch of industry. For instance, Daniel Willard, the president of the Baltimore & Ohio Railroad, was put in charge of transportation. Each chairman divided his own branch into a number of component parts and secured committees for each section. These committees were not purely decorative or honorary bodies. Each man selected agreed to give all or part of his time to the service of the country and forthwith came on to Washington and started to work.

The work of organizing each branch of industry then began. And some wonderful results were achieved. Supplies needed by the Government were produced in record time at prices cut far and away below the market levels. The story of achievement is so remarkable, however, that it will require **an article itself in the telling.**

EDITOR'S NOTE.—*Next week will be told the complete story of the organization and the work of the advisory committees of the Council of National Defence*

WEEKLY PAINT DEPARTMENT

Practising the Doctrine You Preach

Appearances Count For Much—Value in a Special Store Color—Christmas Displays Enhanced—Inside Appearance to Confirm Outside Impressions.

HOW many merchants advertise in the newspaper and make special window displays as a means of pushing the sale of the paint which they handle? And yet their store front and their store interior bear glaring evidence of that very need of paint which they are trying to impress on their customers as imperative from the standpoint of economy, appearance and increased property valuation. Fortunately the number who really let their store dress become shabby and out-of-date is not large but there are many who let the appearance of their store become soiled to some extent and this very thing should be avoided.

Appearances Count for Much

Isn't it true that the clothing man's appearance has something to do with the effect his suggestions have as to the clothes most suitable for you—doesn't the shoe salesman's recommendations bear more weight if his own feet are neatly and properly shod? Why then shouldn't the neat, clean, freshly-painted store exterior and store interior bear weight when advocating the use of paint by your customers? They do not need to wonder why you do not use paint. They know you do, they feel you must believe in it, they realize you are practising the doctrines you preach.

Value in a Special Store Color

There have been many stories told of merchants who adopted a standard color, bright, attractive, compelling, for their store front. Such a procedure has value from an advertising standpoint. The "Red Hardware," the "Blue Store" are names easily remembered—the outside appearance of the store, either red, blue, or some other color stands out and is a distinguishing feature. It is not necessary for your customers to look around for the name, which may be above the store windows, below them or stencilled on them—the color stands out from all angles, it is easily detected. Such a procedure is not advocated for all stores by any means and would be hard to employ on some fronts which are practically all glass but the point is made so that the thought may be directed to the better appearance of the store front.

Christmas Displays Enhanced

What does this mean at this Christmas season? All merchants will be decorating their display windows with goods adaptable to holiday giving.

Is the setting one of cheerful surroundings recently decorated or is it one which has withstood the rigors of the elements for months and perhaps years? It is unnecessary to state which creates the better impression—the appearance is a tribute (or otherwise) to the work of the window dresser.

Twice a Year Best—at Least, Once

It would appear that twice a year is none too often to paint the store front. The value of the window display is well recognized—the value of a clean, well-painted store front adds just that much to this important factor in successful store keeping. Most certainly every year, at the outside, should see the exterior freshened by a new coat of paint.

What then of the interior? The exterior attracts. Does the appearance of the interior of your store confirm favorable impressions gained on the street or does the outside work go for naught? Much of what has been said of the outside of the store could be repeated here. It is evident that neat displays in showcases, on counters, in wall cases or on shelving count for much but if the varnish is cracked, the paint peeling or the kalsomine soiled, much of their effectiveness is lost. This will apply to every department in the store, but to concentrate on paint is the object of this article.

Arranging the Paint Stock for Season

The arrangement of the paint department calls for a careful study of the stock, how the sales vary, and how each line as its best season approaches may come to the fore with its arguments. The sale of house paints for outside use is not a big feature in any paint movement now—this would apply to barn paints, bridge and roof paints, etc., which are used almost exclusively on outdoor jobs. These lines then could well go to the background for the present and pressure could be brought to

(Continued on page 60.)

A very neat interior store arrangement. It is in keeping with the merchant's preachings and sales are much more easily made when your store front and interior arrangement show that you believe in the arguments you advance in favor of the use of paint

Jamieson's

PURE PREPARED

Paints & Varnishes

He Will Come Back!

When a man buys a can of paint that gives him *efficient* and *economical* service he doesn't forget where he bought it. This is especially true in this period of high prices. Satisfaction of this kind will bring him back sooner or later for more.

That is an example of how *Jamieson's* pure prepared paints and varnishes increase sales.

Sell *Jamieson's* line exclusively. It is the best. Write for proposition.

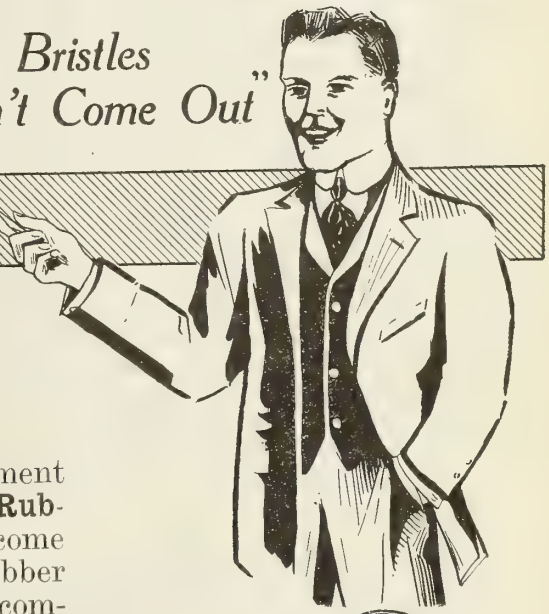
BOECKH'S STEEL (RUBBER SET) GRIP BRUSHES

"The Bristles Can't Come Out"



THERE'S a double-barrelled sales argument in that name—"Boeckh's **Steel Grip Rubber Set** Brushes." The "bristles **can't** come out," because they are first set in hard rubber and then bound tightly and firmly with compressed steel Ferrules.

Master Painters, as well as amateur painters, appreciate the "Painting satisfaction" that is assured by "Steel Grip-Rubber-Set."

If interested, tear out this page and keep with letters to be answered.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Nov. 21.—The features of the week in paint markets here are very few, but a change in the dating for putty and white lead in oil is interesting. These orders were formerly accepted as for delivery up to December 1. Now they will be taken for delivery any time up to March 1, 1918, at present prices. The outlook for linseed oil is such as to cause some uneasiness, owing to the freezing up of the rivers and canals, and it is unlikely that many deliveries will be made. The Government embargo on flaxseed accentuates the crushers' troubles, and while there has been somewhat of an unsettled condition in the New York market, this will possibly settle down soon, as more definite reports from the large growing centres may be looked for.

Deliveries Of Flaxseed Continue To Be Factor

Montreal.

LINSEED OIL.—The firm tone of the market here will likely continue and, owing to the freezing up of canals and some of the lakes, there will be a tendency to higher levels. The crushers here are still complaining of the severity of transportation troubles, and with a Government embargo on flaxseed held at the head of the lakes and various railway centres, the situation does not promise well. Sales are being made on the basis of last week's prices, but there is no promise of these remaining where they are for any length of time. It may be said that there has been a tendency to lower prices for flaxseed in the United States centres, but this will be unlikely to make any change in Canadian prices owing to the car shortage, in addition to which it must be remembered that the severely cold weather prevents the transportation of seed.

Linseed Oil -	Raw, Imp. gal.	Boiled, Imp. gal.
1 to 2 bbls.	$1.37-$1.41	$1.39½-$1.43
2 to 5 bbls.	1.36- 1.40	1.38½- 1.42

Turpentine Prices Maintained; Stocks Fair

Montreal.

TURPENTINE.—The trade in turpentine is quite light and the prices are firmly maintained. There has been some fluctuation in the United States market, but the price locally has not been altered owing to the embargoes, etc. It is to be noted that with the freight situation such a factor prices will not be affected as they would result should shipping be available for the export of United States supplies. There is a fair quantity of turpentine in England to-day, but not as much as will be needed if supplies cannot be sent forward in fair volume. Depending upon the deliveries of the next few weeks, turpentine will be watched with interest.

Turpentine—	Per Imp. gallon
5 bbls. and over	$0.72-$0.75
1 barrel lots	0.74- 0.75
Small quantities	- 0.83

New Dating Is Given On White Lead In Oil

Montreal.

WHITE LEAD IN OIL.—In view of the fact that travellers seeking paint orders are asked from time to time for quantities of white lead in oil, the makers of paint have decided to take orders on the basis of March I next, delivery at present prices. Until now orders have been accepted for delivery up to December 1. The volume of business being received for this line will now increase. It is expected that the prices ruling to-day will hold firm, with a tendency toward higher levels.

Spring Bookings For Mixed Paint Are Good

Montreal.

MIXED PAINT.—Travellers representing the various manufacturers of mixed paints and other kindred lines are sending in a very satisfactory amount of business for shipment after the first of the year, and all agree that this is of good proportions. For immediate use the volume of orders is small and about what is expected at this time of the year.

Prices For Putty Firm And Unchanged

Montreal.

PUTTY.—Movement of putty continues fairly good, but the orders for large quantities are not in evidence to any extent. Much glazing is being done in the city, and the consequent result is that of a good sorting business from retailers. With a firm tone to the market we quote: Bulk in casks, $3.60 per 100 lbs.; bulk in drums of 25, 50 or 100 lbs., $4.45, and bladders in bbls., $3.75 per 100 lbs.

TORONTO

TORONTO, Nov. 29.—There has been considerable activity in the paint market during the week so far as price movements are concerned. Turpentine has moved upward, following the stronger undertone noted last week. Linseed oil was in firmer undertone as a result of conditions in the flaxseed market. There are heavy receipts of flaxseed in the West at the present, but Eastern crushers are finding it difficult to get seed delivered in the East owing to the transportation situation on the railways. Glass has been moved to higher levels and a firm tone is still maintained, which seems to indicate even higher prices in the near future. White lead in oil and putty are in firm market. There has been a good demand for glass and putty, but mixed paint trade is quiet. Manufacturers of paints are engaged on making goods for delivery next year. Booking business on paints is reported very satisfactory.

Linseed Oil In Firm Undertone

Toronto.

LINSEED OIL.—There was a firmer undertone in the makret for linseed oil during the week, although there was considerable shifting of prices in some quarters. Some of the jobbing houses reduced their prices 2c per gallon during the week, but in other quarters there was a movement toward higher levels on the part of the concerns making the low quotations last week, an increase in this quarter of 1c per gallon having been recorded. Some large dealers were not anxious to sell in single barrel lots, and accordingly raised their ideas on the price. As a result of this shifting in quotations from different sources the net result of the week has been an upward tendency of 1c per gallon on the low quotations of last week, making the range at the present from $1.39 to $1.50 per gallon for raw oil in single barrel lots. A cable despatch from the Argentine stated that owing to frost in that country the estimates of yield have been reduced. It was also stated that negotiations are under way on the part of the Allies to take all the exportable surplus of flaxseed from the Argentine. If this transaction materializes and the Allies get all the seed it will mean that higher prices will prevail for seed in the United States and Canada. This will affect the price of oil in an upward direction. On the other hand, if the Argentine seed comes into the United States market prices may have a lower tendency. A rather peculiar incident of the seed market during the week was the fact that, while November seed showed a

THE great demand for Berry Brothers' Varnishes and Enamels grows greater as consumers realize their economy. They not only produce the most beautiful interiors, but their lasting quality offsets the high cost of labor.

Most buyers realize that labor is the chief item of expense in finishing operations. Those who do not, will thank you for reminding them, as it costs no more to apply "Berry" Finishes that last for many years than the kind that wears out the first year. The difference in the price per gallon is nominal.

Liquid Granite Floor Varnish, Luxeberry Enamels (White, Ivory and three shades of Gray), Luxeberry Wood Finish and Luxeberry Wall Finishes are a few among the many "Berry" products it pays to push because they make permanent customers.

If interested, tear out this page and keep with letters to be answered.

sagging tendency. December and May seed showed an upward inclination. There were heavy deliveries of seed in Winnipeg during the week, no less than 356 cars having passed inspection during the six days. Stocks of seed in the East are light and transportation has not shown any improvement during the week. This is an element that is making for firmness.

	Raw, Imp. Gal.	Boiled, Imp. Gal.
1 to 2 bbls.	$1.39-$1.50	$1.41½-$1.53
3 to 5 bbls.	1.39- 1.49	1.41½- 1.52
6 to 9 bbls.	1.38- 1.48	1.40½- 1.51

Turpentine Shifts To Higher Levels

Toronto.

TURPENTINE.—There was a shifting to higher levels in turpentine during the week when prices were increased from 1½c to 2c per gallon. This upward turn follows as a result of the firm condition that has prevailed in the primary market during the past week. The advance in the primary market of 2c per gallon, as noted last week, has been maintained throughout the week, and this has been the underlying factor in causing higher prices in the local market. Demand for turpentine is light at present. Quotations range from 74c per gallon to 77c per gallon.

	Imp. gal.
1 barrel	$0.74-$0.77
2 to 4 barrels	0.73- 0.76
5 gallon lots	0.81- 0.84

Glass Makes Advance Of Approximately 10%

Toronto.

GLASS, PUTTY.—Following the firmness indicated within recent weeks in these columns an advance in glass has been made effective during the week to the extent of approximately 10 per cent. Discounts have now been changed on single and double diamond glass to 40 and 10 per cent. off list prices on box glass, the former discount being 50 per cent. off list. Cut lights are now quoted at 33 1/3 per cent. off list, as compared with 40 per cent. formerly. The market is still one of firmness, with intimations made in certain quarters that prices are likely to be still higher. There is an intimation from the United States that the manufacture of glass may be prohibited for a period as a means of conserving the supplies of coal and coke for other purposes. If the manufacture is shut off it will mean that glass will be a very scarce article and prices are pretty sure to go higher. There is a firm situation in putty owing to the scarcity of whiting and the continued high price of linseed oil. There has been a good demand for putty within recent weeks, the demand going hand-in-hand with a good demand for glass.

White Lead In Oil In Firmer Undertone

Toronto.

WHITE LEAD IN OIL.—There is a firmer undertone to the market for white lead in oil. While pig lead has not shown any material advance since the turn in the market, it is holding steadily firm around $6.37½ per hundred in the primary market at New York. Some closely in touch with the situation express the opinion that they would not be surprised to see the present condition work out toward higher prices eventually. In the local market, however, there was no change in price and quotations were made on the basis of $16.20 per hundred pounds in ton lots and $16.55 in less than ton lots. Demand is light through the jobbing trade, but paint manufacturers are using considerable quantities in the manufacture of their next season's supply of paint.

Booking Of Mixed Paints Continues Good

Toronto.

MIXED PAINTS.—There is a continued good tone to the market for mixed paints in that booking business is quite satisfactory and up to expectations for this period of the year. As a result paint manufacturers are now busy on their goods for delivery next year. Sorting business is of a very limited nature. The main interest at the present time for the manufacturers lies in a comparison of booking orders week by week with the corresponding periods last year. There is anticipation in some quarters that next year will be a good building year. If this comes about there should be a good season for paints as well.

HOW TO SAVE COAL

(Continued from page 46.)

a fresh fire. Air for combustion should be drawn through the burning bed of coal and, as a general rule, all checking of draught should be accomplished by closing the ashpit damper and opening the check damper in the smoke pipe. The check damper should never be opened until the ashpit damper is closed. The shutoff damper in the smoke pipe may be closed partially in case of an unusually strong draught or to check the fire in mild weather, but, as a rule, this damper should be touched very seldom. Never check by leaving the firing door open.

Before feeding a furnace see that the shutoff damper in the pipe is open and close the check damper. This prevents the escape of dust through the feed door into the cellar.

Keep the ashpit empty. Ashes banked up under the grate prevent necessary air circulation, hinder combustion and tend to warp the grate bars. Remove ashes at least once daily, and be sure to sift all ashes to recover the good coal that has dropped through the grate.

Serious fuel wastes result from allowing soot or ashes to be deposited on the interior heating surfaces. This prevents utilization of the heat in the smoke and gases. Clean flues frequently; with soft coal every other day is none too often to give the furnace a brushing down. One-eighth inch of ashes and soot on boiler surfaces retards heat transfer 25 per cent.

PRACTISING THE DOCTRINE YOU PREACH

(Continued from page 56.)

bear on goods saleable for inside use. These constitute varnishes, wall paints, inside house paints, floor paints, furniture paints, kalsomines, etc. Is it right that these should be overlooked now because Christmas is coming and toys are in vogue? By no means; these paints brighten the home, cheer up the interiors, and add that comfortable tone so desirable during the holiday season and throughout the long winter months following.

What helps then in the sale of paint? A newspaper advertisement? An attractive window display? A neat arrangement of stock? Yes, all of these, but backing them all there must be evidence that the merchant believes personally in the use of these paints. This point can be made clear without any talking whatever—it is only necessary to use the paint on your store front and your store interior. Its frequent use will speak as no amount of talking could. Are you practising the doctrines you preach in regard to the use of paint?

STADCO SEE-SAFE WINDSHIELD WIPER

(Continued from page 45.)

It consists simply of a piece of heavy wire bent into the form shown in the cut, on the wiping arm of which is placed a rubber tube, and on the projection of the hand-hold inside the car is a rubber roller which presses against the glass and holds the wiper tightly on the windshield.

It is claimed that a distinctive feature is that it can either sweep straight across the windshield and clean the entire shield or can be pivoted in one spot if desired.

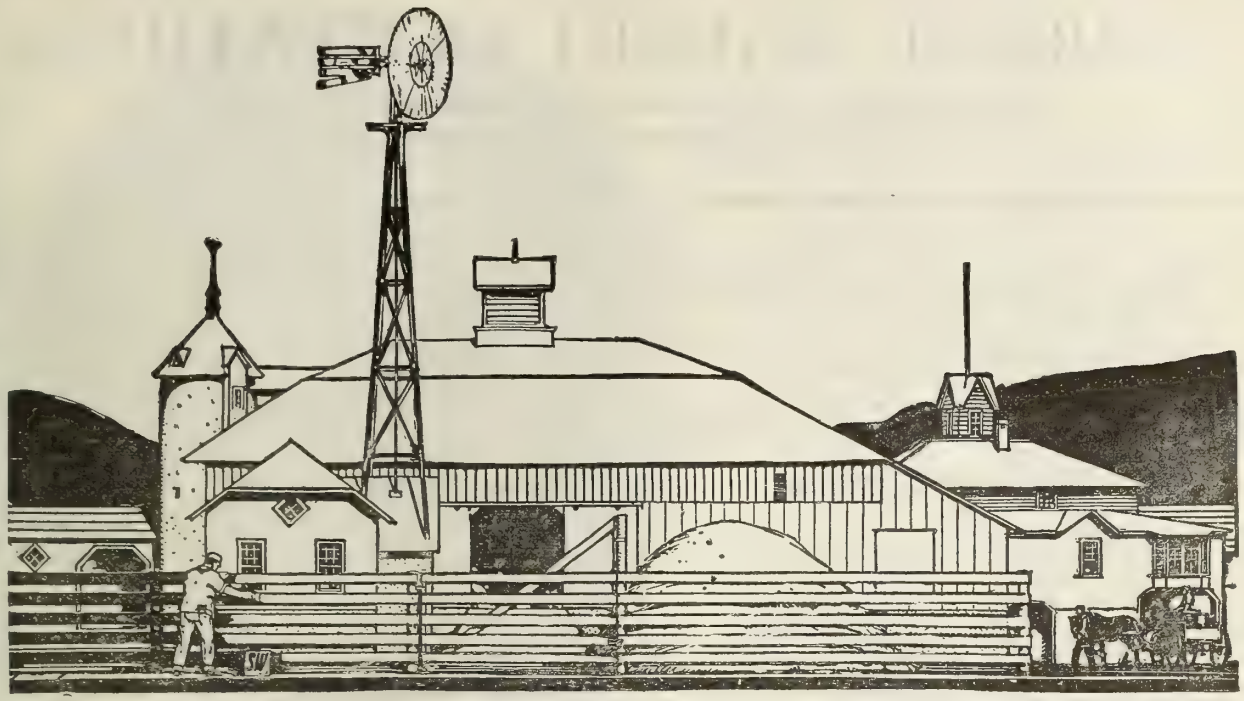
They are packed in a neat counter display box holding 12 wipers.

PITTSBURG MARKETS

(Continued from page 55.)

more general, and regular customers of mills now find little difficulty in placing orders at the set prices against necessary requirements. While the mills in most cases are well sold up, the majority of them can furnish some additional steel to regular customers. The professional buyer or shopper still has his difficulties and is frequently forced to go to jobbers. The jobbers have been coming down to the set margins prescribed by the Institute, as detailed in last report, but a few have not yet completed the readjustment. In occasional instances warehouses operated by producers have quoted a few commodities, including bars, at less than the prescribed margin, but this practice seems to be exceptional.

Some nut and bolt makers have revised certain contracts to the set prices, having found that the contracts in question were not producing specifications, and specifications were needed. The average nut and bolt maker, however, claims he is sold up solidly for several weeks.



The Farmer Needs This Paint

When your customers, from the farm, want paint, they want paint that will combat the attacks of weather to which farm buildings are subjected.

Bear this in mind when selling paint to the farmer.

RAMSAY'S PAINTS

The Right Paint to Paint Right

NOW IS THE TIME TO PLACE YOUR ORDERS FOR THE RAMSAY LINES. THE QUICK TURNOVER AND PROFITS FROM THE RAMSAY FINISHES WILL MAKE YOU WISH YOU HAD BOUGHT MORE

VICTORY BONDS

A. Ramsay & Son Company, Montreal

TORONTO Established 1842 VANCOUVER

Big Market for Brushes

Will you let us say to you that there is a much larger market in every community than is generally perceived. We make a hundred or more different kinds of brushes. For example, there are **Meakins Brushes** for horse stables and carriage cleaning, for garages and automobile needs, for butchers, barmen, stove-makers; for walls, radiators, floors, bannisters, cornices; for kitchens, parlors, schools; for cream separators, gun barrels, bottles.

We do not suggest that you carry stocks or even a sample of every variety of brush, but we do suggest that you have our catalogue and familiarize yourself with our various brushes in order to be able to suggest the right brush to the right person for the right need.

Sell from our Catalogue—Just a last word: Meakins Brushes are good brushes—and our catalogue will tell you why. Our catalogue is valuable. Have you a copy?

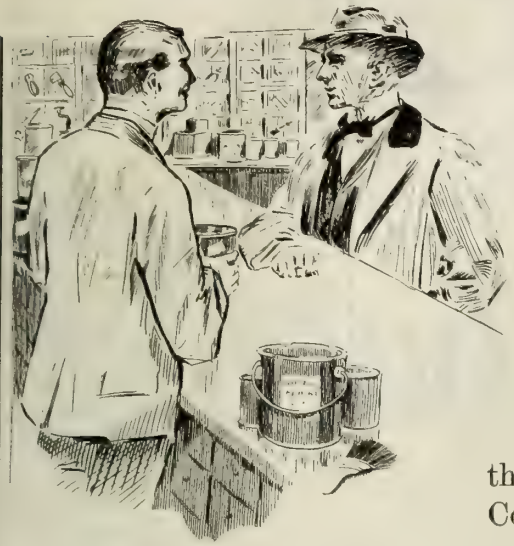
"There's this advantage in painting in the Fall"



Moore's House Colors Give Good Results In any Season.

"The cooler weather means slower drying, and slower drying means a more durable finish."

Here's a strong and reasonable argument with which to combat the prevalent idea that Spring is the only time to get good results from Moore's House Colors. Then, too, the absence of flies and dust is a factor that makes for a more satisfactory job. Moore's House Colors are made from the very best and most lasting pigments combined with Pure Linseed Oil, and the best liquid dryers. Dries hard, but retains sufficient elasticity to prevent cracking and peeling.

BEAVER BOARD

FOR BETTER WALLS & CEILINGS

Build Beaver Board Business
And It Will Build Business For You

Selling paint sells brushes. Selling safety razors brings orders for blades. Every hammer calls for nails.

Just so with Beaver Board. Every time you sell an order of this sturdy wall and ceiling board you'll have a call for paints, varnishes, nails, screws, and other building hardware.

Beaver Board sales are invariably followed by sales of other products you carry. They foretell building or repairing activities that mean much good business for you.

Why not get this Beaver Board business as well as the business that follows? Other merchants in neighboring towns are doing it. They'll tell you that Beaver Board story.

Let us send you their names.

THE BEAVER COMPANY, Limited
422 Wall Street, Beaverdale, Ottawa, Can.
Plants at Ottawa and Thorold, Ont.

IN TWO WAYS

The STENCIL and the PREMIUM

Our "FIRE BOILED" Oil is known from Coast to Coast as "BADEN OIL" and for over fifty years has been the standard by test.

THE OUTWARD MARK OR STENCIL OF FIRE BOILED

THE OUTWARD MARK OR STENCIL OF STEAM BOILED

"STEAM BOILED" is the modern method designed to effect speed in manufacture.

The premium on Baden Boiled Oil over Raw is three cents.
The premium on Steam Boiled Oil over Raw is one cent.

REMEMBER THE DIFFERENCE.

The Best Share For Every Plow

CRESCENT FORGE & SHOVEL CO. TRUE FIT TRADE MARK HAVANA, ILL. U.S.A.

CRESCENT PLOWSHARES

Fit Practically Every Plow in Western Canada

OUR WARRANTY: We warrant all goods of our manufacture to be made of the best quality of steel for the purpose intended, and to be made in a workmanlike manner. Fitted plowshares are warranted to fit the plow for which they are intended. The fit of every share is carefully tested before leaving the factory, and every precaution is taken to prevent mistakes, which occasionally occur. Should any share prove defective in fit, material or workmanship, it will be cheerfully replaced free of charge.

Made in Over 1000 Patterns

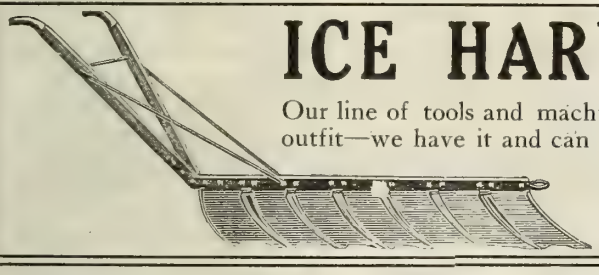
FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly; packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Only through your jobber to-day.



ICE HARVESTING MACHINERY

Our line of tools and machinery is complete. Whether you require a hand saw or a complete outfit—we have it and can fill your requirements.

Get quotations on our sidewalk snow plows and ice levellers for municipal work.

Send for Complete Catalog.

ROBERT DONALDSON & SONS, Montreal

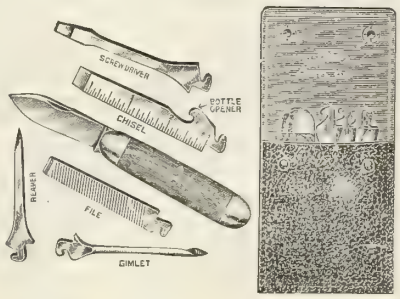
Can You Imagine a Man or Boy

Who Wouldn't Like to Own This Kit?

No matter what a man's occupation may be, he will find daily use for the "So Handy" Pocket Knife Tool Kit. Autoist, Sportsman, Hunter, Farmer, Boy Scout—these, especially, will find it a pleasing and practical pocket companion. Excellent, too, for use around the home.

Outfit comprises a splendid Jack Knife with cocoa handle and an exceptionally good blade, and the following tools which can be instantly attached to the knife handle: File, Chisel, Reamer, Screw Driver, Bottle Opener, Gimlet and Rule, all made of high grade steel, carefully hardened and oil tempered.

The So Handy Kit is made in five styles. Jobbers—get posted about this good specialty.



RETAIL PRICE $1.50.

MACLEAN'S

for DECEMBER

∴ ∵ MACLEAN'S MAGAZINE GETS BETTER ALL THE TIME ∴ ∵

Snipers and Sniping—*by a Sniper*

A SNIPER is back in Canada—a star sniper, who has 34 marks on his rifle, every mark meaning a German life. Most of us know absolutely nothing of the work of the sniper, but the story—a remarkable one—is told in the Christmas (December) MACLEAN'S by the champion sniper of the Canadian Expeditionary Forces. This man was buried by a shell-explosion, was dug out by two comrades, and has lived to tell his wonderful story, in MACLEAN'S. It's worth 15c to get this story alone.

"Politics From Within"

—Leacock, of Course

TRUST Leacock to see a chance for his witty and humorous pen. He deals with the humorous phases of electioneering in Canada in his usual vein.

Why Laurier sent Troops to South Africa

THIS contribution, by Col. John Bayne Maclean, goes backward many years—to the time of the South African War in 1899-1900. That was when Canada first took up arms for the Empire. Politics, of a high order, was back of the decision to send Canadian troops to the Antipodes. It is "inside" history.

Oppenheim—Allenson—McBeth—Mumford

A LONG instalment of **Oppenheim's** absorbing story, The Pawns Count, is given in the December MACLEAN'S. A short story, by A. C. Allenson is seasonable. Madge Macbeth contributes a complete novelette, The Man Who Wasn't. And Ethel Watts Mumford, teller of delightful tales, delicately told, gives us the first of a series of short stories—Love and the Locksmith.

The Usual Popular Departments

THE Business Outlook. The Nation's Business, Women and Their Work, and the Review of Reviews—all are present in strong way in the December MACLEAN'S.

At All News-Stands 15c.

Gadsby's Story of the Union Government

GADSBY is saturated with Ottawa knowledge—much of it of the inside variety. He pokes about, talks with big men; and big men, and lesser ones, talk with Gadsby. Useful sort of man, is Gadsby. What he hears and learns he writes about for MACLEAN'S; and in this story of his about the new Union Government, he reveals the undercurrents on the movement that developed into negotiations, and which finally resulted in a Union Government. Gadsby adds interesting biographical information to his brilliant study.

Robt. W. Service is back again

BACK in MACLEAN'S, that is—in body, he is still in Flanders—where the fighting grows uglier all the time. Service has taken time to write verse for MACLEAN'S. You know well the virility of his style, and the gripping, human character of his verse. It is about life and men in the trenches he writes—about our boys far from us. It is worth something to see our boys as Service sees them. Read "The Shape at the Wheel" in the December MACLEAN'S.

Arthur Stringer writes a Beautiful Christmas Poem

STRINGER is a wonderful man—wonderfully versatile, wonderfully human. He is a master of the short-story and of the detective and mystery type of story; and he can climb the heights of literary endeavor, as he has in this passing sweet poem—Christmas Bells in War-time. Your heart is tender these times of horrible slaughter and of heroic achievement, and you'll be grateful to Stringer for putting beautifully your innermost thoughts and feelings.

OWL

BABBITT METALS

A composition of pure virgin Metals with unusual wearing qualities. Always specify Owl Brand. Made in the West by

THE OWL METAL CO., LTD.
WINNIPEG, MAN.

PROGRESSIVE HARDWARE MERCHANTS all over Canada handle

"WAKYTE" Closets

The reason: More money for the dealer—better satisfaction for the purchaser.

Their special construction cuts your freight charges in half. Superior Quality and low prices make them a quick seller, and their great durability ensures absolute satisfaction to the purchaser. "Wakyte" Dealers can meet competition from any source, and offer far more value for the money.

This is the time of the year to sell "WAKYTE" Closets, and you cannot make money faster than by putting in your stock NOW.

Wakyte Mfg. Co., Limited

MYERS TANK PUMPS
EASIEST TO OPERATE
The Patented Cog Gear Head, as used on Myers Tank Pumps saves one-third of the operating power.
The valves are each located under a removable, individual cap, where they can be easily reached.
The purchaser buys the most service when he buys a Myers Tank Pump. Write for booklet.

PEERLESS ORNAMENTAL FENCING

A Big Trade Is Waiting for You.

YOUR business will jump to the front the minute you display Peerless Fencing. In price, quality, designs and actual worth you can guarantee every foot of it. We stand back of you.

Open hearth steel wire, crimped springy horizontal wires combine to make the Peerless fence outlast ordinary kinds of fencing. Defies rust, holds unruly animals, can't sag, can't break down and is the last word in economy.

Send for Dealer's Proposition

Get our illustrated literature showing the big line for residence, park, cemetery, farm, ranch, poultry yard and all purpose fencing and gates. Write today.

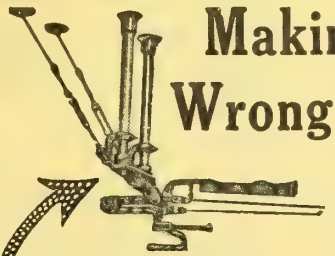
BRANTFORD

The
Superior All Round
GLUE

You'll find that Glue sold in packages meets with much favor with the consumer—that's "Brantford" Glue. Very economical. Put up in ¼, ½ and 1 lb. packages.
Buy from your jobber.

CANADA GLUE CO., Limited - - Brantford, Ontario.

Making the Wrong Change



It's done every day, and the chances are you get the worst of the error-making. But you don't want errors; you want accuracy. Will you allow us to send to you, in the form of printed matter, the remedy for wrong change-making. And you'll get some brand new ideas about store keeping. Costs but a post-card for request.

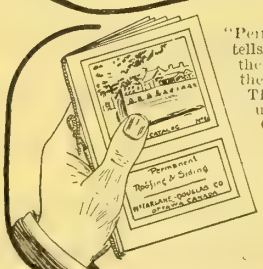
Read this Book and know the perfect roofing



"Permanent Roofing and Siding" is a book that tells you all about "Crown" Metal Shingles—how they're made—what they're made of—how to lay them—why they wear so well—why they make THE PERFECT ROOF. It also gives some useful information on "Crown" Sidings and Corrugated Iron.

This helpful book is yours for the asking. Will you write for it to-day?

To Our Readers,

EVERYWHERE IN CANADA

The buying of Victory Bonds is a very different matter from parting with your money, even for a splendid patriotic purpose.

You are not subscribing, or donating, or paying out money in any form. You are merely saving your own money, investing it in the very safest way, at the highest rate of interest ever paid in our lifetime in this country for such a high grade security. Never has a better opportunity for investment been offered in Canada for wage-earner, salaried man, or the man in business for himself, than Victory Bonds.

After Life Assurance good bonds are, I consider, the best form of money saving for wage-earners or persons on salary.

For those in business for themselves, and for retailers in particular, the buying of Victory Bonds offers the ideal means of using surplus earnings to provide the cash reserve that every business should have.

Experts estimate that ten years hence our twenty-year Bonds should sell for $110 to $112. They will thus yield over 6½ per cent.

John Bayne Maclean

Starrett Hack Saws are Unexcelled Just as Starrett Tools are Unexcelled

Mechanics come to your store to buy Starrett Tools because they know there are none finer, none more accurate, none more dependable. It's the same with

Starrett Hack Saws

Whether your customer wants these saws in large quantities for a big shop or in smaller numbers for occasional use, you can show him that he buys more than a good hack saw; he buys the right hack saw, the one best fitted for the job.

The right hack saw cuts quicker, thereby saving valuable time. It lasts longer—doesn't dull as quickly, doesn't break as easily—thereby saving money because fewer are required.

Our catalog No. 21MA describes the hack saw that is unexcelled and tells both you and your customer how to pick the number of saw that will do the best work on any given job.

STARRETT HACK SAWS CUT QUICKER LAST LONGER

DUNLOP AUTO TIRES

With so many low-priced so-called anti-skids obtainable, would that great host of motorists pay more for

"Dunlop Traction Tread"

if they could get its merits elsewhere?

Also, would that other large list of car owners buy

"SPECIAL"

if tires which somewhat resemble it in appearance resembled it in efficiency?

Dunlop Auto Tubes

Every Dunlop Tube is seamless—therefore, perfectly air-tight. The method of making them is automatic—cannot go wrong. Elasticity stays with Dunlop—so do countless motorists.

Dunlop Tire Accessories

Like Dunlop Tires and Tubes, Dunlop Accessories are thoroughly dependable.

Besides being practical and readily adaptable, the range is wide to cover every need at prices no higher than what Auto owners have to pay for other kinds.

Ally yourself with the Dunlop Line

Dunlop Tire & Rubber Goods Co., Limited

HEAD OFFICES AND FACTORIES: TORONTO

BOWSER

You Oil Room Can Look Like This

And when it does, you can be sure that your paint oil department is systematized and will pay the profit it should. Just so long as you cling to the old tin tank and barrel method of storage, you are selling paint oils at a disadvantage and loss. Why not end wrong conditions immediately by installing a Bowser Paint Oil Storage System, and place this important part of your business on a safe, clean and profitable basis? Bowser Systems cover any oil storage requirement; keep oils in perfect condition; prevent waste, dripping, over-measure and oil-soaked floors; deliver accurate quantities and you always have a record of oils purchased and sold.

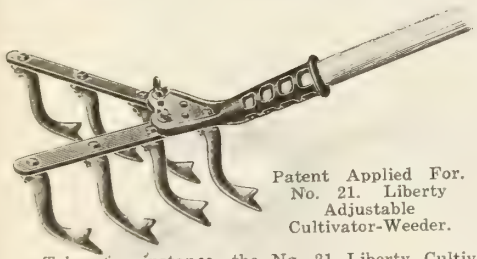
Every Amateur as well as Every Professional Gardener



Patent Applied For. No. 21. Liberty Adjustable Cultivator-Weeder.

will quickly recognize the labor-saving features of Gilson Garden Tools.

Take, for instance, the No. 21 Liberty Cultivator-Weeder, an implement of double efficiency, which cuts weeds and cultivates at the same time. It is adjustable, with a minimum width of 4 inches and a maximum of 10. The middle tooth can be quickly removed to allow of working on both sides of a row at once. Fitted with 5-ft. polished ash handle, shipped 6 to a crate, weight 24 lbs.

Our 5 and 7-point Scratch Weeders, with 6-inch and 14-inch handles, are ideal tools for close work in beds or for greenhouse work. The pointed tines are self-cleaning and will not clog in moist earth.

Every Gilson Garden Tool embodies some special feature, and for that reason sells more readily than the ordinary tool.

Ask your jobber. If he cannot tell you, write us direct for information on all our lines.

Patent Applied For. 5 Pt. Scratch Weeder. 6-in. handle.

J. E. GILSON CO.

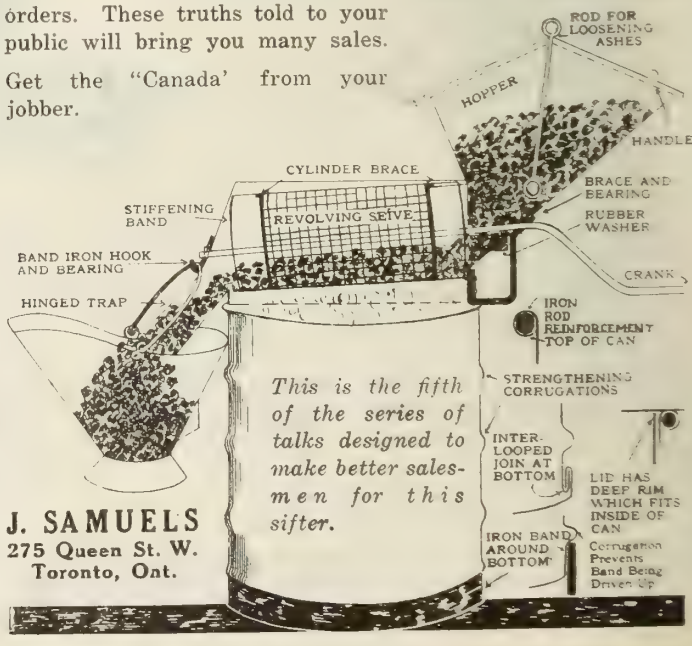
Port Washington, - - Wisconsin, U. S. A.

SAMUELS' "CANADA" Dustless ASH SIFTER

Tell Them the Truth Only

Give your public a few plain truths about Samuel's "Canada" Dustless Ash Sifter in your advertisement in the local paper. You will not require to tell anything but the truth—it's the truth about the "Canada" that is keeping us busy filling orders. These truths told to your public will bring you many sales.

Get the "Canada' from your jobber.



This is the fifth of the series of talks designed to make better salesmen for this sifter.

J. SAMUELS
275 Queen St. W.
Toronto, Ont.

Wanted

SITUATIONS VACANT

WANTED — EXPERIENCED HARDWARE clerk for live business in large Saskatchewan town; must be a hustler; permanent position for right man. Apply Box 502, Hardware and Metal, Toronto, or Winnipeg preferred.

WANTED — CLERK WITH ABOUT TEN years' experience, for country retail hardware store; must be a salesman. Box 173, Lougheed, Alta.

FOR SALE

HARDWARE BUSINESS FOR SALE IN GOOD town in South Ontario; been established 40 years and a money maker; stock, $9,000, but can be reduced. Owner retiring; move quick if you want a good business. Apply, Box 505 Hardware & Metal.

Twelve Cents Per Word!

Several weeks ago a firm in Vancouver, B.C., telegraphed a want ad to Hardware and Metal. They wanted a clerk in a hurry and wished to catch the earliest issue.

The cost of a telegram from Vancouver to Toronto is ten cents per word, added to this was our charge of two cents per word.

This firm had faith enough in Hardware and Metal's Want Ad column to pay *twelve cents per word,* for an announcement in this column. This little story speaks for itself. Mail or wire your want ads, we will accept them until Thursday noon for the current issue.

Hardware and Metal Want Ad Dept.

This page is the logical place for anyone in the Canadian hardware trade to place his "condensed" advertisements if he wants anything that can be supplied by any other Canadian hardwareman.

Do you want a clerk or store manager?

Do you want a position as clerk or travelling salesman?

Do you want a traveller?

Do you want to sell or exchange your business?

Do you want to buy a hardware business?

Do you want to buy or sell any store equipment?

If so, sit down now, and draft an advertisement for Hardware and Metal's "Wanted" page, setting forth just what you want, and stating your needs or qualifications.

Such an advertisement will automatically seek out for you, the only people you want to reach—those who are actively engaged in selling hardware, in Canada.

The cost?

Trifling! Two cents per word for first insertion and one cent per word for each subsequent insertion of the same advertisement. Each figure is counted as a word, and a charge of 5 cents extra per insertion is made when Box Number is required. In this way the advertiser's name is kept confidential.

Copy for Condensed Advertisements should reach the Toronto office of Hardware and Metal not later than Thursday morning to catch the current week's issue. In order to save unnecessary correspondence and bookkeeping, please remit with copy, preferably by money order.

MISCELLANEOUS

ADDING TYPEWRITER WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314 Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT EVERY employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B," Otis-Fensom Elevator Co., Toronto.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

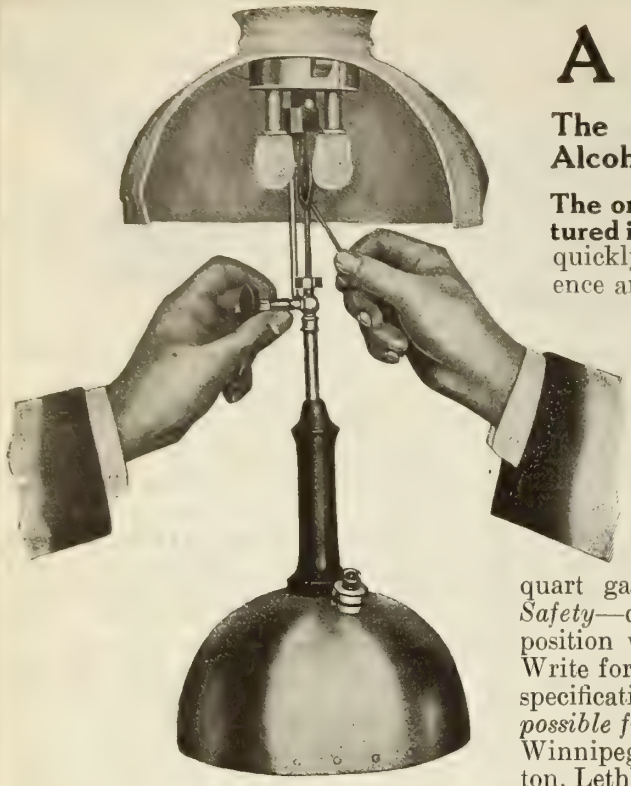
IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

Trade Papers are Pioneers of Business Expansion

Getting Results

A large firm in a Western Canada city recently advertised in Hardware and Metal Want Ad. Page for a man to fill a responsible position—result 21 replies. This indicates that the want ad. page is followed closely. The man YOU want to reach is reading this page.

A QUICK SELLER!



Here is how it is lighted

The Lamp that threw the Alcohol Torch into the discard.

The only Gasoline Lamp manufactured in Canada. This lamp will sell quickly because of its great convenience and economy.

Illustration on left shows the method of lighting the modern

"MATCH-O-LITE" LAMP

It needs no torch. Uses no alcohol. One match lights it. Burns for 15 hours on 1 quart gasoline. 300 candle power. *Safety*—can be held in upside down position without fear or danger.

Write for circular giving styles and full specifications—then *order as early as possible from* your nearest wholesaler in Winnipeg, Saskatoon, Calgary, Edmonton, Lethbridge or Vancouver and cover yourself for Fall and Winter requirements.

DOMINION SHEET METAL CO., Ltd.
HAMILTON, CANADA

"I prefer prevention"

"Accident insurance is a good thing, of course. I always carry it. But what about my wife and children? All the money in the mint wouldn't pay for my injuries to them, and they seem to think the same way about me.

"It's prevention for mine—it's better than regrets. The only safe thing to do when slippery roads are in prospect is to prevent accidents, and the one best way to do it is to equip with Dreadnaught Chains. There may be other good chains, but none could be better than the Dreadnaught, and price is always a consideration."

We make the definite claim that no chain at any price is better than the Dreadnaught, and that no other chain at the Dreadnaught price is as good.

The cross chains are case hardened; hard as diamonds on the surface, tough as copper at the core.

Links are electrically welded, making a smooth joint.

This saves tires.

The long lever rim chain fastener is a Dreadnaught feature exclusively.

MARTIN-SENOUR
100% PURE PAINT & VARNISHES

THE QUALITY NEVER CHANGES

PIONEERS of PURE PAINT

And Still First in the Estimation of Paint Users

ECONOMY

"The Nation's Watchword"

The nation's watchword can be made especially effective by the CONSERVATION OF WHAT WE HAVE.

One of the country's greatest assets is its property holdings in the form of homes, factories, schools, churches and all classes of buildings. The use of expensive materials has been necessary in their erection.

It is therefore essential from the standpoint of TRUE ECONOMY and conservation that these buildings should be GUARDED AND PRESERVED against the disintegrating effects of time and weather BY PROTECTING COATS OF GOOD PAINT.

In these times of higher prices, property owners are more keenly interested in procuring the FULLEST MEASURE OF VALUE when making necessary paint purchases.

MARTIN-SENOUR
PAINTS AND VARNISHES

Universally recognized as the HIGHEST QUALITY LINES, although sold at no higher prices than inferior brands, provide the property owner with this FULLEST MEASURE OF VALUE.

This value is fully assured by an ABSOLUTE GUARANTEE of satisfaction, which protects both the dealer and user of 100% PURE PAINT or any other Martin-Senour product.

This story of MARTIN-SENOUR QUALITY AND SERVICE is truthfully and widely made known through the most largely circulated publicity mediums and the strongest local and national advertising ever used by any paint manufacturer in Canada.

In fact NOTHING IS LEFT UNDONE to make selling and using Martin-Senour products a pleasure and satisfaction. And that is just why THEY ARE THE EASIEST AND MOST PROFITABLE TO SELL.

Better become one of our satisfied, successful, exclusive dealer agents NOW.

Store Door Handles

Sectional Type

THIS trio of sectional trims is representative of the range of door handles of the sectional type manufactured under the "To-Lo-Co." brand, handsome trims, with artistic lines and superb finish suitable for and used extensively on Stores, Public Buildings and Residences.

THIS style of handle can be used on any lock in which the latch bolt is arranged for operation by a thumb-piece.

ON the outside the trim consists of three plates—one surrounding the cylinder, the other two serving to support the grip or handle.

THE inside is trimmed with a knob and rose to operate the latch bolt, and a thumb knob to operate the dead bolt.

Immediate delivery from large stock. If you desire Spring delivery send specifications at once. Write now and secure your copy of new "TO-LO-CO" Catalog which will be ready for distribution by January First. It covers the complete range of hardware which we manufacture, including: Rixson Door Checks, Checking Floor Hinges, Builders', Cabinet, Refrigerator and Structural Hardware.

GOODS TO PUSH

UNIVERSAL

Food Choppers, Bread Makers Coffee Percolators

Food to-day costs money. We are all out to make this food go just as far as possible. Universal Food Choppers, Bread Makers and Percolators conserve food. We have spent thousands of dollars to impress this fact.

By the use of the "Universal" Food Chopper the left-over bits of food are made into delicious and appetizing dishes and the price of the chopper is saved in no time.

With the "Universal" Bread Maker whole wheat, rye or graham bread is made with the same certainty and ease that white bread is made.

The "Universal" Coffee Percolator makes delicious coffee without boiling. Saves you one-third on your coffee bill because every bit of flavor is extracted from each grain of coffee.

Realizing these facts, housewives everywhere are buying these goods. Put these articles where they can be seen and handled—it won't hurt them,—but will sell them.

Your jobber will be pleased to furnish you with Universal show cards.

LITTLE WORDS WITH BIG MEANING

Quality

According to "Webster," Quality is "an excellence of character; natural superiority."

Service

Webster's definition of "Service" is; "The performance of labor for the benefit of another."

We use these words advisedly—fully understanding their definitions—and realizing the obligation we place upon ourselves by their continued use in connection with our products of Iron and Steel, and our attitude to the people we serve.

FIVE FACTS ABOUT FAMOUS FIVE FILES

They are made from High Carbon Steel.

The heat treatment of each file is scientifically determined.

The grinding is done by machinery, which insures a perfect surface for cutting.

The teeth are mathematically accurate, insuring a sharp, even cut.

They are recognized as standard tools by mechanics everywhere.

Be on the safe side, therefore, and specify "Famous Five" Files when ordering.

Order Yours Now Be Prepared

Each of the three Freezers, LIGHTNING, GEM or BLIZZARD, has served the housewives of America for thirty years, and, like the cream they create, are in demand in all seasons.

They are built of the very best material and workmanship possible—their ingenious construction makes them easy to operate, quick freezing, and economical to both dealer and user.

The Blizzard, being simpler in construction and cheaper in price, makes it a good running mate with either the Lightning or Gem. They sell themselves and stay sold! No comebacks or complaints.

This means easy, net profits for you. Your jobber will supply you.

Include the Lightning Ice Chipper. It helps the sale of Freezers.

Starrett Hack-Saws

STARRETT HACK SAWS CUT QUICKER LAST LONGER

In a shop such as this, the machinists use many Starrett Tools. With our reputation for fine precision tools, we could not muster up courage to put our name on a hack saw that is second to any obtainable. We know that

Starrett Hack Saws Are Unexcelled Just As Starrett Tools Are Unexcelled

We make them in our own shops; in the same plant with Starrett Tools. We know what steel they are made of. We know what they will do, for we test saws all the time under known conditions. With us it is test, test, test—to find out just what constitutes the best saw for this work or for that.

There is no question about the quality of Starrett Hack Saws. The only question is what numbered saw you should recommend, and this question is easily answered by referring to page 208 of our Catalog No. 21MA, which shows what saw to use for any particular work.

Wherever a Unit Battery is required

North Star Multiple Ignition Battery is a unit battery in a thoroughly waterproofed case. From four to twelve individually tested cells, each of which is entirely surrounded by insulating compound, are connected by soldered copper strips. It is only necessary to connect two wires to the binding posts to put the battery in operation. North Star Multiple gives in compact, easily-handled form the necessary voltage for heavy intermittent ignition. For motor boats, auto and carriage lighting, blasting, barn lighting, etc., North Star Multiples are ideal, and will give unlimited satisfaction.

In ordering from your jobber, always specify "North Star Multiples."

One Agent sold 25 "Reliable" Churns in One Week

The "Reliable" Churn appeals immediately to any one who has churning to do. The woman who churns knows that the old dash churn gives best results—and the "Reliable" is simply "a dash churn with a college education." The old dash principle has been combined with a simple, effective crank mechanism that eliminates the labor and gives the same results in shorter time. The "Reliable" is the only churn which gives perfect results when filled to 80 per cent. of its capacity.

"Reliable" Churns are being described regularly in the advertising columns of rural publications all over Canada. Your people know of the "Reliable." It simply remains for you to "follow up" and make the sale.

If one of our agents could sell 25 "Reliable" Churns in one week, how many can you sell? The first step towards answering this question is to

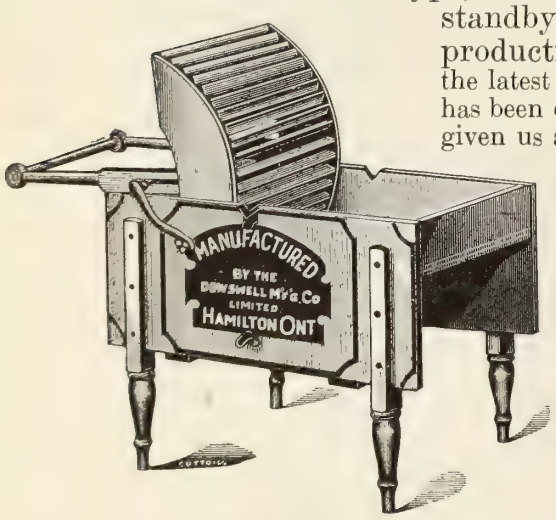
New Firm—New Plant

We here introduce to our many friends and customers from the Atlantic to the Pacific the new company of DOWSWELL, LEES & CO., LTD. (formerly Cummer-Dowswell, Limited), and the new enlarged plant. It is now over a quarter of a century since the first DOWSWELL Washer was turned out in the little 30 x 100 ft. plant. The only line then manufactured was the Rocker type, as here shown, and which, by the way, is still the old standby, and one of the best selling lines of the factory production—which has grown until it now comprises all the latest improved types of Hand and Power Machines. The plant has been extended many times until the latest addition this year has given us a total floor space area of about 100,000 sq. ft., completely fitted with the most modern machinery and appliances to facilitate rapid production without lowering the standard and quality. With the new organization comes new aims, and new policies which will tend to better if possible the service.



We assure our many patrons that their orders will have prompt attention and take this opportunity of thanking them for their past favors.

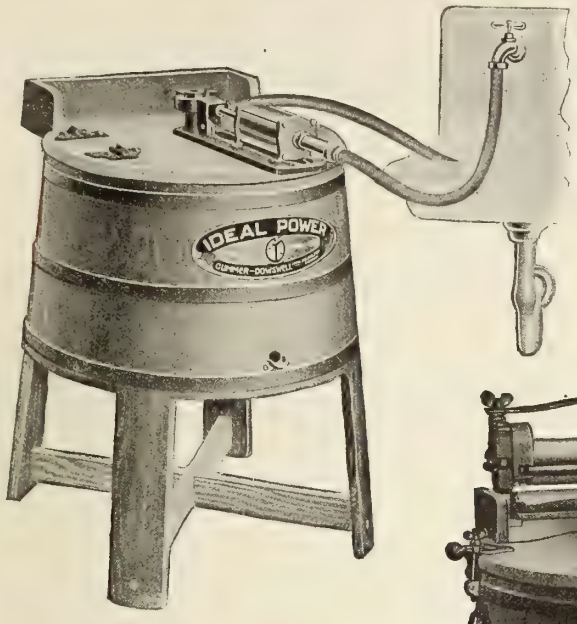
IDEAL WATER-POWER WASHER

(To Right)
Is the machine that runs itself. Simply turn the tap on and the Washer does the rest. Every Motor is subjected to two rigid tests, one before and one after attachment to the tub, and this assures it being in perfect working condition when it leaves the factory.

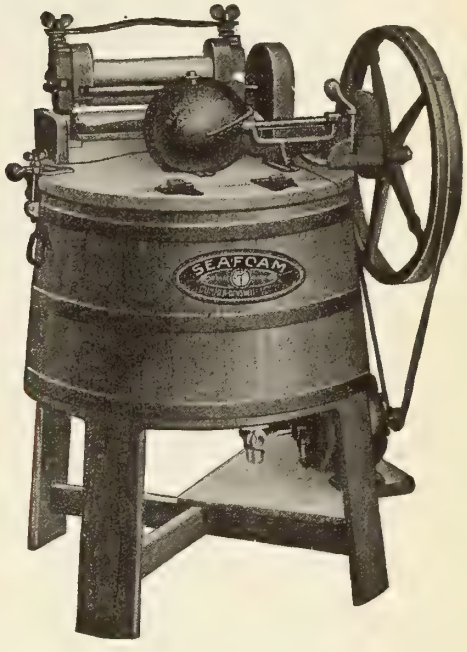


SEAFOAM

Style "A"

Electric-Power Washer and Wringer

(Below)
Wrings while it washes, washes while it wrings. Equipped with first-class ⅛ H.P. Electric Motor. The Machine for use anywhere electric current is available. Very simple and very strong. Just turn on the power and the Machine does the work.



PLAYTIME

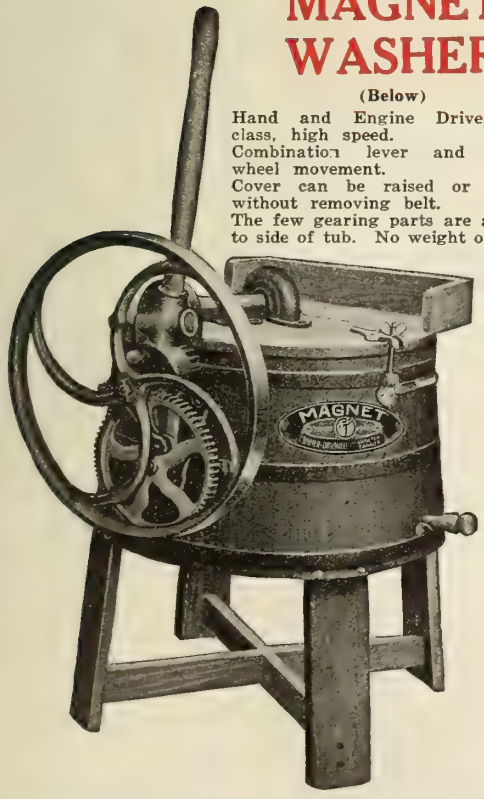
Style "B"

Hand or Engine Drive Washer

(To Left)
Can be operated by hand or driven by Gasoline Engine. Noiseless construction, all metal parts coming in contact with water heavily zinc coated. Have one on your floor and introduce it to the farmers.

MAGNET WASHER

(Below)
Hand and Engine Drive, high-class, high speed.
Combination lever and balance wheel movement.
Cover can be raised or lowered without removing belt.
The few gearing parts are attached to side of tub. No weight on cover.



A Quartette of DOWSWELL LEADERS

With household labor becoming more scarce every year the necessity for a good Washing Machine in every home in Canada is apparent.

The merchants realize this and are arranging to meet the demand for the coming year.

Send in your orders at once to insure early delivery.

Apply a Cost System to Your Business

A Cost System is Simple as This Article Shows—A Knowledge of the Cost of Doing Business is Both Satisfactory and Essential—It Causes the Merchant to Speed Up Sales and to Abandon Cut-price Sales—Getting a Profit on Effort as Well as on Capital—This in Addition to Your Salary.

By John C. Kirkwood

THE very first thing to be done by the man who would know his selling costs is to know and record the various items that together constitute the cost of doing business. To know and record these items calls straightway for methodical accounting. Fortunately the separation, calculation and recording of the various items constituting selling cost are exceedingly simple operations, within the ken and ability of any man.

To ascertain the cost of doing business:

1. Charge interest on capital.

Charge the rate of interest it would earn if invested in gilt-edge mortgages or bonds, say 6 per cent. By capital is meant net assets—inventory, cash, accounts receivable.

2. Charge Rent.

Charge rent even if you own your premises. Should this be the case put down as rent the amount they would bring if occupied and used by another—say 8 per cent. of market value, plus repairs, taxes, and water.

3. Charge Your Own Salary.

Put down an amount representing your salary worth to your business—a sum probably double that paid your highest paid employee. Include in this the worth of the services of any member or members of your family not on the pay roll, yet who render business a service worth real money.

4. Charge Salaries of Hired Help.

Omit from this, if you are so minded, the salaries or wages of the one or more engaged mainly or solely in the work of delivery, charging such wages under the item of delivery.

5. Charge Fixed Expenses.

Included here are such determinable or known items as insurance (fire, casualty, plate glass, partnership), taxes, telephone rental, water rates, light and fuel.

6. Charge Freight.

Include here freight and express on incoming goods; the cost of packages or packing, drayage; duty paid (if any).

7. Charge Delivery.

Include here wages of drivers or messengers; horse and wagon, or motor car; stable or livery or garage items; repairs, supplies, freight and express items on outgoing goods, wrapping papers, packing, twine, etc.

8. Charge Incidentals.

Include here stationery and office supplies, postage, telephone calls, telegrams, exchange, cleaning, miscellaneous repairs, etc.

9. Charge Advertising.

Include here newspaper and other forms of publicity, including printed matter, catalogues, novelties and other disbursements properly coming under this head.

10. Charge Donations and Subscriptions.

Include here special discounts or allowances made, or goods given in the name of charity, benevolence and good-will.

11. Charge Losses.

Include here bad debts, shrinkage, leakages, shortages, thefts, spoilage allowances, discounts, and losses not provided for elsewhere.

12. Charge Interest Paid.

Include here interest paid on borrowed money, and interest lost on uncollected book accounts, and cash discounts forfeited because of inability to take them.

13. Charge Depreciation.

Include here the depreciation on buildings owned and employed by you in your business; and depreciation on furniture, fixtures, horses, vehicles, stock, etc.

Here one has a baker's dozen of headings under which to record the many items that constitute, when aggregated, the annual cost of doing business.

Many take stock on or about January 1. If this is your practice you will be in an excellent position to begin right away doing business on the basis of the known cost of operating your business.

Success is becoming more and more dependent on a knowledge of the cost of doing business and on intelligent, purposeful and successful effort to recover this cost plus a profit on your effort.

The accompanying article will prove very helpful to those who want to be successful merchants. The matter is set forth lucidly and soundly, and we sincerely trust that many of our readers will resolve and keep their resolve to conduct their business on the basis of known and actually recovered costs, plus a desired profit on effort.

Easy to Record Selling Costs

With these headings and helps it should be a simple matter for any dealer to set down his selling costs, day by day, week by week, month by month, quarterly, semi-annually and annually.

Each individual disbursement has to be recorded sometime, somewhere, somehow. Why not record it in its right place at the right time and under its proper heading? Thus will the dealer have the record or records necessary and desired. He will know then just what it is costing him to run his business.

Costs Studied More Closely

In the foregoing presentation of group headings some may possibly be merged with others. For example, Advertising may be included under Incidentals; and Interest may be included under Losses. Donations and Subscriptions may be included under Incidentals. But there is an advantage in the separation of these several classes of expense: They reveal boldy, challengingly and perhaps shockingly classes and amounts of expenditures capable of reduction, and perhaps calling for reduction.

Also in the foregoing presentation of the factors of selling costs, Freight on incoming goods is included. Many will

say that Freight, Express, Drayage and Packages or Packing should be added to the invoice price immediately; and in saying this they are quite correct. But not always is this class of expense included in the marked cost price of goods.

DO YOU KNOW?

A competent authority has, by careful investigation of over 1,500 *retailers in each line, and in every section, developed the following facts:*

	Turn Stock per year No. Times	Cost to Do Business Per Cent.
Grocers	10	16
Dept. Stores ..	7	26¼
Druggists	4	24¾
Dry Goods	4	24
Hardware	3½	19½
Furniture	3	24
Shoes	2	23¼
Clothing	2	20¼
Jewelers	1½	25¾

On articles of heavy weight—such as sugar, nails, coal, for example—the freight expense is immediately added to the invoice price by all wise dealers, but on many lines the practice of many dealers is to ignore in their cost marking the item of freight, or delivery-to-store expense. Accordingly, in the enumeration of the factors of cost, as above, Freight is set down, and when this annual aggregate expense is reduced to a percentage of sales, it can quickly be added to invoice prices. For this reason is Freight on incoming goods included among the factors of costs.

Recovering One's Losses

Under the heading of Losses are to be assembled all such expenses and losses not properly belonging under other headings. Bad debts should be charged here, for so will they be recovered by being assessed against all customers as a whole. Leakage, shortage, shrinkage and spoilage should be charged here, for thus will their costs be recovered.

The average dealer treats bad debts, leakage, shortage, shrinkage and spoilage as irrecoverable, but this view and practice is unsound and dangerous. All such losses should be charged into the cost of doing business, so they may be collected and recovered.

Leakage, shortage, shrinkage, and spoilage, in the aggregate, may amount to a very considerable item, and are incident to the doing of business, to providing the public with a service needed and desired by them. Therefore the public as a whole—the dealer's customers as a whole—should pay for such losses.

When Goods Are Sold Below Cost

Under the heading Losses can be included the loss sustained in the sale of staples that do not and will not, as things are, bear their proper percentage of advance to cover the costs of doing business. Sugar and nails are two familiar and common examples of merchandise which sell retail at a very small percentage advance on invoice cost. Suppose that the actual cost of doing business is 25% of the invoice price, and a staple sells at an advance of only 10% on invoice price, then there is a clear loss of 12% on the annual sales of this particular commodity. The total loss, as represented by this 12% loss, should and must be recovered, and, therefore, must be collected in the sales of merchandise on which can be imposed the full costs of doing business.

Interest on Outstanding Accounts

Under the heading of Interest Paid there should be included the interest lost on outstanding accounts. These accounts may total, say, $1,000 at any and all times during the year—this in a business done on a capital of $5,000 or so. They represent non-earning capital. But capital should bear interest. Reckoning interest to be earned at 6%, there would thus be an item of $60, when the average amount outstanding is $1,000, to be charged as an operating cost.

WHY BUSINESS MEN FAIL

According to a statement by Edward N. Hurley, vice-chairman of the Federal Trade Commission, there were 22,000 *failures in the United States in* 1915. *Ninety per cent. of them resulted from cut-throat competition prices. In an investigation made by the commission since its appointment,* 200,000 *out of* 260,000 *firms had no method of determining cost; of these,* 100,000 *firms did not earn a penny, and little, if any, provision had been made for depreciation. In another survey of a national industry it was found that twenty-seven large corporations, representing an investment of* $12.500.000 *and annual sales of* $8,000 000, *had earned only* $300,000—*a little less than* 3 *per cent. on the capital stock, and altogether they had charged off only* $69,000 *for depreciation. The number of small businesses run on odds and ends or on bank check stubs is amazing*

Providing For Depreciation

Under the heading of Depreciation should be included all items relating to property, furniture, fixtures, and delivery equipment whose inventory value diminishes each year through use, loss of style, etc., wear or damage and which in the course of time require to be discarded or replaced. The percentage amount of annual depreciation for each article or possession will probably vary, being 5% in the case of a possession good for 20 years, 10% in the case of a possession good for 10 years, and 20% in the case of a possession likely to require replacement in 5 years.

A special bank or ledger account should be opened for charges of this sort—a sort of sinking fund account, which can be reckoned as capital. In this way the money necessary for replacing worn out or useless or valueless equipment will be provided systematically, and will be instantly available when needed.

Recording the Items of Cost

The thing remaining is the essential thing—the recording of these costs methodically, fearlessly, and accurately —and in recovering them from sales. This is the hard thing—hard because of the average business man's lack of system, will power, resolution and well-disciplined habits. You can lead a horse to the water, but you can't make him drink. You can show a merchant how to ascertain and recover his selling costs, but you can't make him record and get them back. It is a matter for the individual himself whether or not his performances shall be in accord with his knowledge and conscience. At the same time it is earnestly hoped, now that retailers have been shown how to ascertain, record and recover selling cost, that many of them will become possessed of the purpose, resolutely maintained, to conduct their business intelligently, knowingly, with full light on matters that aforetime may have been hidden in darkness.

Getting a Profit on Effort

In what has been said, the matter of getting a net profit on one's effort has not been considered. Provision has been made for a salary for the proprietor or partners; but the matter of a profit over and above all costs of doing business is a thing by itself. The desired profit—$1.000, $2.000 or so—must be added to the costs of doing business as above defined and elaborated, and the sum of the costs of doing business and the profit on effort desired will give the merchant the full sum he must obtain in a year over and above the invoice cost of goods sold. For calculation purposes the cost of doing business should include the sum one desires as profit on his effort.

Sales Must be Stimulated

But putting down all costs and adding the profit or effort desired is not any guarantee or pledge that the merchant will get this gross sum. To get this sum he must sell enough goods—must have a minimum annual turnover,

STOCK AND HOW TO KNOW IT

You must know your stock and its weaknesses at all times.

You may be passing merchandise through your place of business at a loss.

The only system which successfully stands the test is organized, systematized and daily visualized business.

The wiser the man and the better the institution, the closer is everything watched, and the less guessing indulged in.

The easiest way to take stock is to prepare for it.

and must obtain an advance on invoice cost of goods sold sufficient to give him all costs plus the profits.

Suppose, for example, that the costs and profit, as above set forth, total $5,200 in the year, or a neat $100 a week. Then it becomes clear that the merchant must sell enough goods each week, on an average, throughout the entire year, to give him $100 a week above the invoice cost of his goods. Suppose his average advance on cost is 25%, then it means that his average weekly sales must be $500, of which $400 will represent invoice costs, and the other $100 the gain over cost. $500 a week sales means an annual turnover of $26,000.

If the merchant averages only 20% advance on cost, then it means that to obtain weekly $100 above invoice costs, he must have average weekly sales of $600, made up of $500 invoice costs plus $100 advance. In this case his turnover would require to be $31,200.

So it becomes clear that if turnover (goods sold) falls below $26,000 in the one case, or $31,200 in the other case, the costs of doing business, plus the required profit for effort, are not obtained.

When the merchant perceives in advance—which he can—just how much he must sell yearly and weekly to recover his costs and obtain his desired profit, he knows just what effort he must put forth to keep up sales to the necessary weekly minimum. Certainly he dare not go on, trusting to luck, as so many do; nor will he be content with just hoping and trusting; on the contrary, if he is made of the right stuff, he will speed up his sales and his sales staff, and begin to study his business as never before. He will do his utmost to swell the sales of goods on which he can obtain an advance over invoice cost of 30%, 40%, 50% or more; and he will not be over-eager to spend much time, or have his staff spend much time, in selling goods on which only 10% or 15% or so is obtained over invoice cost. Also, he will not be very enthusiastic about bargain sales or clearance sales when ordinary or regular prices surrender all or nearly all the advance over cost contained in them. Big turnover in which there is insufficient advance on invoice price will look less good than a smaller turnover which contributes an adequate advance over invoice cost.

All this goes to prove that being a real, profit-making merchant is something vastly different from being just an ordinary storekeeper.

Analysis a Secret of Success

Analyze! This is one of the first words to be learned in the language of efficiency. Always it should be remembered that the prudent man who has an ideal record of costs, and applies his knowledge practically, is the one who out-distances all his competitors in the long run. Also, one needs to remember that 90% of the men in business are getting no profit from their effort—this because they are ignorant of, or unwilling to take the trouble to ascertain, the costs of doing business, and whether a profit on top of costs is being earned. The necessary knowledge is so simply and surely possessible and the trouble so very minor, that one wonders why any dealer should continue ignorant or indifferent, especially when ignorance and indifference are robbing him of due compensation or remuneration for the labor and skill required on his part in the conduct of his business and for the risk involved—the risk of his capital.

COMMERCIAL FAILURES

Taking it all round, 1916 was the best business year the United States ever experienced; yet there were seventeen thousand business failures. Compared with twenty-two thousand the year before, this is encouraging; but practically one out of a hundred of all concerns in business failed, and, year in and year out, through good times and bad times, the proportion of failures never varies very far from one per cent.

In only two hundred and sixteen of the seventeen thousand failures did the liabilities exceed one hundred thousand dollars. Nearly all the failures, in other words, were of small concerns.

Credit men assign many reasons for these failures, such as lack of experience, insufficient capital, injudicious extending of credit, overbuying — which merely means unwise buying—and so on. But we venture to guess that one cause was present in nearly all of them, to wit, poor bookkeeping. They did not keep books so as to know exactly what it cost them to do business and precisely how they stood all the time.

We recommend again to every business concern an accounting system that will show costs accurately —Saturday Evening Post.

HOW TIME INCREASES COST

In an eight-hour day you have only 480 minutes. Thus, whenever you waste five minutes you decrease your value 1 per cent. Your stock falls from par to 99 per cent. If you waste 50 minutes your stock falls to 90, and so on. Few of us ever have a day at par. If you borrow $120,000 at 5 per cent. you are paying 4 cents a minute. If your accountant makes a mistake, and you borrow it a day too soon he causes you a loss of $20. Many a business man has gone down to bankruptcy because he did not realize this ruthless persistence of interest. Interest is like the tortoise in the well-known fable—it is slow, but it never stops to rest.—System.

Automobiles Have Helped Out on Farm

Passenger Cars and Trucks a Factor in Greater Production—Any Tax Which Might Hinder Their Use Should be Discouraged.

IN reviewing conditions existing on Canada's farms to-day and prospects for next year's production, F. M. Chapman, editor "The Farmer's Magazine," says in part: "Farm returns for Canada will be seriously lessened in 1918 unless a concerted effort is made to retain on the farm every experienced farmer that was employed there this year. The conditions in the country are such that production is liable to take a decided slump in the wrong direction if more intelligent sympathy with rural problems is not shown.

"Increased acreage was attained in Ontario last year, but against this increase there has been a late harvest, with little fall plowing done. Traction and mechanical power can help wonderfully, and perhaps the move should be made now to assist in the placing of more power machinery at the disposal of farmers early in the season.

"The way auto trucks and small cars have contributed to saving farm crops this year is a feature of note. By the use of delivery trucks and good roads farmers have sent in thousands of tons of foodstuffs that would have been practically wasted otherwise. Any move to tax or hinder their use or the use of small cars on the farms next year will check production by that amount. Mechanical power, in tractors, big implements, automobiles, auto trucks, gasoline engines and pure seed, are going to be powerful agents in boosting Canadian production next year."

Coming from one who has made a close study of farming conditions, these statements should be investigated before legislation is enacted without due appreciation of the auto's worth.

Many daily papers, in advocating a stiff tax on all automobiles, speak without any knowledge of the subject whatever, having given no thought to the real economy effected by the use of autos—the real saving in man power and horse power.

Our Government seems disposed to investigate matters brought before it now before acting, and there is no doubt that a careful analysis will prove the auto's economic worth to the farming as well as the industrial communities.

WILL RELEASE TIN

Release of a great amount of commandeered tin in New York warehouses was recently promised by the Navy Department on representations of the Department of Commerce that private industries would be handicapped seriously by lack of the metal.

$100 Outlay in Toys Bringing Returns

Start in Toys to Hold Trade for Regular Lines—Toy Department of J. E. Letourneau, Hardware Merchant, Montreal, Making Wonderful Strides—Method of Display—The Children Great Advertisers — Already Planning For 1918.

IT requires more than the average display of regular hardware as made in the hardware store window to attract and hold the interest of small boys and girls. There is one line of goods, however, which lends itself well to attractive arrangement and which promises to draw and hold the interest not only of the wee tots but the older boys and girls, too,—that of toys. Toys are made for them, appeal to their juvenile taste and with their gay blending of colors lend themselves to good display. More and more is the hardware man giving attention to the line, and many have already made a success.

One Hundred Dollar Investment to Start

Away from the center of the city J. A. Letourneau of Montreal conducts a hardware business in a district where boys and girls, big and little, form a large proportion of the population. There are seasons of the year when the hardware lines carried are not in as active demand as at others and this resulted in Mr. Letourneau giving some thought as to how business could be stimulated during the late fall. He decided to add a line of toys for the children and being a new venture it was started in a modest way.

About $100 represented the initial outlay and a selection of staple lines was made comprising toy wagons, rocking horses, drums, dishes, mechanical and other toys of the popular priced varieties. This was in the fall of 1916. The line proved popular from the start and has been greatly increased this year.

How Toys Are Displayed

One thing very necessary in the handling and sale of toys is that of display. The Letourneau store has a frontage of some 40 feet and is about 40 feet in depth. There is a partition in the store and on one side the lines of hardware sold are kept and displayed. But when the late fall comes, unseasonable hardware lines are removed to give space for the display of all children's lines including sleighs, skates, hockey sticks and toboggans and room is made for display tables,—on which are shown the various lines of toys carried. Care is also taken to make an early and complete display of toys in the windows and a representative of HARDWARE AND METAL was impressed with the fine showing as seen in the accompanying photo. This occupies at least two-thirds of the available frontage for window display. Mr. Letourneau states that when school is over in particular a most interested crowd of small and big children numbering from twenty to fifty gathers in front of his store during the balance of the afternoon and even at night.

The Children Great Advertisers

"One of the most direct effects," said Mr. Letourneau, "is the value of the advertising done through the boys and girls who examine these toys and report when they go home. Seeing something they would like, they come in and ask the price and then go home and tell all about it." The displays works splendidly and sales are made in increasing volume. A good assortment of toys is carried including various lines of mechanical toys which sell at prices ranging from $1.50, $2, $3, $5 to $15. These lines have become popular, samples being set up and this plan appeals directly to boys of from 7 and 8 to 15 years.

Handling Toys Keeps Trade Active in Other Lines

One of the direct effects of carrying toys as reported to HARDWARE AND METAL representative by Mr. Letourneau is that of holding the interest and trade of old and new customers for various lines of hardware. As stated at the beginning, this departure has served to hold the trade in active buying mood in what would otherwise be a quiet time and those wanting toys will come here and buy, not requiring to go into town. The line helps to maintain a greater in-

(Continued on page 58.)

It is in front of this interesting display that the children gather, absorbing news of things they want, taking that news with them to those who are possible buyers and in this way advertising the store of J. E. Letourneau of Montreal who now has a regular department devoted to toys and believes in showing them in his store window. About two-thirds of the Letourneau store front is given over to window display and in this instance makes a direct appeal to the children. Getting the children into the habit of looking towards your store for the things they want is building for the future

Saving Billions for Uncle Sam

How Committees of Business Men Have Made Great Savings in the Purchase of War Supplies for the U.S. Government—All Contracts Supervised by Experts.

By a Staff Representative at Washington.

WASHINGTON, D.C.—At the corner of 18th and D Streets is a long, low building, with innumerable wings and a general air of intense activity. At any hour of the day the curb is crowded with motor cars of all descriptions, and there is a constant flood of people pouring in and out the main entrance. It stands on a corner of the extensive park system, behind the White House, and the activity which prevails appears a little strange in this usually quiet corner of the capital city.

This is the headquarters of the Advisory Commission of the Council of National Defence. The building is a temporary one, erected in 50 days (as already told) in order to save on office rent. When the war is over it will be torn down and the park around will regain its wonted air of calm composure. In the meantime this building is about the most interesting corner of Washington. Certainly it houses one of the most extraordinary organizations the continent of America has ever seen.

When you get inside, an elderly gentleman takes your card and courteously turns you over to a messenger. He is affable, efficient and extremely busy, and it is interesting to know that he is a retired wholesaler of comfortable means. He has found a way of "doing his bit," and he works steadily from 9 to 5. At various parts of the building are found barricades with ante-rooms for waiting visitors, and other affable old gentlemen are there to see that you are attended to promptly. They may have been bank presidents in their active business days. They also are doing their bit.

The building is made up of small offices with beaver board partitions, and in each office sits a man hard at work on some phase of national organization. All these men have fitted themselves as units in the organization and are cheerfully accepting the unusual conditions entailed. In their own businesses they sit behind mahogany desks, with batteries of secretaries to protect and assist them, for practically every one is or has been the head of some well known business concern. Some of them are giving their whole time at Washington. Others come down for three or four hours a day. All work without a cent of remuneration, and in order to do this many have given up $50,000 salaries.

There are several thousand connected with the organization altogether and only 80 are paid, practically all of the salaried employees being stenographers and clerks.

The most astonishing feature is the discipline that prevails. Bear in mind that each of these men has been the head of some big concern or other, and possesses the matured judgment necessary to perform executive work. Break in on any one of them, however, with a request for information and he will refer you politely to the head of his committee and the chairman in turn will refer you to Grosvenor Clarkson, the secretary of the Commission. Mr. Clarkson is a young man who typifies accurately the popular conception of the American super-business man. He is quick at decisions, dynamic, has his work at his finger tips, knows everything that is going on. Generally he will tell you what you want to know, for the haze of mystery that most Government officials like to wrap about them has been discarded here. Business men are accustomed to working in the open.

The Germ of the Idea

It is impossible to definitely fix the credit for the formation of this extraordinarily useful body. That the idea originated long before the United States entered the war is certain, however. The Chamber of Commerce of the U. S. A. had long been agitating for this. The Chamber is a national organization made up of Boards of Trade and Chambers of Commerce and trade organizations of all kinds—manufacturers, wholesalers and retailers. Its membership runs close to the half million mark, and it, therefore, represents in a national way, and a very thorough way, the business men of the country. The Chamber of Commerce was early in the field with an agitation for national defence measures and for the co-ordination of Government with business. On April 8, 1916, a questionnaire was sent out to all members on several vital points and very decided verdicts were secured. The vote, by organizations, went 911 to 45 in favor of National Preparedness and 924 to 46 in favor of the formation of an Advisory Commission of business men.

Unquestionably the unanimity with which the business men of the United States demanded national preparedness had much to do with the legislation which shortly afterward came before Congress. In June, 1916, the Army Appropriation Bill contained a provision for the formation of the Council of National Defence, made up of six members of the Wilson Cabinet, and for an Advisory Commission to be made up of seven prominent business men. It was not until early in 1917, however, that the organization was actually completed and the work started. It needed the impetus of American participation to start the wheels to turning.

About one thousand business men in all were brought into service. Committees and sub-committees were appointed, until it was felt that each essential branch of industry had been covered. The work of these committees was, briefly, to organize the industries, to gather complete information, to advise the Government in the matter of war orders, to improve specifications, to assist in releasing men for service.

The Results Achieved

A summary of what the committees actually accomplished is shown elsewhere. This summary is, after all, a colorless statement to cover the tremendous work that was done, the miracles of organization that were consummated. It indicates, however, that the achievements of this voluntary body were considerable.

Perhaps the most tangible result was the economy effected in the purchase of war materials. It has been an accepted principle always and everywhere that any private person or corporation selling anything to a government is entitled to gouge that government unmercifully. The tendency has been aggravated by our system of party government and the accompanying evil of party patronage. Where government orders go to party supporters there is redoubled chance for profiteering. Certainly governments have always had to pay twice over and the people have footed the bills generally without a murmur.

The Advisory Commission decided that the time had come to stop all this. Instead of paying fancy prices for everything, the government was going to insist on rock bottom prices. Profits enhanced by war conditions were going to be squeezed out.

They met one day to get this principle imbedded and to decide on a line of campaign. The Commission is composed as follows: Daniel Willard, transportation and communication (president Baltimore & Ohio Railroad), chairman.

Howard E. Coffin, munitions and manufacturing, including standardization and industrial relations; vice-president Hudson Motor Co.

Julius Rosenwald, supplies (including clothing), etc.; president Sears, Roebuck & Co.

Bernard M. Baruch, raw materials, minerals, and metals; banker.

Dr. Hollis Godfrey, engineering and education; president Drexel Institute.

Samuel Gompers, labor, including conservation of health and welfare of workers; president American Federation of Labor.

Dr. Franklin Martin, medicine and surgery, including general sanitation; secretary General American College of Surgeons, Chicago.

A Precedent Needed

They got around a long table in a small temporary office in Washington

and "Dan" Willard—big, forceful, sparing of words—laid down the principle on which they would need to work.

"A precedent," he said. "That's what we need. If we can get one deal over on the right lines, it will drive the fact home that war orders are to be put on a new basis."

They talked it over carefully. One can imagine them as they sat around the table, "Dan" Willard at the head; "Barney" Baruch, equally massive and affable, but efficient to the last degree; Julius Rosenwald, keen, incisive, with a mind that is razor-sharp; Samuel Gompers, quiet, impressive, almost infallible on matters he understood. These men were engaged on the task of saving billions for Uncle Sam.

The need for a coup was unanimously accepted and the rest looked to "Barney" Baruch, as Chairman of Raw Materials, for the word as to where the effort should be made. He turned it over in his mind carefully.

"Copper," he announced, finally.

So copper was decided upon. The government needed an almost unlimited supply and copper was both scarce and high. It was an ideal place to strike—but a difficult one. However, the big copper men responded to an invitation to meet at Washington and there went into session with the Advisory Commission.

What transpired at that meeting will probably never be known but when the conference broke up the Government had put through a deal for 45,000,000 pounds of copper at less than half the market price. A saving had been made of $10,000,000.

The copper deal had exactly the effect that had been hoped for. The news penetrated business circles like an electric shock. Here was something entirely new—profits being shorn away from war orders, business putting patriotic motives ahead of profits! Men started to think, to revamp their ideas of what constituted patriotic duty. It is safe to say that men engaged in filling war orders have approached the price problem in a different frame of mind ever since that magnificent deal in copper was made. Ship plates selling at $160 a ton have been purchased by the government at $58. That is just one sample of what has occurred. Dozens of others could be quoted.

The Cantonments

The great test of the usefulness of the committees came when the cantonment question arose. Uncle Sam had a million or more troops to go into camp, and the securing of the multiplicity of supplies needed was a gigantic task. Practically every contract for cantonment equipment was let on the advice and recommendation of advisory committees. It would be impossible to compute the time and money saved through the work of the experts who guided the inexperienced hand of the Government in creating the cantonments.

Just for Instance—Take Duck

The point can best be driven home by telling of a single instance. Take duck for tentage.

It was necessary, of course, to have tents for the men, and the matter of duck for tentage was a very important one. What was the dismay of the Government purchasing agents when they found that they could obtain practically no duck at all! In the first place, the manufacturers of the various varieties of duck were literally suffocated with orders and could not see how they could produce another square inch. In the second place, none of the duck being turned out was quite suitable for the Government specifications for tentage. Here was a hot potato for the purchasing agents to handle! They promptly turned it over to the Advisory Commission. It gradually sifted down to a special committee.

The personnel of this committee was a particularly fortunate one. At the head was A. L. Scott, president of Lockwood, Greene Co., who knows just about everything there is to know about cotton. He might almost be termed an architect of the cotton industry. A manufacturer aiming to start a new cotton mill can leave everything connected with the matter in Mr. Scott's hands—selection of site, purchase of plant, installation of same, planning of sales policy, everything in fact connected with that new business, even to the raising of capital. So it follows that Chairman Scott knew considerable about duck.

With him was the retired president of a large cotton mill, who was relied upon for expert information on matters pertaining to waterproofing—an important feature of duck for tentage. There has always been a great deal of mystery about waterproofing. Each manufac-

WHAT THE BUSINESS COMMITTEES ACCOMPLISHED FOR UNCLE SAM.

The very general acceptance by labor and capital of the suggestion of the Council that existing labor standards should not be changed until the need for such action had been determined by the Council, with the steadying influence on industry growing out of such action.

The procurement of raw materials for the use of the military and naval forces of the United States at prices greatly below the current market price, this being made possible by enlisting the patriotic co-operation of industrial leaders.

The completion of the inventory, for military purposes, of American manufacturing plants.

The saving to the Government of millions of dollars by the proper co-ordination of purchases through the agency of the General Munitions Board of the Council of National Defence, this board being later absorbed by the War Industries Board.

The organization of the agricultural newspapers to work in conjunction with the Secretary of Agriculture for greater and more efficient production.

The mobilization of the 262,000 miles of railroads of the country for the Government's defence.

The close-knit organization of the telephone and telegraph companies of America to insure to the Government the most rapid and efficient wire communications.

The creation, under the Medical Section of the Council, of a General Medical Board, consisting of many of the most highly qualified surgeons and physicians of the country.

The selection by the same section of thousands of doctors specifically qualified for membership in the Medical Officers' Reserve Corps, and the standardization, far on its way to completion, of surgical instruments and supplies.

The creation by the Council of the Aircraft Production Board, which developed the Liberty motor, and which, in co-operation with the U.S. Signal Corps, is setting out to establish a great American air service at the earliest possible moment.

The results obtained by the Council's Committee on Coal Production in the procurement and expeditious shipment of coal, both in the civilian and federal interests.

The saving to the Government of millions of dollars through the application by the Committee on Supplies of the Council of the most modern business methods in the purchase of supplies for the War and Navy Departments, largely through the elimination of middlemen.

The work performed by the Council's Committee on Emergency Construction and Contracts in enlisting the best building and architectural experts of the country for the erection of the cantonments for the national army. In this they were greatly assisted by Canadian experience.

The successful initiation of a movement to co-ordinate activities on the part of the states of the Union for the national defence, brought to a clear and workable focus by a conference of states held in Washington, at the call and under the auspices of the Council, which movement has reached a high point of organization under a special section.

The organization of a railroad committee which was sent to Russia.

The enlistment of reserve engineer regiments to aid in rehabilitating the railroads of France.

The creation by the Council of the War Industries Board to assume the duties formerly discharged by the General Munitions Board, and to act in addition as a clearing house for the war industry needs of the Government. Under this board are handled vital war matters having to do with raw materials, finished products, and priority. A commission of this board is authorized to arrange purchases in accordance with general policies formulated and approved. The board recently made the arrangements with the copper and steel producers to fix the price for their commodities, announcement thereof having been made by the President.

The carrying on by the Commercial Economy Board of the Council, with the co-operation of the business press, merchants, manufacturers, and consumers at all points, of successful campaigns for conserving wheat, wool, and other commodities in which there have been shortages and for reducing the amount of labor employed on non-essential services in trade.

The creation by the President, at the request of the Council, of a labor commission to aid in the adjustment of social and labor disturbances throughout the country, particularly in the Western States.

The creation by the Council of a Woman's Committee, which is enlisting the woman power of America for the prosecution of the war.

The pronouncement by the Council through the Secretary of War, its chairman, of a policy to the effect that all effort should be centered to help win the war, this pronouncement having been made in response to queries as to the attitude which should be taken relative to improvements, public and otherwise, involving large construction work.

The creation, in little more than 30 days, through the Automobile Products Section of the Council and the Society of Automotive Engineers, in co-operating with the Quartermaster's Department of the army, of the standardized U.S. heavy-duty war truck.

The mobilization, in short, of the industrial forces of the country for war, the act of Congress creating the Council having made it mandatory upon the latter to bring about "the creation of relations which will render possible in time of need the immediate concentration and utilization of the resources of the nation."

XMAS WINDOWS THAT DRAW TRADE

With the rapid approach of Christmas, plans are being carried into effect to increase the efficiency of the sales program of the retail hardware store. The window display is one of the most important features to be considered and the Christmas window display reproduced above carries a wealth of practical suggestion which can be utilized at this season of the year. The arrangement of the display should be such that "selling force" and "pulling power" predominate. It is to assist the retailer in attaining this desired result that this and other window displays will be shown.

turer has had his own special processes and devices, and he has guarded them with the jealousy of a Midas. Well, this man knew as much about waterproofing as any man in the Union. Then there were several buying experts—men of long experience and tried probity.

So it was a compact and shrewd committee that took up the problem of finding tents for the new army.

The first thing they did was to get complete information as to the number and capacity of the looms in the country. Then they summoned, first, the tire duck manufacturers to Washington to talk the situation over. The tire men, six in number, came down.

"How much can you give us?" asked Scott.

The six in concert voiced the impossibility of doing anything. They were loaded up with orders as it was and the tire people were pressing them hard. Their plants were running at top capacity as it was. However, it developed that the spring—this was in early spring—was the rush season. There was a certain amount of relief toward fall and through the winter.

"Well," said Scott, "we'll let you off with 25 per cent. of your output. We've got to have that. You can make it up by continuing your spring rush right through the year."

"But we can't make the duck according to your specifications," they protested. "You need it in 30¼ in. widths. We can make only 60½ in. and 90¾ in. widths."

"That is our problem," replied the committee. "You give us a quarter of what you make and we'll find ways and means of adapting it."

The tire men promised and departed. Next came the carpet manufacturers, and the committee met them with a stiffer proposition still. Carpets are not so essential in war times as tires, so 40 per cent. of output was demanded. The carpet men finally consented to this. Mind you, the committee was acting without any power of compulsion whatever. They had to do everything by persuasion.

Then they got together and studied the specifications for army tents to see how 60½ and 90¾ duck could be made to fill in where 30¼ was needed. Certain changes in the specifications were finally evolved which made this possible, and to which the War Office consented. When the duck began to arrive from the manufacturers it was thus found possible to make use of it.

And in due course tents were provided for 500,000 soldiers!

What Lack of Co-operation Meant

This incident is typical of the kind of work the committees were doing all

(Continued on page 46.)

EDITORIAL COMMENT

GOVERNMENT USES "HARDWARE AND METAL"

IN the Seventh Annual Report on Wholesale Prices in Canada, a book of 295 pages, just issued by the Department of Labor, HARDWARE AND METAL has again been taken as the authority on prices covering iron and steel products, glass, oils and general lines of hardware. There were 52 groups of prices taken from our market quotations which covered references to 624 individual prices. This more than doubles the references on hardware products made from all other sources, including trade papers, manufacturers or dealers.

Every care is exercised in securing these reports and their accuracy is fully testified to in their continued use by the Dominion Government in preference to all other sources.

Retail merchants have in HARDWARE AND METAL'S market reports the most up-to-date quotations at all times, secured from authoritative sources and revised up to the minute of going to press. With the coming of stock-taking time, the information contained in our Weekly Hardware and Paint Market Reports will further prove its value to the retail hardware man in checking present-day costs against purchases.

OUR PRESENT AND FUTURE DUTY

FINAL reports coming to hand indicate that over $408,000,000 has been subscribed to Canada's Victory Loan. The Dominion has done what was expected of it, and, having assured the twofold success of the Victory Loan, may now turn to other than financial efforts with renewed energy and corresponding but long looked for success.

Much stress is laid by present-day economists on the necessity of being prepared for the era of reconstruction following the war, but these are all based on hypotheses of a more or less personal nature, and influenced entirely by the side of the opposing forces to which the theorist is allied. It is presumed, no doubt rightly, that industrial activity will continue unabated till desolation and destruction are replaced by habitation and production, but,—that which is destroyed in a day cannot always be replaced in a day, and what is more to be considered, as the war with its tremendous expense drags on, is,—the cost of the war will not cease when the last gun is fired.

Great as will be the benefit to our country through the splendid efforts of all in making the loan a success, its effects on our national and individual policies in the future will be still greater, less spectacular, but more lasting, a constant reminder and incentive to each one of us that the best and only the best of what is in us must be given freely to justify the unparalleled safety and immunity in which we go about our business.

Efficiency, that oft-quoted word worn threadbare in its meaning through misuse and overuse, must become the motto of each bondholder. Production, not profits, must know no limits if our nation is to become an Apollo and carry its share of the world's burden in years to come. Credit sufficient to restore civilization to some semblance of its former self must be given and accepted freely by all, and the manner in which labor plays its part during the next decade or two will in large measure determine the rapidity and thoroughness of the world's recovery.

The necessity for proper government control of Victory Loan bonds will therefore be evident, in view of the number and disposition of individual subscribers, and the efforts of unprincipled parties to pull off profits through unscrupulous market manipulation cannot be too strongly condemned, especially in the interests of future loans. The faith of the small investor must remain unshaken always, and if such an undesirable development is permitted to occur, and small investors, who have been argued into buying by the assurance that they can get their money back at any time, find that they have been deceived. it will mean that many new investors will receive such a bad opinion of government bonds that they will not buy again.

The remedy is easy,—a prohibition of the sale of bonds under a certain fixed minimum. This regulation could be enforced as a war measure and it would work no hardship to anyone, except perhaps the unpatriotic few who have declined to buy now in the expectation that they can pick up the issue at bargain levels a little later on.

A WORD FOR CANADA

IT IS rather astonishing how some people delight in decrying the country in which they live. For instance take this little "brief" from the Toronto *Globe*: "The United States is preparing to call out its

second draft, while some Canadians are agitating to prevent Canada calling out her first."

If that were a true statement of facts no one could quarrel with it. The United States may very probably be preparing to call out her second draft, but Canada had sent nearly half a million of men before a draft was dreamed of. The United States has up to the present lost three soldiers in their fighting in France. Before Canada had been in the war as long as the United States her dead were dotting the fields of France in thousands.

No one would depreciate the great things that the United States is doing. But Canada has already done great things, and until the United States has recruited five millions of men and has the better part of them in France there will be no just reason for throwing her activities in the teeth of the Canadian people.

SHIPBUILDING ACTIVITIES INADEQUATE

THE first annual report of the United States Federal Shipping Board indicates that the present powers of the latter are totally inadequate to meet the existing ocean freight service emergency arising from German submarine activity. Additional powers, it is claimed, are necessary, so that control may be had of ocean freight rates, and the regulation and supervision of shipping generally. The Board declares that not the least of the problems confronting it is the threefold one of getting, keeping and training men for their respective tasks and duties.

Vessel tonnage of mammoth quantity is under construction and on order on or near every waterway, lake and ocean coast of the United States and Canada, yet there is little doubt that the work as a whole is not marked by that progress which is so desirable, because so urgent. The frank statement by the Shipping Board of its inability to cope with the situation without extended powers is in no sense a confession of weakness, rather is it a warning, originating from expert conviction to those whom it serves, that measures more drastic be enacted and become operative without delay.

COPPER SITUATION EASIER

THROUGH the activities of the Copper Producer's Association an agreement with the Government has been reached whereby the small users will be able to secure some copper supplies in less than carload lots through the usual channels. Producers will be permitted to sell a limited amount of copper to metal merchants who have been in the habit of supplying that trade for resale, under certain restrictions, in small lots. The War Industries Board has named certain conditions and restrictions upon which copper can be sold to distributors and has also approved such distributors or supply houses who can be relied upon to carry out the agreement.

The *American Metal Market* comments on the present situation as follows:

"The announcement of September 23rd recited an agreement between the Government and the copper producers which contained among other things the condition that the copper producers were to take the 'necessary measures under direction of the War Industries Board for the distribution of copper to prevent it from falling into the hands of the speculators who would increase the price to the public.'

"In fulfillment of that part of the agreement the producers were selling all copper with severe restrictions against re-sale under any terms and conditions whatsoever, and this naturally brought up the problem of the retail distribution of copper in less than carload lots. In order to provide for this retail distribution an exception to the conditions as expressed in the original agreement was authorized, under which copper sold by the producers at 23.50c may be resold by jobbers in less than carload lots at 23.50 plus not over 5% or 24.67½c."

KEEP YOUR WINDOWS PULLING

THE owner of a large chain of stores recently remarked that he would rather have a manager who would keep his windows always pulling trade than one who could make an exceptional effort every once in a while and make a really artistic display. The bigger the store the more the emphasis is laid on the value of window display. It has been proved time and again to be the big selling force of the store. Yet some merchants neglect their windows entirely, or spend only a few moments in filling them full of an uninviting list of goods. No merchant can afford to save time on his windows; to do so is to lose money.

MAKE YOUR WINDOWS SALESMEN

ALREADY we are having indications of the interest that is being taken in the Christmas window displays. We have had a number of requests for numbers in which displays have appeared, an indication that these are going to be used as a basis for other windows. We are also receiving word that many merchants contemplate entering this competition.

Keep this matter at the front of your mind and see what you can do to make the most attractive window that has ever graced your store.

There is more selling punch in a good window display than most merchants realize, there is more than is to be found in almost any agency of the store. More especially is this the case at Christmas time, when people are on the streets looking for things to purchase. To fail to take advantage of this great opportunity is to throw away your best selling appeal. Make your windows salesmen, and having so made them, have them photographed and enter them in our Christmas window contest.

Western Salesmen in Convention

Representatives of Sherwin-Williams Co. Meet in Winnipeg—Western Spirit of Enthusiasm in Evidence—"At Home" Ends Proceedings.

THE western representatives of the Sherwin-Williams Co. of Canada, Ltd., recently held their annual convention at the company's offices in Winnipeg. The convention room was very tastefully decorated, a great many exhibits being arranged around walls.

The meeting was opened on Monday with Mr. Fallis, manager of the western division, taking charge. The figures for the year were gone into very carefully and the reports as read by Mr. Fallis proved very pleasing, and confirmed the good work which everyone connected with the organization felt the western division were doing. Throughout the meetings the western spirit of enthusiasm prevailed.

For the coming year the representatives feel that the new lines which they have to offer, backed by the advertising campaign outlined for the entire range of their products, should assist them in carrying the western business through in a flourishing condition.

The convention lasted until Thursday evening when it was brought to a close by an At-Home, held in the offices and plant of the company. The At-Home took the form of a concert with a special orchestra; following the concert an impromptu dance was run. The employees and a number of guests who were invited, totalling in all about two hundred and fifty, spent a very enjoyable evening.

The optimism and enthusiasm shown by the representatives made one feel that there should be a banner year during the coming season for the Sherwin-Williams Co., western division.

P. D. McCALLUM

One of the representatives of the Sherwin-Williams Co. in Western Canada. Mr. McCallum earned first place among the salesmen in Western Canada, having the largest number of sales and increases over the previous year. His sales of barn paint eclipsed those of the salesmen in any part of the Dominion.

Retail Hardware Expenses

THE question of what constitutes expense and what this percentage should be on sales is a question which is ever before the retail merchant and never fails to bring out some interesting development. It usually comes in for consideration at all gatherings of hardwaremen, whether in conventions or just in the casual discussion of business when three or half a dozen merchants get together.

F. L. Macomber, vice-president of Hibbard, Spencer, Bartlett & Co., wholesale hardware, Chicago, has sent in an expense leaflet which is distributed to any of their customers desiring enlightenment on this subject and in commenting on same says in part:

"The retail hardware merchants do not follow any standard plan of bookkeeping. Many of them keep no books. There is no systematic method of collecting data from those who do. Therefore, it cannot be claimed these figures are anything more than a careful estimate. It is our judgment they are not far out of line with the actual average experience of hardware retailers.

"Many thousands of these leaflets have been mailed to our customers. Upon learning a customer's expenses are excessive, it is our usual practice to call his attention to this leaflet. Large numbers of the leaflets have been supplied to merchants newly embarked in business.

"If a merchant is extravagant in his expenditures, this table serves to warn him of the fact and we do not think there can be any doubt that its wide circulation will help to bring about better business methods."

The leaflet itself which carries the heading "Retail Hardware Expenses" is reproduced herewith and should form a basis on which hardwaremen in computing their year's figures, as they will soon be doing, can see in what respect, if any, their figures are high or low.

Retail Hardware Expenses

In a prosperous retail hardware store, what expense disbursements are permissible?

The question has so often been asked of us, we believe our customers will be interested in the following table recently compiled from the experiences of a large number of merchants by "System," a well known business magazine.

The percentages are based on sale prices, not on the cost of the goods. They do not include freight and cartage, interest on investment, losses from declines in prices or gains made through cash discounts. "Salaries" includes the salary of the proprietor as well as the employees.

The figures in the second column represent the expenses, at these ratios, on an annual business of $20,000.

	%	
Rent	3.41	$ 682.00
Salaries	10.11	2,022.00
Advertising	1.12	224.00
Heat and light	.43	86.00
Delivery	.91	182.00
Supplies	.60	120.00
Insurance and taxes	.99	198.00
General expenses	1.01	202.00
Depreciation and shrinkage	.52	104.00
Bad debts	.31	62.00
	19.41	$3,882.00

A reasonable selling price, of course, makes proper allowance for the cost of goods, freight, cartage, all of the expenses above enumerated, suitable interest on the capital investment, interest on borrowed money and losses (if any) through declines in prices.

"THE LAST MAN TAKES THE CLOCK"

About thirty-two years ago fifteen employees of The Stanley Works chipped in and bought a clock for old Dept. 3. Up to a few days ago this clock was being used in Dept. 30. Then, as even the best of clocks will do, it stopped. When it was taken down to be repaired the following was found written in lead pencil on the back:

"February 1st, 1886—The last man that goes takes the clock."

Below the inscription was a list of the men who had clubbed together to buy the clock almost a third of a century ago:

Many of these men are now dead. Only two are still with the Company: J. Meehan, who is now foreman of Dept. 42, and J. Dunlay, who is now foreman of Dept. 3. The ownership of the old clock, after thirty-two years, has narrowed down to them.—From "The Stanley Workers."

George Butler & Co., Ltd., of Trinity Works, Sheffield, and 62 Holborn Viaduct, London, cutlers, state that they cancelled their Canadian agency on the 30th November and until further notice will have no representative in Canada; but have stated that they are keenly interested in the Canadian market and will give to Canadian enquiries addressed to them at Sheffield every possible attention.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

DAD'S ELECTRIC LANTERN

Dad's Electric Lantern, made in fifteen different styles, is being introduced to this market by Canada Dry Cells, Limited, Winnipeg, the makers of North Star Cells. The fifteen different styles are made for various purposes, No. 1, 2 and 3 being for hunting, camping, fishing, canoeing, frog-shining, photography, and all general utility hand lantern uses. Styles 10, 11, 12, 13, 14, 15, 16, 17, 30, 31, 32 and 33 are for bicycles, buggies, motorcycles, wagons, automobiles and other land conveyances, boats, water craft or vehicles.

The following facts concerning Dad's Electric Lantern have been enumerated by the manufacturers as making a special appeal to farmers: no chimneys to clean, no dangerous matches, no explosive gasoline, no greasy kerosene, no ill smelling carbide, no disagreeable odors, no dirty black wicks, no heat and smoke, no trouble and attention, no soot, grease,

Dad's Electric Lantern.

grime, no globes that break, no empty oil lanterns. It is claimed by the manufacturers that when used in the ways and purposes that the average lantern is intended, Dad's Electric Lantern will give light for weeks on one set of fresh high grade dry cells. These lanterns are equipped with adjustable reflectors and bulbs which, it is stated, allow the user to focus light any way to suit.

RADIATOR AND ENGINE ROBES

The "Jack Frost" Robe made by the J. P. Gordon Co., Columbus, Ohio, is a practical item of equipment for winter driving. It is stated that it is so made that the curtain over the front of the radiator may be adjusted to any weather condition and closed entirely when the engine is not running and when closed it will keep the engine and the water warm for several hours.

The Gordon "Jack Frost" Robe is made in two parts, a jacket with curtain that completely covers the radiator and a robe to cover the hood. It is claimed it is just as easy to raise the hood with the robe on as without it. Secure and convenient fastenings hold both parts in position so they cannot be blown off or worked loose by vibration.

Radiator and Engine Robe.

The materials used for better grade is artificial leather and for the cheaper one a special enamelled cloth. Both are lined with heavy heat retaining material.

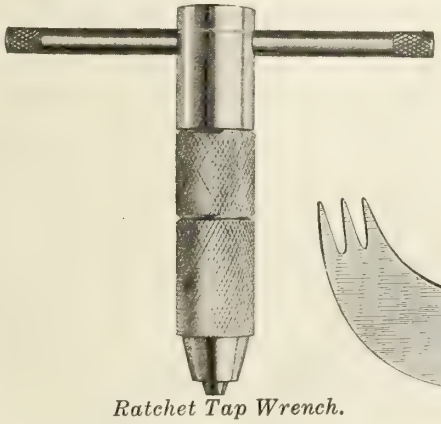
The Gordon Co. manufacture "Jack Frost" Robes in the divided curtain style for every American made car and also a special one piece curtain for Ford cars which rolls from the bottom up and thus in no way interferes with cranking the engine.

RATCHET TAP WRENCH

The Moss-Ochs Company of Cleveland, Ohio, has recently placed on the market a new ratchet tap wrench, in two sizes: No. 1 holds taps from 0 to ¼ in. and No. 2, ¼ to ½ in.

It is made with a sliding T-handle, which, it is stated permits its use in the most difficult corners.

The handle may be held centre by



Ratchet Tap Wrench.

means of a dog which automatically fits in a milled flat surface of the handle. It is claimed that adjustment can be made immediately to either right or left ratchet or rigid by turning a knurled sleeve.

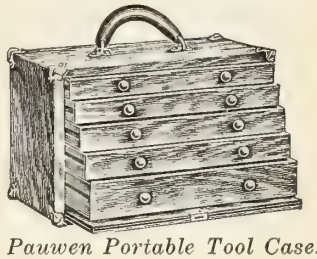
The chuck and ratchet are said to be carefully hardened and all other parts substantially made, insuring unusual durability.

PORTABLE TOOL CASES

Solid quartered oak and imitation black seal grain leather are the two finishes used for each style of the Pauwen portable mechanic's tool cases now being marketed by Bernard Pauwen & Co., 56 E. Randolph St., Chicago. It is stated that the covered cases are made of thoroughly seasoned lumber, fronts of drawers and inside of cover being made of solid quartered oak.

Oak cases are made with solid quartered oak frame, fronts of drawers and cover of same material.

All cases have solid brass corners, solid brass lock, heavy leather handle,



Pauwen Portable Tool Case.

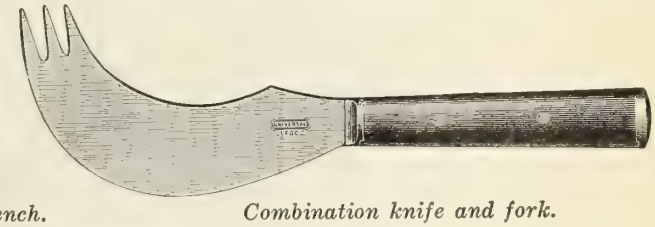
and bottoms of drawers are lined with heavy felt.

Cover of case fits in groove, and slides under bottom drawer when case is in use.

It is claimed the use of these cases will prevent damage to tools and their convenience for tool makers and mechanics is very marked.

COMBINATION KNIFE AND FORK

Landers, Frary & Clarke, Ltd., of New Britain, Conn., through their Canadian agency, A. MacFarlane & Co., Montreal, are placing on the Canadian market a new line in the shape of a knife and fork in one piece for a one-handed man. The



Combination knife and fork.

blade is heavy and the cutting is done by bearing down on it with a rocking motion. This combination knife and fork is being used quite extensively by the soldiers who have returned from the front with only one arm.

EVENTS IN THE TRADE

BUSINESS CHANGES

Toronto, Ont.—J. O. Smith & Son have dissolved, Wm. R. Smith retiring.

Rocanville, Sask.—H. W. Webb, hardware, has sold to W. A. Gabb.

Estevan, Sask.—P. C. Duncan & Co. have sold out to W. R. Whitby.

FIRE LOSS

Brantford, Ont.—Chas. Lake, brass foundry, suffered fire loss.

TRADE NOTES

Ottawa, Ont.—McDougal's Ltd., hardware, is undergoing extensive alterations and additions.

ADDITION TO PLANT

The McFarlane Mfg. Co., Toronto, formerly McFarlane Ladder Works, have just completed the new wing to their plant, which give them an addition of about thirty-five per cent. more floor space. They anticipate extending their line in the near future.

PERSONAL

A. A. Bolen, general merchant, of Corbetton, Ont., visited Toronto during the week.

J. Umphrey, of Udora, general merchant, made a business trip to Toronto during the week.

William Suggett, general merchant, of Valentia, Ont., spent a day in Toronto during the week.

James Dandie, hardwareman, of Streetsville, Ont., spent Tuesday of this week in Toronto on business.

A. B. Danube, of Font Hill, hardware dealer, was in Toronto on Tuesday of this week on a business trip.

B. J. Lanigan, secretary-treasurer of the Calgary Iron Works, was married recently to Miss Winnifred Colgan.

F. C. Carman, of Canada Dry Cells, Ltd., Winnipeg, has returned to headquarters from a trip to the Coast.

J. Robinson, general merchant, of Cookstown, Ont., spent a day in Toronto on business during the past week.

W. Al. Treat, representing the Chicago Spring Butt Company, was in Toronto calling on the trade on Thursday of last week.

Maurice B. Shyne, sales manager, Peterboro Lock Manufacturing Company, has returned from an extended business trip through Western Canada, taking in the cities of Vancouver and Victoria. Mr. Shyne reports business conditions good in British Columbia and the outlook promising.

David Brewer, representing the Landers, Frary & Clark Company of New Britain, Conn., made his rounds of the wholesale hardware trade in Toronto during the week.

W. N. McNeil, of Chicago, representing William Vogel & Bros., of Brooklyn and Chicago, manufacturers of oilers, visited Toronto on Tuesday of this week.

Charles Fairbairn, general merchant, of Brown Hill, Ont., visited Toronto during the week.

ST. JOHN, N.B. NEWS

John W. Gill, formerly employed with W. H. Thorne & Co., is reported from France suffering from shell shock.

Gunner John Henry Lawson, formerly of the office staff of T. McAvity & Sons, has been reported killed in action on November 6.

Leon Chester Vincent who has died of wounds in a London hospital was employed with T. McAvity & Sons before enlisting.

Ira Cornwall White, of the staff of Emerson & Fisher, was united in marriage to Miss Hazel Frances Bezanson in Trinity Church this week.

All the leading hardware stores in St. John signed the agreement to invest the entire proceeds of their cash sales on Friday, Nov. 30, in Victory Bonds, in addition to their previous subscriptions.

Adjustment of the loss incurred when the premises of Foster, Robertson & Smith's hardware establishment, Dock Street, was visited by fire last week showed damage much less complete than had been anticipated. The award agreed upon was approximately $35,000.

John Keeffe, St. John manager for the James Robertson Co., Ltd., has been forced to resign from the exemption tribunal on which he was serving, owing to the pressure of business. In accepting the resignation, Judge Armstrong paid a high tribute to the way in which he had carried on the work.

NEW CORPORATION FORMED

The Silvex Company Reorganized and Reincorporated. $2,000,000 Corporation Formed.

The Silvex Company of Bethlehem, Pennsylvania, manufacturers of Bethlehem Spark Plugs and other automobile accessories have announced the formation of a new corporation under the laws of the State of Delaware, capitalized at $2,000,000 which will be divided equally in an issuance of $1,000,000 common and $1,000,000 preferred stock. The new board of directors includes:

E. H. Schwab, president; J. H. Ward, E. B. Turn, W. M. Davidson, and W. H. Lumpkin, all of Bethlehem.

This company will shortly move into its new quarters—a modern concrete and steel factory that has been outfitted throughout with new machinery, deliveries for which were contracted for a year back.

It is reported that the increase in capital and facilities has been necessitated by demand for this company's products—particularly spark plugs for use in the various types of aviation motors now being developed.

CREATES EXECUTIVE POSITION

To take care of its increasing jobbing business, the McGraw Tire & Rubber Co. has appointed R. G. Nelson, superintendent of districts. In this capacity Mr. Nelson will have general supervision of all district offices, and will spend most of his time in sales promotion work. C. E. Humphrey, former St. Louis district manager assumes duties of assistant sales manager with headquarters at East Palestine. R. J. Delavan, who has been serving the company as special representative becomes St. Louis district manager.

VETERAN TRAVELLER INJURED

Wm. Jeffrey, one of the veterans of the McClary Mfg. Co.'s travelling staff, is confined to his home, 141 Douglas St., Stratford, Ont., as a result of a mishap at Orillia. Mr. Jeffrey was leaving the bus early Friday morning when his heel caught in the support of the bus step with the result that his ankle was badly sprained. This will necessitate Mr. Jeffrey giving up his duties for a few weeks.

INDUSTRIAL NOTES

Toronto, Ont.—Canada Metal Company is erecting an iron and steel warehouse at its plant on Fraser Ave.

Copper Cliff, Ont.—The Canadian Copper Co. are having plans prepared for $10,000 one-storey brick machine shop.

Toronto, Ont.—The Dunlop Tire and Rubber Co. have been granted a permit to build an addition to the power house on Booth Ave., to cost $5,500.

Niagara Falls, Ont.—The building at Niagara Falls, jointly occupied by the Davis-Bournonville Co. and the Davis Acetylene Co., has been taken over by the former company and will be operated exclusively for the manufacture of oxy-acetylene apparatus for the Canadian trade.

Reorganization of Hamilton Company

Dowswell, Lees & Co., Ltd., Succeed Cummer-Dowswell, Ltd., at Hamilton—Addition to Plant Completed.

DOWSWELL, LEES & CO., LTD., have succeeded Cummer-Dowswell, Ltd., in the manufacture of washing machines and clothes wringers at Hamilton, Canada. The new organization will have at its head Geo. B. Dowswell as president, an office he has held with the former company for over twenty years.

The directors of the new company will be Geo. B. Dowswell, president; Fred Dowswell and Herbert S. Lees, vice-presidents; Geo. H. Lees; and F. T. Bain, secretary.

It is intimated that new aims and new objectives have been incorporated in the policies governing the future of the organization which will do much towards increasing the efficiency of the service rendered.

It is almost forty years, to be exact 1878, since the first Dowswell washing machine was manufactured and at that time the plant was very small in comparison with the present quarters. The original plant was about 30 x 100 feet, but with the continued growth of the business, it has been found necessary to extend the manufacturing facilities until with this year's additions there is a total floor space of about 100,000 square feet.

The first line of washing machines manufactured was the rocker type, and even to-day there is a sale for this line. The wide range of types now being manufactured covers hand and power machines, the power ones being operated by a gasoline engine or electricity. A big line of clothes wringers is also manufactured by the company.

THREE FIRMS AMALGAMATED

International Business Machines Co. Launched To Take Over Two Toronto and one Montreal Firm

As result of an important industrial amalgamation recently effected, the International Business Machines Company, Ltd., has been launched with a capital of $2,000,000. The new concern will take over the plants and stocks of the International Time Recording Co. and the Computing Scale Company of Toronto, and the Canadian Tabulating Machine Co. of Montreal. The operations of this latter concern will be transferred to Toronto. A great saving in the cost of management and operation is aimed at by the bringing together of these three companies. Thomas J. Watson will be the president of the new combination and F. E. Mutton the vice-president and general manager. J. S. Ogsbury is the secretary. L. A. Davidson has been appointed sales manager for the scales division and S. G. Bond of Montreal will have charge of the tabulating section. The company has $100,000 available for immediate expansion and will employ 500 men at the outset.

CATALOGUES and BOOKLETS

NEW FOLDER ISSUED

"The Selection and Care of a Grindstone" is the title of a new folder just issued by the Cleveland Stone Co. of Cleveland, O. Points in connection with the selection, care and use of grindstones are outlined under the following headings: "Something About Caring for Grindstones," "Grindstone Selection and Service," "It's in the Grit," "Efficient Grinding," "Water—Plain Water," and "Grindstone Grit and Speed." Copies will be mailed on request.

THE STANLEY WORKERS

The Stanley Workers is the title of a semi-monthly bulletin issued by the Stanley Works, New Britain, Conn., and being sent to the members of their staff who have left their employ to fight for Uncle Sam. News of the doings of the staff at home and extracts from letters of the boys in training are reproduced.

"STONE WHITE" REFRIGERATOR BOOKLET

A neat white booklet on "Stone White" refrigerators has just been issued, which gives information about the "Chest with the Chill in it" made by the Maine Manufacturing Company, Nashua, N.H. This booklet draws attention to the fact that the stone lining of the "Stone White" is genuine stone from the quarry with a snow-white, glass smooth surface. It is stated that this stone is the greatest cold-retainer known.

The new booklet is interesting, and will be mailed to the trade upon receipt of application.

New Name for Hamilton Wholesalers

Wood, Alexander & James Succeed Wood, Vallance & Co.—The Outcome of Business Founded by A. T. Woods in 1849 at Hamilton, Can.—A review of the Changes Wrought by the Passage of Time.

The partnership which has been carried on under the name of Wood, Vallance & Co. of Hamilton, Ont., has been dissolved by the effluxion of time. The partnership assets have been acquired by Wm. A. Wood, S. H. Alexander and G. F. James, who will continue the business under the name of Wood, Alexander & James.

The business was established in 1849 by A. T. Wood and since then has undergone a few changes undertaken primarily to assist in the expansion of the firm which was noticeable from its inauguration.

Ten years after the business had been established, that is in 1859, Matthew Leggat was taken in as a partner, the firm name as a result being made Wood & Leggat.

Under this arrangement the firm continued in active operation until 1884 when further additions were made, Wm. A. Wood and Wm. Vallance being admitted as partners. The business was carried on under the name of Wood & Leggat until 1889 when partnership was dissolved, Mr. Leggat retiring. Geo. Vallance was then admitted and the new firm name adopted was Wood, Vallance & Co.

During the years that have followed, time has left its mark and it is the combination of the following circumstances which has led to the present change. In 1901 Geo. D. Wood, who had managed the Winnipeg branch of the firm for some years, was admitted as a partner. In 1903, A. T. Wood, who founded the business, died. In 1907 Geo. D. Wood died. The business was continued by the other members of the firm until 1909 when the death of Geo. Vallance occurred. It was then considered necessary to form a new partnership and this was consummated between Wm. A. Wood and Wm. Vallance. Under these conditions the business was continued until 1913 when Mr. Vallance died.

The partnership now completed includes Wm. A. Wood who has been with the firm since 1872, S. H. Alexander whose association dates back to 1884 and G. F. James whose activities started in 1887. The policies of the old firm which have been so successful in extending and holding business will be continued by the new firm of Wood, Alexander & James.

REPRESENTATIVES APPOINTED

J. E. Beauchamp & Co., manufacturers, importers and agents, of Montreal have appointed Lynch and Manley of Toronto as their agents in Western Ontario, and now have the following list of representatives in Canada:

P. A. C. McIntyre & Co., Scott Bldg., Winnipeg, for Manitoba, Saskatchewan, Alberta and British Columbia.

Lynch & Manley, Toronto, for Western Ontario.

H. C. Brennan, Booth Bldg., Ottawa, for Eastern Ontario.

J. M. Paquin, 80 St. Joseph Blv'd., Montreal for Montreal City.

Landry and Simard, 62 St. Joseph St., Quebec, for province of Quebec.

War's Check to Stainless Steel

Prohibition of British Export of Stainless Steel Extends Invitation to Foreign Producers—Sheffield Cutlery Trade Restricted by Need of New Steel For War Purposes.

CERTAIN English cutlery manufacturers are seeking to enshroud the recently promulgated order of the Ministry of Munitions regarding the use of chromium as an alloy of steel, except for war requirements, in an atmosphere of mystery. Chromium is the essential of stainless steel, just as tungsten had always been considered the essential of high-speed steel, but the stainless quality is dependent upon a particular treatment of chrome steel. Its discovery, about a year before the war commenced, arose out of experiments then being made in the introduction of high-tensile alloy steels, it being noticed that test pieces cut from the steel resisted atmospheric attacks in the laboratory and proved extraordinarily impervious to all corrosive influences.

Within 12 months, there being no patent rights protecting it, the steel was made by several firms, and manufactured in the form of table cutlery. Several cutlery concerns turned their serious attention to the new product and did well, but others permitted a traditional conservative spirit to blind them to the possibilities of stainless steel, and in the development of this class of tableware that has since occurred they have been rather badly "left." The suggestion now is, apparently, that the new order has been, in some unexplained manner, influenced by the latter people.

Chrome Steel for War Purposes

For very many years chrome steel has been made in considerable quantities in connection with naval and general ordnance work. It has the quality of being rustless. For three years the Government caused no interruption of the production of the new rustless and stainless steel and placed no restriction upon its use in cutlery manufacture, except that latterly the quantity required for war purposes increased almost weekly. From the very commencement it was requisitioned in the manufacture of certain parts of aeroplanes, being of great strength, and now the Government's requirements are so heavy that, except under permits which are well-nigh unobtainable, chrome may not be used in the making of any steel save that intended for war purposes.

The order, of course, has created a trade contretemps. An enormous demand prevails for stainless cutlery, though it comes chiefly from overseas, people in England being curiously slow in recognizing the merits of the new steel. Where it has been tried there is no turning back to the old style of cutlery, which requires laborious cleaning on an emery board or has its life shortened in machines.

Crucible and Shell Discard Steel Only Available

Many makers were induced to produce the new cutlery for the simple reason that a year ago the Ministry of Munitions found it necessary to forbid the use of open-hearth steel for cutlery making unless in execution of Government contracts. That order restricted makers to the use of three kinds of steel—crucible, stainless, and shell discard. The first mentioned has always been used for the very best class of table cutlery (shear steel); the second already has been explained; and the third, really a scrap steel from munition works, is of such irregular quality that only the commoner kinds of knives could safely be made from it. Now the only steels available are the first and last mentioned.

May Lessen Restrictions on Export Trade

What is being attempted now is a kind of wild agitation in the hope of inducing the ministry to make some concession by lessening the restrictions so far as the export trade is concerned, many of the orders in hand being from places in South America. Those who are concerned in this agitation point to the fact of the official exhibition at Westminster of labor-saving devices and inventions, and ask why, seeing that "stainless" is labor-saving, its manufacture should be prohibited. Some urge that 100 tons of ferrochrome per annum would keep the trade together.

There are those who see in this prohition an invitation to the United States, which so far has no such restriction, to come into the British market with "stainless" and, adds one manufacturer: "If America gets hold of it, Sheffield's trade in it is doomed." Indeed, samples of American "stainless" are said to be already in Sheffield.

It is a contretemps, but no mystery. What the cutlery trade is "up against" is the consequence of prolonged warfare. Every ounce of chrome is now needed for munitions of one kind or another, and into munitions it will go. How the Sheffield interests that registered a patent for "stainless" in the United States and other countries will fare is not known, but it is certain that every cutlery manufacturer here is now face to face with the plain fact that trade interests, however vital they may seem to the members of an industry, must be sacrificed to the needs of the war. It is a part—a small part—of the price.

WONDERFUL NIGHT PHOTOGRAPHS

The action of provincial governments in enacting laws against the glare headlight has resulted in many improvements being made and it will not be long before the highways and byways will be entirely free from the blinding lights which have made the farmer drive into the ditches and which also have been a source of constant eye and nerve strain on the motorist. Enjoyment of an evening's drive will be soon possible to all.

Two distinct types are shown above, the one which throws the light forward on the road and the other which distributes the light to the side of the road as well as lighting the roadway ahead. These are night pictures which illustrate some of the improvements made in auto lenses.

Need for Active Shipbuilding Program

Figures of Results of U-boat Warfare Reviewed—U.S. Program an Extensive One—Navy Department Disclosures.

THE fact that the Germans destroyed more British ships in the first ten months of unrestricted U-boat warfare than Great Britain or any other nation has ever built in a full year has just been made known. The revelation was made when Chairman Edward N. Hurley, of the United States Shipping Board, made public a letter he had written to Senator Gilbert M. Hitchcock, of Nebraska, on the subject. The Germans have sunk in ten months something over 900 British vessels of more than 3,000,000 tons dead-weight.

Chairman Hurley said the greatest shipbuilding feat ever accomplished was that of England in 1913, when 688 vessels of 2,898,229 tons were completed. Japan in 1916, Mr. Hurley said, built forty-three ships of 192,993 tons. This was the biggest tonnage finished by any nation except Great Britain. The American programme, unless held up, will produce 6,000,000 tons by the end of 1918. About 5,000,000 tons will be completed in 1918, thus surpassing Great Britain's best effort by about a million tons.

The United States now has available for trans-Atlantic service 582 ships of a total of 3,721,806 tons, including oil-tankers and former German and Austrian vessels. German and Austrian ships operated by the Shipping Board number 105, of 688,960 tons. American citizens hold eleven more of these ships, totalling 63,915 tons, making the aggregate American holding of enemy vessels 752,875 tons.

New Yard Activities

In reply to questions regarding the activities of new shipyards, Mr. Hurley said all of them that have contracts now have the ground cleared and will have their buildings and ways completed early in 1918. The new yard at Hog Island, Pa., must deliver fifty ships before November 1, 1918, he said, and the Port Newark yard must finish seven in June. The new Bristol Point plant must have four ships ready for service in May.

"Have any British, French, Norwegian, Italian or Dutch authorities yet asserted that they are now building new ships as fast as the submarines are destroying them?" Chairman Hurley was asked. The reply was an emphatic "No." It will be up to the United States, he indicated, to produce new ships faster than the Germans sink them, providing losses are not pulled down by the Allied navies.

A table has been compiled by the Emergency Fleet Corporation showing the vessels under contract and pending contract, and vessels which have been requisitioned by the Fleet Corporation. The figures are: Wood vessels, 375; total deadweight capacity, 1,330,900 tons; composite 50 vessels, 207,000 tons; steel, 451 vessels: 3,186,400 tons; total contracted for, 884 vessels; total deadweight capacity, 4,724,300 tons; contracts pending, 99; tonnage, 610,000; total requisitioned (all types), 426; tonnage, 3,029,508 tons. Grand total, 1,409 vessels; total deadweight capacity, 8,363,808 tons. This total includes requisitioned vessels completed and released—33 vessels; 257,575 tons.

Navy Dept. Disclosures

The Bureau of Supplies and Accounts, the Navy's purchasing organization, has evidence that at least one commodity has been deliberately held for abnormally high prices. In the case of tin, the navy has commandeered 1,000 tons stowed in New York warehouse, but has turned over to the American Steel and Iron Institute the question of further adjustment of prices and supply. The navy had sufficient tin, through foresighted purchases last spring, to supply its own needs, but there was a prospect that if more tin were not given contractors, the navy destroyer program would actually be halted for want of machinery in which tin was used directly or as an alloy. One New York concern—a Dutch house—had a big supply of tin, from which the navy drew 800 tons. The manager, manifestly, was holding for high prices, for he did not even know what to charge when asked for a quotation. He informed the department he would have to consult his home office. This waiting on high prices was undertaken in the face of the fact that Holland would have no market here if the British had not permitted her to ship the goods in. Tools intended for South America have been seized because of the pressing need for them here.

The United States Tariff Commission anounce that it will hold hearings in the near future for the purpose of receiving information and suggestions from representatives of industry and commerce and labor and foreign trade on war disturbances and the plans for readjustment to peace times, which are being considered.

ADDITIONAL BRITISH IMPORT PROHIBITIONS

The importation of the following goods into Great Britain is prohibited: Abrasive wheels; binder and reaper twine; brass rod and brass wire; cycles other than motor cycles; electric meters; electric motors over one-half horsepower; electric hand lamps and torches; magnetos; measuring tapes and rules of all descriptions, including Vernier's micrometers; pens, penholders, pencils, and all other stationery of which the importation is not already prohibited; vegetables in brine.

IT IS NOT TOO EARLY

To plan your entry for HARDWARE AND METAL'S *Window Dressing Contest. There is a prize-winning window shown on another page from which suggestions may be secured. Take time to plan your window carefully. There will be real dollars and cents returns for you in a business sense and you stand a chance of securing a real money prize by sending in a picture of your window to* HARDWARE AND METAL. *Read details of* HARDWARE AND METAL'S *Window Dressing Contest below.*

HARDWARE AND METAL'S annual Christmas window display contest will be conducted as usual this year. The growing interest evinced by Canadian retail hardwaremen in this contest is evidenced in a wider and more representative response each year.

Two contests will be conducted in accordance with past custom—one for stores in places under 5,000 population; the other for places of 5,000 and over. No restrictions are set on the style of display or the goods used in the arrangement, except that each window must be arranged with goods for the Christmas trade.

ARE YOU GOING TO ENTER?

EIGHT PRIZES WILL BE OFFERED AS FOLLOWS:

Places under 5,000.		Places of 5,000 and Over.	
First Prize	$10 00	First Prize	$10.00
Second Prize	5.00	Second Prize	5.00
Third Prize	3 00	Third Prize	3.00
Fourth Prize	2.00	Fourth Prize	2.00

Contestants will note that an equal number of prizes are offered to the small town trimmer as to those in the larger towns and cities.

The contest closes Tuesday, January 1. No photos received after that date will be entered unless there is proof that they have been delayed in transit.

All matter should be addressed to "The Editor, HARDWARE AND METAL, 143-153 University Avenue, Toronto," and marked "For Christmas Window Contest."

Blasting Powder Declines; Safety Fuses Up

Stumping Powder in Good Demand, with Prices Holding Steady—Manufacturers Will Not Book Orders for Future at Present Prices.

A SLIGHT move in the downward direction was recorded in the price of blasting powder during week, selling price to retail trade being now $3.50 per keg of 25 pounds f.o.b. Toronto. One closely in touch with the situation assigns the reason for the decline in blasting powder to a more plentiful supply of nitrate of soda. This commodity is not used in the manufacture of munitions and hence has not been in such great demand as saltpetre, which is one of the principal ingredients in high explosives. Blasting powder is not classed as a high explosive. Its business is to lift rather than to shatter.

Safety fuse has made an advance of approximately 18 per cent., the new price being 95c per 100 feet as compared with the former price of 80c per 100 feet. This fuse is brought in from Great Britain and scarcity of supply and difficulty in transportation has worked out toward higher prices. Blasting caps, however, have held steady in price since the advance about six months ago. These latter are quoted at $20.25 per thousand.

Stumping Powder in Good Demand

Owing to the stimulus given to production during the past year there has been much new land put under cultivation in Ontario. This has resulted in a very good demand for stumping powder. Manufacturers are looking forward to a continuation of these conditions during the coming year. The last advance to be recorded in stumping powder was in the month of September and prices have held steady since that time at $29.80 per hundredweight for the strongest grade and $24.80 per hundred for weaker grade. Stumping powder is classed as a high explosive, being one of the ammonia series of explosives. There is an embargo on all high explosive materials coming out of Great Britain and manufacturers have to depend upon this continent for their source of supply.

Less Blasting Powder Used

Owing to industrial conditions there has been less blasting powder used during the past year than in previous years and there is every prospect that its use will be further curtailed during the coming year. It has been the practice of most of the brickyards to continue operation throughout the winter months and in order to get their clay out they used the blasting powder to tumble the banks over. This year, however, quite a considerable number intend to close their brickyards down during the winter months. When the spring months come they expect the frost will have loosened the clay banks sufficient to give them easy access to the clay without the necessity for blasting. Difficulty in getting cars has operated to cause a number of stone quarries to cease operations. This has further decreased the amount of blasting powder required.

Uncertain Conditions Prevail

The manufacturers assert there is such an uncertain condition in the market for high explosives and other materials of this nature that they will not book orders ahead for any distance into the future. They will accept orders on the basis of present prices only for immediate shipment.

SHAUGHNESSY'S SAVINGS

Lord Shaughnessy told the following story of how he saved his first hundred dollars at a meeting at the Windsor Hotel, Montreal, in connection with the war loan:—

In the early days nearly fifty years ago, when my salary was a modest one, but in excess of that received by most of the young fellows with whom I associated, the portion of the monthly pay which I felt justified in appropriating to my own use disappeared regularly and rapidly with nothing to show for it. I conceived the idea of calling on an acquaintance, the cashier of a private bank, to ask if he would loan me $100 at the current rate of interest against my notes in monthly amounts covering a period of six or eight months. In those early days, bank cashiers and managers were more considerate and confiding than they are in these times and he agreed. The notes were made and turned in, and $100 in currency was handed to me, which I immediately placed to my credit in the Savings Department. The cashier did not understand the novel transaction, and asked the purpose. I told him that these notes would be personal obligations that I would meet each month as they became due, and that at the end of the period I would have a bank account of $100 and so it worked out. The notes were met without causing any special inconvenience, and during the few following years of varying fourtune, that amount of $100 never grew less. Indeed, if there be anyone present to whom I owe money, he may be gratified to know that I still have it.

The Marine Construction Co. Ltd., with capital stock of $300,000, and head office at St. John, has been incorporated. The directors are D. H. Saker, J. N. Densmore, and V. T. Pederson, all of St. John. The company already has engaged in building commercial vessels.

SAVING BILLIONS FOR UNCLE SAM

(Continued from page 37.)

along the line. As a further evidence of their usefulness cases might be quoted where the Government proceeded without consulting the committees. Trouble of a serious kind often ensued.

Take the case of steel distribution. Steel is the great bone of contention between Government and Business to-day. There is isn't nearly enough steel to go around. The scarcity can best be illustrated by showing how things are going in the matter of steel plates. In a recent issue the "Saturday Evening Post" stated that the total output of steel plates would be 1,800,000 tons in 1918 and that the Government would need 1,600,000. These figures are not correct, and they err on the side of optimism. The figures conceded by Government officials at Washington show that the total production cannot exceed 1,650,000 and that the Government will need 1,800,000 tons!

It will readily be seen that the Government is finding it necessary to watch steel production and to absolutely control it. About a month ago a peremptory order was issued to the United States Steel Corporation not to give another pound of steel to the automobile manufacturers for use in making pleasure and business cars. No one had been consulted, and when the word got out there was consternation and indignation. It meant that the automobile industry and all the allied industries, except for the manufacture of war trucks and cars, would stop. The effect of such a stoppage can be imagined.

After proper representations had been made to those higher up, the order was rescinded, and a committee of three to represent the manufacturers was invited to go to Washington to consult with the Government and find some means of equitable adjustment. It is interesting to note how the three were selected. One was chosen by the association of automobile manufacturers, one by the accessory people, and one by Henry Ford! The Ford concern does not belong to the association.

This committee came to Washington and had a long series of conferences with the authorities. An agreement was reached, which apparently meets the views of both sides to some extent at least. The terms are being very carefully guarded.

Contrast what occurred in this instance—the dissension, worry and trouble caused by the Government acting first without consulting the industry concerned—with the cases where the two act in harmony! The necessity for co-operation is then very apparent.

EDITOR'S NOTE.—*The next article will deal with the steps which are now being taken to strengthen the organization of advisory committees and put them on a better basis still.*

Toronto, Ont.—Dominion Battery Co., Ltd., has been incorporated with a capital of $20,000 to manufacture dry batteries, etc.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

PRICE movements in lead products have been of more than passing interest during the week as further reductions have been made effective in lead pipe, lead waste pipe and traps and bends. There have been readjustments downward in the price of certain grades of solder owing to the proportion of lead contained therein. In one grade of solder with a higher percentage of tin there has been a slight advance. Tin is still a scarce commodity and prices have shown a steadily upward tendency during the week. The United States markets are practically bare of this commodity and stocks in Canada are light. However, shipments for Canadian dealers are being released by the British Government with fairly frequent regularity. Among the lines to show increases during the week were skates, axle, pulleys, sweat pads, cotton belting, blasting fuse, dash churns. A decline has been recorded in the price of blasting powder. In one quarter there was a disposition to quote lower prices on both black and galvanized sheets. There is considerable competition for business in sheets at present and dealers have been content to take a smaller margin of profit due to the fact that fairly heavy stocks are held in some quarters, especially in the lighter gauges. There has been an active demand for cutlery for the Christmas trade, but wholesalers have been unable to supply anything near requirements owing to the shortage in these lines. Winter lines such as skates, hockey sticks, sleighs have been moving freely. Business is reported good by wholesalers.

MONTREAL MARKETS

MONTREAL, Dec. 5.—General satisfaction is expressed, with the condition of trade in this district. City trade is fairly quiet, but the repeat orders coming in from the country dealers make up for any deficiency locally. Many say that there is better business than there was a year ago at this time. General lines are in fair demand, while, of course, the nearness of Christmas has stimulated a good trade for the special holiday lines. Skates and sleighs, bells and cutlery, and such other lines as will be popular for the next two or three weeks are in fairly good demand still. Window glass has been advanced this week. Pure putty has also been advanced 25 cents per 100 lbs. There is a tendency to higher levels for auger bits, but prices are not yet announced. The rope manufacturers state that there is a firming tendency to seine twines, equal to about ten per cent. This is based on a 5% advance in the American mills. Some lines of tin plate are off the market altogether. Ingot tin is very firm, and is quoted around 79 cents. Lead products are somewhat weaker. The outlook for supplies of raw rope materials is very unsatisfactory. There is a firm tendency in smooth steel wire, one dealer quoting at $6.55 base per 100 lbs.

Booking Barb Wire, and Woven Wire Fencing

Montreal.

VARIOUS LINES. — Some difficulty still exists in securing stock of special lines. Labor and transportation troubles have their effect, while materials being scarce will make it very hard to keep certain commodities in stock. There are few changes to report, but one maker has just announced his prices on woven wire fencing for 1918. Barb wire is now being booked by some, but in rather small quantities owing to the high prices being asked. Galvanized barb wire is selling at $6 per 100 lbs., and this covers 4 x 6, 4 x 4 and 2 x 5 lines.

Cut And Wire Nails Firm, But Unchanged

Montreal.

CUT AND WIRE NAILS.—The situation with regard to nails remains as reported for last week, with orders coming to hand as well as could be anticipated. For spring shipments, there are some orders to hand, and altogether there seems to be more promise for the spring of 1918 than there was a year ago for the season of 1917. Conditions are quite encouraging, and the feeling of merchants in the country is being reflected in the better orders they are giving. Cut nails are quoted at $5.75 base and wire nails at $5.50 base. Smooth steel wire is selling at $6.50 to $6.55 base per 100 lbs.

Iron Pipe Selling In Standard Sizes

Montreal.

IRON PIPE.—For the regular sizes of iron pipe there is a very fair demand, considering that the season is so late. Galvanized pipe is increasingly hard to get and will probably continue so. It would seem that business in the trade continues to be normal, while the demand for sizes coming in from week to week is steady though of small volume.

Country Orders Good For Iron And Steel

Montreal.

IRON AND STEEL.—While the orders being received for iron and steel are small there is a good active demand from the country for this season of the year. Dealers are satisfied when orders are limited, for they are assured that the retail trade is then buying with due care, and can expect to receive repeat business frequently. This is the condition at present, and while there are no changes for the week, prices hold firmly.

MONTREAL—

Black Diamond cast steel, lb.	0 19-0 19

Galvanized And Black Sheets In Small Demand

Montreal.

SHEETS AND PLATES. — Trading in sheets is confined to a small compass here and prices obtaining are firm, but unchanged. If anything, the situation with regard to supplies in the United States is less promising than ever, and war orders will continue to absorb the bulk of supplies. It may be stated, as pointed out in HARDWARE AND METAL two weeks ago, there is a probability of securing some stock soon. We would, however, still urge the conservation of stocks upon the part of tinsmiths and plumbers throughout the country.

Stove Business Slow; Material Outlook Fair

Montreal.

STOVES AND RANGES.—Stove and range makers are settling down to stock-taking now, and the demand for various lines is quite small. The outlook for materials for making up products for 1918 is reported as better, although no definite particulars are available. In any case, one large manufacturer feels more optimistic regarding deliveries of his basic materials than he has been able to feel for some weeks. Coal oil heaters still move, but the demand for these lines is decreasing as the season advances.

Sales Coal Oil Normal; Gasoline Demand is Less

Montreal.

GASOLINE AND COAL OIL.—There has been little change in the local state of trade for either coal oil or gasoline. The southern markets seem to have been unsettled, but there is no effect reported here. Prices remain firm and unchanged, with Palacine selling at 20c, Electroline 20c, and Royalite 17c. Gasoline sales are fair at 32½c per gallon.

Raw Rope Supplies Will Be Very Scarce

Montreal.

ROPE AND CORDAGE. — In some sizes local stocks are good while others are not so plentiful. Those now being supplied will appreciate this fact in view of immediate and future difficulties as to securing raw materials. Present business is reported as quite limited, while the outlook for spring promises well, with many good orders for spring shipment coming along. Many large mills having been commandeered by the United States Government, the future must be viewed with some degree of uncertainty as to deliveries. Prices are firm and unchanged as quoted in current markets.

Lead Pipe, Traps And Sheets Quoted Lower

Montreal.

LEAD PRODUCTS.—Some weakness is shown in the various manufactured lines of lead. Lead pipe and lead waste pipe is one cent per lb. lower. The 10 per cent. advance on list as affecting lead traps and bends has been removed, and these are selling at net list. Lead sheets are weaker also and are reduced from one to one and three-quarter cents per lb. Demand is very light for all lead products.

MONTREAL—

Lead sheets, 3½ lbs. sq. ft.	0.11½- 0.12
Lead sheets, 4 to 6 lbs. sq. ft.	0.13

Light Trading In Old Material Market

Montreal.

OLD MATERIALS. — Junk dealers have little encouragement to unload their accumulated supplies of old materials, and the market is very dull and uninteresting. They have had some promises for quantities of various lines of old metals, but to date there have been no sales of consequence. It will be some time before there is any chance of better prices being offered to those wishing to sell small lots. Until there has been some unloading by the junk dealers themselves, quotations will probably remain unchanged.

Ingot Tin Is Firmer; Lead Is Very Slow

Montreal.

INGOT METALS.—Some progress is being made in securing regulation and control of tin upon the part of the United States Government, and when this is accomplished there will be less uneasiness than at present. Little trading is being effected in this market, and trade in some lines is very nearly at a standstill.

COPPER.—Spot stocks are reported very light. The regulations are so stringent that but small trading can be done in any case as the names of ultimate consumers must be furnished before imports can be made. Quotations are 33c to 34c per lb.

LEAD. — The demand for lead has come almost to a standstill and the price remains unchanged at 9 to 9½c per lb.

TIN.—Ingot tin is quoted at 79 to 79½ cents this week, which shews an advance of 3 to 4 cents per lb. There is no great amount of trading and stocks are limited.

SPELTER.—This remains unchanged with a limited trading being done on the basis of 10½c to 11c per lb.

ANTIMONY.—No change with small request. Prices are quoted from 16 to 18c per lb. There is a tendency to firmness.

ALUMINUM. — Little trading. The price is steady and announcement of the United States Government as to price is soon expected. 58c to 60c is being asked here.

TORONTO MARKETS

TORONTO, Dec. 6.—A number of changes have been recorded in bicycle accessory lines during the past week, due to the fact that accessory dealers are now arranging the prices for their spring catalogue. Some of the lines to show increases include lubricating oil, hand pumps, inflaters, sprocket locks, carriers, street stands, foot pumps. Other lines in which advances have been recorded include torches, screwdrivers, sealing wax, sad iron handles, polishing mitts, shoe knives, safety fuse. One of the lines to record a decline was blasting powder. The reason for the decline in this material is attributed to the greater abundance of certain raw materials. Business has been seasonably good with a demand for Christmas and winter lines evident.

Skates Go Higher By 15 Per Cent.

Toronto.

SKATES.—An advance of 15 per cent. has been made effective in the price of Starr skates through the change of the discount to 20 per cent. off list. The former discount was 30 per cent. off list. Following are the list prices on some of the various lines: Velox hockey skate, $6.50 per pair; Regal, $6; MicMac, $5; tube hockey, aluminized finish, $6; tube hockey, nickel-plated on copper, $6.50; tube racer, aluminized tops, $8; tube racer, nickel-plated on copper, $8.50; No. 150 hockey, $1.45; Climax, without puck stopper, unplated, $2 and nickel-plated $2.50; Climax, with puck stopper, $2.50; Glacier, $3.50; Rex, $4.50; Acadia, $1.60; Acme Club, solid steel, unplated, $1.30, and nickel-plated, $1.70. Above prices are subject to a discount of 20 per cent.

Axle Pulleys and Sweat Pads Go Up

Toronto.

PULLEYS, SWEAT PADS.—An advance of 10% has been made effective on steel axle pulleys, No. 22 now being quoted at 55c per dozen, the former price being 50c. Sweat pads have also been increased approximately 10 per cent. No. 10 is now quoted at $6.60 per dozen; No. 11 at $6.75 dozen; No. 12 at $6.95 per dozen. Ventiplex No. 310 is quoted at $6.35 per dozen.

Cotton Belting Goes to Higher Levels

Toronto.

BELTING.—Higher prices have been made effective on Maple Leaf cotton duck belting through the changing of the discount to 25 and 5 per cent. off list. The former discount was 25 and 10 per cent. off list. This advance follows as a result of the very firm situation in all cotton duck materials in which an advance of approximately 15 per cent. was recorded during the week. The strong situation in duck has in turn been induc-

ed through the high price for raw cotton which on Tuesday of the present week was quoted at 29.85c per pound in the New York market. On Friday of last week the price of spot cotton had reached 31.2c per pound, which constituted a new high record. Some of the manufacturers of cotton twine have withdrawn their prices for the present and are not quoting at all. At the time of writing they had been out of the market for a week.

Dash Churns Advance About 12½ Per Cent.

Toronto.

CHURNS, FANS.—An increase of approximately 12½ per cent. has been made effective on dash churns which now makes the following prices on the various numbers: No. 1, $1.50 each; No. 2, $1.70 each; No. 3, $1.90 each. Power-churns and hand churns remain unchanged at a discount of 25 per cent. off list. Polar Cub electric fan prices are now announced for booking orders for next season's goods. These fans are quoted at $5.35 each net, but in lots of twelve or more concessions will be made. This price on fans is the same as that prevailing for some time past.

Nails and Wire Hold in Firm Market

Toronto.

NAILS, WIRE.—Conditions in the wire nail market held unchanged during the week at firm prices. Demand for nails is not heavy at present, but there is no possibility of manufacturers securing wire rods at prices that will permit of lower prices for some time to come. Quotations were made on the basis of $5.45 per hundred pounds. Cut nails are still quoted at $5.80 per hundred pounds base. Wire products are also in a firm position with prices unchanged at base price of $6.50 per hundred pounds for smooth steel wire.

Gasoline and Coal Oil Hold Steady

Toronto.

GASOLINE, COAL OIL.—Lubricating oils, fuel oil, coal oil and gasoline were in steady market during the week. There is a moderately good demand for gasoline even in the face of winter conditions, while the demand for coal oil continues good. Fuel oil in barrels is quoted at 12½c per gallon and in tank cars at 11c per gallon. Gasoline was quoted at 31½c per gallon and benzine at 30½c per gallon.

Seems Small Chance of Regulation of Fibre

Toronto.

CORDAGE, TWINE.—As time slips away there seems less chance of the United States Government intervening to attempt the fixing of prices on sisal fibre. While it was intimated at one time that there was possibility of regulation this idea has apparently been lost sight of in view of the fact that sisal is a foreign product and is practically all grown in Mexico. The prospect that the United States would not intervene has been favorable to buying but the movement has been slow. In the local market there has been free booking of binder twine for delivery next year at prices to be named later. There is very little trade in cordage lines at present as it is the off-season for demand. Booking for future delivery is very limited. With the coming of spring the shipbuilding concerns are likely to be in the market for heavier purchases. Small twine trade is easing off now that the needs for the Christmas trade have been well taken care of. Prices on rope hold unchanged at those given in current quotations.

Brisk Demand Again On For Coal Heaters

Toronto.

STOVES, ENAMELWARE.—With recent days of wintry weather there has been a brisk demand for coal heaters, a demand that is in excess of the supply. With the first breath of wintry conditions some three or four weeks ago this demand started heavy. Then a stretch of reasonably good weather caused the demand to lag somewhat, but the cold weather of the past week has renewed interest in this line of stoves. Coal-oil heaters are still in active demand as the people are endeavoring to stretch out the time when they will not have to start their coal fires. Enamelware is in brisk demand from the country districts, but the city trade is reported somewhat quiet. Prices on these various lines held steady and unchanged during the week.

—Evans in Baltimore *American*.
"I bane got a yob."

Coke Shortage Is Hampering Steel Output

Toronto.

IRON AND STEEL.—There is continued difficulty for the iron and steel mills to get sufficient supplies of coke to take care of their needs. In the United States mills which have their own iron plants in some instances have been compelled to bank their fires and seek their supplies of iron in the open market. There is practically no supplies of bar iron coming into Canada from the United States at the present time, which accordingly places spot stocks in a strong position. The big desideratum with the mills in the United States at the present time is to see that the Government gets all that is required. With Canadian mills deliveries of iron and steel have been fairly good.

Competition Sends Sheets Still Lower

Toronto.

SHEETS, PLATES.—Owing to the desire for business and to the fact that there are fairly good supplies of the lighter gauges of black sheets in the local market there was a movement toward lower levels in one quarter during the week, the reduction amounting to 50c per hundred pounds. In the instance quoted the following prices now prevail on black sheets: No. 12, $7.55; No. 14, $7.45; No. 16, $7.50; Nos. 18-20, $7.30; Nos. 22-24, $7.35; No. 26, $7.40; No. 28, $7.50; No. 29, $7.60. Lower prices have also been made effective in Apollo brand galvanized sheets as follows: 10¾-oz., $9.80; No. 28 gauge, $9.50; No. 26 gauge, $9.20; Nos. 22 and 24, $9.05; Nos. 18 and 20, $8.90; No. 16, $8.75; No. 14, $8.65. Shipments of lighter gauges of black sheets have been fairly good from the United States producers.

Corrugated Sheets Hold at Readjustment

Toronto.

CORRUGATED SHEETS.—The market for corrugated sheets held steady at the readjustment noted last week. Two weeks ago there was recorded an advance in all gauges of corrugated sheets but last week a readjustment was made and

Nos. 28 and 26 gauge were restored to the former price of $8.70 for No. 28 and $9.60 for No. 26. No. 24 gauge is quoted at $15, No. 22 gauge at $18; No. 20 at $21 and No. 18 gauge at $27 per square. Above prices are subject to a trade discount of 7½ per cent.

Carload of Tubes Came in During Week

Toronto.

BOILER TUBES.—A carload of boiler tubes came into the local market during the week but these are subject to the regulation of the Dominion Government that all tubes sold must be under special permit for each sale. These tubes left the United States mills after the embargo had been placed. Consequently these tubes are not available for domestic use, but can only be sold to quarters where it is furthering the war efforts of the country. Stocks of boiler tubes that were in the country before the embargo and accordingly available for the domestic trade are in very low compass. One concern stated they have not over one hundred tubes in stock. Prices held unchanged during the week.

Lead Pipe, Traps and Bends Decline: Solder Up

Toronto.

LEAD AND ZINC PRODUCTS.—A decline of 1c per pound was recorded in the price of lead pipe and lead waste pipe, making the selling price of the former 14c per pound and the latter 15c per pound. Lead traps and bends have declined approximately 10 per cent. and are now quoted at net list, the former price being 10 per cent. on list. Guaranteed solder is higher in price by ½c per pound due to the percentage of tin used in the manufacture, making the price now 41c per pound. Strictly has been reduced ¾c per pound, to 38¾c and commercial solder 1¾c per pound, making the price now 35¼c. Reductions in solder were due to the higher percentage of lead in the compound.

Tea Lead and Heavy Lead Pipe Up ½c

Toronto.

OLD MATERIALS.—An advance of ½c per pound was recorded in the price being paid by wholesalers for tea lead, making the quotation now 4½c per pound. Heavy lead pipe advanced a similar amount and is now quoted at 6c per pound. Automobile tires on the other hand were down ¼c, quotations being made at 4¼c per pound. Prices on other old materials held unchanged. Mills are buying in very light quantities, seeking only what they need for their immediate requirements.

Tin Moves To Still Higher Price Levels

Toronto.

INGOT METALS.—Tin continued to move upward in price in the local market. There is a good demand for this commodity with stocks in the local market rather light. Other ingot metals for the most part were in fairly quiet demand with prices holding steady on the whole.

COPPER.—Demand for copper in the local market is somewhat dull. In one quarter casting copper was quoted down as low as 30c., with the range up to 32c. From all accounts production of copper is increasing steadily and there is no fear of shortage. It is expected there will be enough copper for all, although the United States Government requirements naturally take precedence. Considerable business has been done for the first quarter of the new year at the established price of 23½c.

TIN. — There was a continued strong situation in tin during the week and prices in the local market showed an upward tendency, the range now being from 75c to 80c per pound as compared with a range of 72c to 78c last week. In the New York market there is practically no market as there is no tin for sale. Negotiations are now under way between the United States and British Governments for the purpose of trying to secure a freer allotment of tin for the United States market. Canadian importers are getting allotments from Great Britain with fairly good regularity.

SPELTER.—While it is generally expected that the price of spelter will be fixed by the United States authorities in the near future as yet nothing definite has transpired. There was an easier feeling in the primary market, but in the local market there was an inclination to ask slightly higher prices, the range being from 10c to 10½c per pound.

LEAD. — There was a quiet market locally for lead with very little demand. In some quarters a concession of ¼c was given over the quotations of last week, making the prices from 8¾c to 9c per pound. In the primary market there has been a better demand for lead for export.

ANTIMONY.—There is a firmer tone in the primary market due to the fear of restricted import licenses. Locally the demand was light and prices held unchanged at 16c to 18c per pound.

ALUMINUM.—Demand for aluminum other than for war purposes is not heavy owing to the restrictions placed on its use by the Government. Prices were steady at 60c per pound.

PIG IRON.—The coke situation continues to be a disturbing factor in the pig iron market. There is scarcity of this material and the output of pig iron in both the United States and Canada is being restricted by reason thereof. Quotations held unchanged in the local market at $50.

New Discount On Torches Increases Price

Toronto.

TORCHES, SCREWDRIVERS.—By a change in the discount on the Clayton & Lambert torches an increase in the price is provided for. Where formerly the discount was 12½ per cent. it is now 5 per cent. off list. Blue line screwdrivers have made an advance of approximately 10 per cent. No. 670 by 4 inch being quoted at $3.50 per dozen and No. 670 by 6 inch at $4.50 per dozen net.

Sealing Wax And Sad Iron Handles Up

Toronto.

SEALING WAX, SAD IRON HANDLES.—A big advance in the price of Parawax has been put into effect. One concern that formerly sold this commodity at 10c per pound has advanced the price to 15c per pound. Other dealers, however, have made intermediate advances, conditioned on the changes made by the manufacturers. Handles for Mrs. Potts' sad irons have been advanced 10c per dozen in certain quarters, which now makes the selling price $1.30 per dozen.

Polishing Mitts And Shoe Knives Go Higher

Toronto.

MITTS, KNIVES.—An advance of 10c per dozen pairs has been made effective in Mystic polishing mitts, which now makes the selling price to the retail trade $1.35 per dozen. Another line to show a considerable advance over recent quotations was in Clyde shoe knives. This line is now quoted at $1.75 per dozen. It has been out of the local market for some little time, but previous quotations were made on the

basis of $1 per dozen. This is indicative of the advances that have been recorded in some lines of steel goods within recent months.

Lubricating Oil Shows 32c Advance

Toronto.

OIL.—Three-in-one oil in the small size has been moved to considerably higher levels. On the 1-oz. size cans list prices have been increased from $1.66 per dozen, making the selling price now $2.30 per dozen. This price is subject to a discount of 50 per cent., which makes the net increase in this size container 32c per dozen. Other sizes hold unchanged at the following prices: 3-oz., $3.66 per dozen list; Special size. $4.08 per dozen list; Factory size, $8.04 per dozen list. Prices on larger sizes are also subject to a discount of 50 per cent.

Bicycle Pumps Are Quoted At Higher Prices

Toronto.

PUMPS.—Higher prices have been made effective on a number of lines of bicycle pumps as a result of the revision of prices now being made in bicycle accessories. List price on standard size hand pumps has been advanced 50c per dozen, making the new price $5 per dozen. Brass bicycle pumps have also been advanced 50c on list, which now makes the selling price $10.50 per dozen list. There is no change in the frame pumps, 10 in. by ⅞-in. being quoted at $11.50 per dozen and 12 in. by ⅞ in. at $12.80 per dozen. Above prices are all subject to a discount of 50 per cent. to the retail trade.

Sprocket Locks And Foot Pumps Higher

Toronto.

LOCKS, FOOT PUMPS. — Eagle sprocket locks have been advanced 60c per dozen on list prices, which now makes the quotation $4.20 per dozen. Two-cylinder foot pumps have been advanced 50c each on list price, making the quotation now $4.50 each list price. Both of the above lines are subject to a discount of 50 per cent. There was a big demand reported for bicycle accessories during the past season as a result of the increased use of bicycles and dealers are looking forward to a better season than in 1917.

Basket Carriers For Bicycles Show Increase

Toronto.

CARRIERS.—A considerable advance has been made on the list price of tradesmen's carriers for use on bicycles, now being quoted at $3.50 list each, an advance of 90c. Androck bicycle basket, size 18 x 13 x 16 in., has been advanced to $2 list, an increase of 40c. Combination carrier and stand has been advanced 20c each on list price, making the selling price now $1.70 each list. Above prices on carriers are all subject to a discount of 50 per cent.

Street Stands And Floor Stands Higher

Toronto.

STANDS.—One of the lines of bicycle accessories to undergo a change during the week has been that of Myer's street and floor stands. The street stand list price has been advanced 80c, which now makes the list selling price $8 each. The floor stands on the other hand have been advanced 30c each on list price, the list selling price now being at $2 each. List prices on street and floor stands are subject to a discount of 50 per cent. to the retail trade.

List Prices On Inflaters Increased

Toronto.

INFLATERS.—List selling prices on celluloid tire inflaters show considerable advances during the week. New prices are for spring 1918 selling. For size 15 by ⅝ in. the new selling list price is $14.40 per dozen, an advance of 80c per dozen. On the 15 by ⅞ in. size the new list selling price is $16.40 per dozen, which is an increase of 40c. Above prices are subject to a discount of 50 per cent.

LONDON MARKETS

LONDON, Dec. 4.—Price movements have been in the upward direction during the week and include changes in fishing tackle, splitting wedges, canvas belting, skates, sidewalk scrapers. Business in this district has been good during the past week. Merchants are preparing for and expect a good Christmas trade. Merchants are showing a desire to foster this trade through attentive window displays. Collections in this district are good and trade has been quite satisfactory for the holiday trade.

Fishing Tackle Advances 50 Per Cent.

London.

FISHING TACKLE.—An advance of approximately 50 per cent. has been made in the price of fishing tackle, including hooks and lines, reels and other lines. The small boy who buys a 1c line to go fishing in the early spring months will find that his pocket-book is hit about as hard as any. This 1c line will have to sell at 2c in a retail way. Lines that formerly sold at 10c will in all probability have to go to the fisherman at 15c. Reels have also made a big advance.

Splitting Wedges And Canvas Belting Go Up

London.

WEDGES, CANVAS BELTING. — Iron splitting wedges have been moved to higher levels, the price of the common type now being 12c per pound and of Truckee pattern 13c per pound. Canvas belting is one of the lines to register a higher price during the week, induced by the high price of cotton that has prevailed for some time past. This commodity is now quoted at a discount of 33 1/3 per cent. off list.

Skates Are In Firm Position; Advance Likely

London.

SKATES.—The market for skates is one of firmness and intimations are made that higher prices are not improbable in the near future. Quotations are still made in this district on the basis of 30 per cent. off list for Starr skates. Winter lines are moving freely at the present time. Snow shovels are quoted at 12½ per cent. off list and at this quotation are unchanged in price. Hand sleighs are also having a good sale, quotations being made on the basis of 35 per cent. off list. Batteries and flashlights for the Christmas trade are also in good sale. Discount on this line is 33 1/3 per cent. off list.

Ash Sifters And Weatherstrip Moving

London.

SIFTERS, WEATHER STRIP. — There is a fairly good sale of ash sifters and weather strip continues to move freely. Ash sifters with common wood sides are quoted at $2.15 per dozen, Banner at $2.90 each and Rocker No. 1 at $5.25 each. Weather strip is quoted at 5 per cent. off list for wood and felt. Swan hardwood weather strip is quoted at 75c per set. Frost King is quoted at $4.40 per dozen packages. Best Railroad ½-inch is quoted at $1.50 per 100 feet, ⅝-inch at $1.75 per 100 feet and ¾-inch at $2 per 100 feet.

Toe Calks, Cow Chains Unchanged

Toe calks and cow chains are holding steady in price, the former being quoted at a discount of 15 per cent. off list and the latter at a discount of 12½ per cent. off list. Stall fixtures of pressed steel are quoted at $1.25 per dozen.

Sidewalk Scrapers Advance In Price

London.

SCRAPERS. — Higher prices have been made effective in the price of sidewalk scrapers, making the price for the light socket scraper now $4 per dozen and for the heavy socket $5.50 per dozen. With the coming of winter a heavier demand is expected to develop for this line.

Cut Glass in Good Sale

There is a good sale for cut glass, silverware, nickel-plated ware and brass ware. Rogers 1847 flatware is quoted at 45 per cent. off list, which makes the price on No. 12 round handle dessert knives and forks $4.50 per dozen and

No. 12 medium size of same $4.75 per dozen.

Good Sale Of Alarm Clocks Now

London.

CLOCKS.—There is a good sale of alarm clocks at the present time and shipments have been coming forward in fairly good quantities within recent weeks. Prices are holding steady, some of the lines being priced as follows: Big Ben, $2.50 each; Baby Ben, $2.50 each; Sleepmetre, $1.65; Lookout, $1.50; Good Morning, $1.10. Watches are also moving freely in the cheaper lines. Prices are as follows: Pocket Ben, $1.20 each; Triumph, $1.30 each; Eclipse, $1.85 each; Winner, $2.15 each; Radiolite, $1.65 each.

Axes And Lanterns Holding Steady In Price

London.

AXES, LANTERNS.—Axes are holding steady in price with a fair sale reported. Eagle brand are quoted at $13.50 per dozen. Cherokee at $15 per dozen, Boys' No. 1 at $9 per dozen and Hunters' No. 1 at $8 per dozen. Above prices are for handled axes. Following prices apply to heads only: Keystone, $11 dozen; Cherokee, $12.50 dozen; Hand-made, $13 dozen; Black Diamond, $14 dozen. Lanterns, short and long pattern, are quoted at $12 per dozen. Lantern globes one dozen to a case are quoted at $1 per dozen, three dozen to case at 90c per dozen and six dozen to case at 85c per dozen.

Oil Heaters in Good Sale

There is a good sale of oil heaters at the present. No. 520 being quoted at $5.75 each; No. 525 at $5.50; No. 530 at $6.25 each. Above prices are subject to a discount of 25 per cent.

Spades, Shovels And Game Traps Steady

London.

SPADES, SHOVELS, GAME TRAPS.—Prices on spades, shovels and game traps hold unchanged. First's in spades and shovels are quoted at 30 per cent. off list, second's at 20 and 2½ per cent. and third's at 5 per cent. off list. Prices on Victor game traps with chain are as follows: No. 0, $1.75 dozen; No. 1, $2.05 dozen; No. 1½, $3.05 dozen; No. 2, $4.30 per dozen. Oneida jump traps with chain are quoted as follows: No. 0, $2.25 dozen; No. 1 $2.65 dozen; No. 1½, $4 dozen; No. 2, $5.80 dozen.

Rope Prices Unchanged

Rope is holding in a steady market and prices are unchanged at 39c per pound for pure Manila, 33c per pound for British Manila and New Zealand hemp rope, and 27½c per pound for sisal rope.

Linseed Oil And Turpentine Unchanged

London.

LINSEED OIL, TURPENTINE.—Linseed oil quotations held unchanged during the week at $1.48 per gallon for raw oil in 1 to 2 barrel lots and $1.51 for boiled oil in same quantity. In 3 to 5 barrel lots the price quoted is $1.47 for raw and $1.50 for boiled. In 6 to 9 barrel lots the quotation is $1.45 for raw and $1.48 for boiled.

Turpentine Steady

Prices were also unchanged in turpentine but there is a weakness in the market which may work out toward lower prices in the near future. In single barrel lots quotations are still made on the basis of 77c per gallon and in 2 to 4 barrel lots at 76c per gallon. In 5-gallon lots the price is 85c per gallon.

Putty In Firm Market; White Lead In Oil Steady

London.

PUTTY, WHITE LEAD IN OIL.—Although prices on putty were unchanged during the week there are intimations that an advance may be recorded in the price of pure putty in the near future. Standard putty is quoted on the basis of $4.65 per 100 lbs. in 100-lb., 50-lb. and 25-lb. drums while pure putty is quoted at $5.65 per hundred pounds.

White Lead in Oil

Quotations on white lead in oil held unchanged at $16.20 per hundred pounds in ton lots and $16.55 in less than ton lots for pure. Elephant pure is quoted at $16.80 in ton lots and $17.15 in less than ton lots.

Glass Holds At Advance

The market for glass is holding steady at the advance recarded last week, single and double diamond being quoted at 40 and 10 per cent. off list and cut lights at 33 1/3 per cent. off list.

Nails Unchanged

Standard steel wire nails are unchanged at $5.45 per hundred pounds base and $5.75 for cut nails.

WINNIPEG MARKETS

WINNIPEG, Dec. 4.—Business for the past week has again been good on stoves of all kinds brought on by the recent cold spell, and all other seasonable lines are moving freely. Advances for the week include conductor pipe and elbows, oil heaters, masons' lines, Hungarian nails, weather strip, rubber belting and suction hose, with a reduction in eavetrough.

The recent embargo placed on tin plate by both the United States and Canadian Governments prohibiting its use for anything except food containers is expected to seriously affect the tinware manufacturers. Practically all the block tin comes from the Straits Settlements, and is controlled by Great Britain who, owing to shortage of boats, is only able to deliver to the United States about 1,000 tons per month, whereas the usual consumption has been 4,000 to 6,000 tons monthly; or, in other words, what before was one month's supply must now cover six, and should this situation continue tinware stocks will eventually be depleted.

Chisels And Punches Go Higher In Price

Winnipeg.

CHISELS, PUNCHES.—New prices have just come to hand covering Sharpen-Eze goods and show an increase of approximately 10 per cent. over former prices. To-day's market prices are quoted herewith: Sharpen-Eze cold chisels. No. 17-½ in., $2.35 doz.; ⅝ in., $3 40 doz.; ¾ in., $5 doz.; ⅞ in., $7.10 doz.; 1 in., $9.20 doz. Sharpen-Eze cape chisels. No. 18-½ in., $2.35 doz.; ⅝ in., $3.40 doz.; ¾ in., $5 doz.; ⅞ in., $7.10 doz.; 1 in.. $9.20 doz. Sharpen-Eze solid punches. No. 633-½ in., $2.35 doz.; ⅝ in., $3 40 doz.; ¾ in.. $5 doz.; ⅞ in., $7.10 doz.; 1 in., $9.20 doz.

Masons' Lines And Hungarian Nails Up

Winnipeg.

MASONS' LINES, NAILS.—Following the advance in other lines of cotton goods, masons' lines again show a small increase in price, and are quoted to-day as follows: No. 18 x 100 ft., white, $1.30 doz.; No. 18 x 100 ft., yellow, $1.80 doz. New lists just issued by the manufacturers show an increase in Hungarian nails, which are quoted to-day at the following price: ⅜ in., 7-16 in., 4-8 in., 9-16 in., ⅝ in.—all 21c lb.

Booking Weather Strip; Oil Heaters Advance

Winnipeg.

WEATHER STRIP, HEATERS.—Bookings are now being accepted on Comfy Felt or "Anti-frost" weather strip for 1918 shipment. The new price shows an increase of 1c box over old prices, and is quoted to-day at 38c box. Owing to further increased cost of production another advance has been necessary on Perfection oil heaters, which are selling to-day at the following prices: No. 125, $4.15 each; No. 130, $4.70 each; No. 230, $6.20 each.

Substantial Increase In Rubber Belting

Winnipeg.

BELTING.—New prices have just been announced by the rubber companies for 1918 delivery and show substantial increases over this year's prices. Bookings are now being taken on the following basis: Rubber belting "Star" or equal, 6 in. and under. 33 1/3 per cent.; 6 in. and over, 20-10-10 per cent.

Endless Belts—	Rubber	Canvas
100 x 8 x 5 ply	$ 81 40	$ 70 00
120 x 8 x 5 ply	97 70	84 00
150 x 8 x 5 ply	122 10	105 00
160 x 8 x 5 ply	130 25	112 00
120 x 9 x 5 ply	110 00	94 90
150 x 9 x 5 ply	137 50	118 65
150 x 8 x 6 ply	147 75	126 00

Suction hose—"J.C." or "Cable," 2 in., 42c ft.; jacketed, 2 in., 55c ft.

Eavetrough Declines; Conductor Pipe Higher

Winnipeg.

EAVETROUGH, CONDUCTOR PIPE.—Eavetrough and conductor pipe prices have again been revised. The former shows a reduction due to the recent drop in galvanized sheets, and the latter an advance in accordance with the very firm market on tin. To-day's market prices are quoted herewith:

Eavetrough—O.G., 8 in., $6.85 100 ft.; 10 in., $7.60 100 ft.; 12 in., $8.95 100 ft.; 15 in., $12.25 100 ft.; 18 in., $15.65 100 ft.

Conductor pipe—Plain or corrugated, 2 in., $8 100 ft.; 3 in., $9.65 100 ft.; 4 in., $12.75 100 ft.; 5 in., $17.30 100 ft.; 6 in., $21 100 ft.

Conductor pipe elbows—Plain or corrugated, 2 in., $1.90 doz.; 3 in., $2.20 doz.; 4 in., $3.50 doz.; 5 in., $8.80 doz.; 6 in., $10.35 doz.

Iron And Steel Prices Hold Firm

Winnipeg.

IRON AND STEEL.—Prices on all lines of bar iron and steel continue firm, with good demand for sleigh shoe steel. The following are to-day's prices: Bar iron, 3-16, ¼, 5-16 rd., $8.05 base; ⅜ and 7-16, $6.10 base; other sizes, $5.60 base; Swedish iron, $5.25 base; steel sleigh shoe, $5.80 base; spring steel, $6.50; plow steel, common, $6.50 100 lbs.; crucible, $7.50 100 lbs.; angle steel, $5.35 100 lbs.; harrow tooth steel, $5.50 base; tool steel, oct. and square, 18c lb.; spring steel, $6.50; machine steel, $7.50 base; tire steel, $5.60; mild steel, $5.80 base.

Sweat Pads May Go To Higher Levels

Winnipeg.

SWEAT PADS.—There is a fair demand for sweat pads, with prices holding firm. However, another advance is expected in the near future, as raw materials entering their manufacture have shown further advances. Prices quoted to-day are as follows: Fentiplex, $6 doz.; brown and white, 12 in., $6.55 doz., or $72 gross; yellow and red edge, 12 in., $6.95 doz., or $76 gross.

Lines Of Brass And Copper Goods All Firm

Winnipeg.

TORCHES.—Following the embargo by the United States on all goods for export containing 10 per cent. or more of brass or copper without first getting a permit will no doubt cause a shortage in many lines, such as those the Government may consider unnecessary. Blow torches, which are imported almost entirely from the United States, come under the law on brass goods, but as they are a necessity in many lines of trade will no doubt be imported with the usual regularity. Prices to-day remain firm on this line, but indications point to another advance. They are quoted to-day as follows: Clayton & Lambert torches, No. 32, $7.15 each; No. 37, $6.35 each. Fire pots, No. 71, $12.15 each; No. 72, $9.30 each.

Linseed Oil Firm; Turpentine Unchanged

Winnipeg.

LINSEED OIL, TURPENTINE.—No change is recorded on linseed oil, and prices remain firm at former quotations, namely, raw, $1.65 gallon; boiled, $1.68 gallon. Prices on turpentine continue firm, with the usual demand at this season. Prices quoted to-day are: Barrels, 80c gal.; ½-barrels, 83c gal.; 5-gal. lots, 85c gal.; 1-gal. lots, 85c gal., plus the usual extra for containers.

Lead Pipe And Waste Pipe Decline

Winnipeg.

LEAD PRODUCTS.—Lead pipe and lead waste show a large reduction in sympathy with the recent weakness in the lead market, and are quoted to-day at the following prices: Lead pipe, $15.40 100 lbs.; lead waste, $16.40.

PITTSBURG MARKETS

PITTSBURGH, Pa., Dec. 4.—The finished steel market has been more active in the month just closed than in October. There has been a larger volume of specifications against old contracts and somewhat more new buying. The new buying is as a rule limited by the ability of mills to make early deliveries. Some of them can take on no new business at all, while none can take on more than limited tonnages.

Sheets Active

Easily the most active branch of the general finished steel trade has been the sheet market. It is estimated that the independent mills booked about 140,000 tons, in blue annealed, black and galvanized. Of this perhaps one-fourth was Government business, although no specific figures are obtainable. The bookings were about one-half greater than a month's output, deliveries running all the way from prompt to first half 1918. In all cases, so far as can be learned, the Government prices prevailed, on the basis of 4.25c for blue annealed, 5c for black and 6.25c for galvanized. The Government prices, however, do not necessarily apply to exports for peace purposes. Next in point of activity has been wire products. Activity in these lines was due chiefly to the simple circumstance that mills were less sold up, and buyers less well covered, than was the case with most other products, particularly the heavy rolled steel materials.

Market Tone Improved

There has been a further improvement in the general tone of the market. This doubtless arises in large part from the better financial situation and outlook, which is improved although not perfect. Some close observers date the inception of the improvement from the time Secretary McAdoo made his statement, early in November, that the Government's war expenditures would be much less than had been reported, or say about ten billion for the fiscal year. Some of the stiffening, however, is attributable to the further curtailment in iron and steel production that has occurred in the past three weeks, due to shortage of coke and coal, this being almost entirely a reflection of the traffic congestion, particularly in the Pittsburgh district.

Pig Iron Unobtainable

Except for occasional odd lots of foundry iron which furnaces consent to sell to needy and regular customers, no pig iron can be bought in this district. Reports from the east show a fairly large volume of business, and evidently the eastern districts are not suffering from coke shortage as much as the Pittsburgh and valley districts, and the Chicago district. The majority of merchant furnaces have been losing production, having to bank for longer or shorter periods on account of not receiving sufficient coke. One Shenango valley interest, with three stacks, had to bank two of them this morning. The steel works are suffering as much, as to their blast furnaces, as the merchant stacks. The Carnegie Steel Co. has been operating only 48 of its 59 blast furnaces, this being due entirely to traffic congestion, as it makes all its coke itself.

W. P. Snyder & Company, who compute monthly the average price obtained for Bessemer and basic iron at valley furnaces, including all sales of 1,000 tons or over, report November averages at $36.30 for Bessemer and $33 for basic, these being the set prices, and the same averages obtained for October, but while the total tonnage used in the October computations was about 100,000 tons, the November computations included only a very small tonnage.

Government Buying

The Government continues to allot large tonnages of steel, but details are withheld. The placing of shell steel business continues and additional allotments are being made of ship steel. A significant item is that while no public announcement has been forthcoming, the steel trade learns that a fresh canvass has been made of the plate situation, to determine the feasibility of placing orders for freight cars to relieve the railroads. It has been found that on account of the large increases in plate rolling capacity due to new construction, it will be possible to take care of the shipbuilding programme as being speeded up further, and still leave a considerable tonnage of plates for steel car building. It seems to be the intention to place some large orders, first for locomotives and then for cars, on behalf of the domestic roads, the filling of the orders to be speeded up under the Government's priority authority. The Russian situation makes it necessary to defer the filling of orders tentatively placed for Russian account, and this releases some locomotive and car-building capacity.

WEEKLY PAINT DEPARTMENT

Winter Activity in Paint

Sales Are Possible if Sought—Do Not Let Your Customers Put You Off—Take Advantage of Christmas Buying Spirit, Suggest Paint.

It is being emphasized more as the years roll by that the sale of paint does not need to be confined to one particular season of the year. It is true that some lines won't sell in the winter time, such as outside paints of various kinds, but it must be remembered that the sporting goods department does not go out of business in the winter because tennis supplies and baseball goods are not used. There is in your paint department a field which can be made active during the entire year, if aggressive tactics are adopted. Are you studying the possibilities in this department—do you use newspaper space and arrange window displays now or is the paint department entirely neglected?

Bring It To Their Notice Now

There are any number of consumers who have not considered the necessity of painting the interior of their homes during the summer months. They are outside too much—they do not feel that it is necessary to do their interior decorating when they spend their time outside—on the verandah, lawn or at the summer resort—and they are quite right. During the months when they are confined to their homes, that is when they want everything inside spick and span. Do not let them put you off with "wait till after Christmas"—have them do it now. Leaving it till the new year often means that it will be spring before anything is done and at that time the approach of summer forms another excuse for delaying this important item. The average consumer does not realize the value of paint—does your advertising serve to engender in him a feeling of the real need of paint—not from the standpoint of decoration only but of utility?

Knowing the Line Essential

There are many points which the salesmen must watch in selling paint to make sure that the consumer buys the right paint for his particular work. It is necessary to find out then for what the paint is intended—has paint or varnish ever been applied and if so is the surface in good condition or otherwise? It is necessary to find out in connection with the various materials to be painted, what their real condition is—this will vary in wood, iron, cement, plaster, tin or galvanized iron as the time of exposure to the elements or their newness is apparent. There is a large field to be covered in mastering the paint department but to get the best results and increase the sales to their proper all year round basis a careful study is suggested.

The Information is Available

Manufacturers are only too willing to furnish valuable information in connection with their products and it should be the aim of every paint salesman to absorb as much sales knowledge as possible. This can be used wonderfully in creating sales and the questions of the amateur painter as to how to apply can usually be referred to directions which appear on the packages—not that the salesman shouldn't explain, but by the time the user gets home, the instructions, if left to memory, may be somewhat twisted.

Take Advantage of Buying Spirit—Suggest Paint

With the Christmas rush on holiday goods some are inclined to overlook the paint department. This is not as it should be for the public is in a buying mood—they want to spend their money—they are open to suggestion. Are you taking advantage of this in suggesting that the use of paint is a splendid way to attain that bright, attractive appearance so desired during the holiday season? No opportunity should be lost of bringing the various interior finishes before your customers. Keep your paint department active—make a run on it and see what reductions can be accomplished before the end of the year. About three weeks remain before stock-taking in most hardware stores—try reducing your paint stock; when you realize how easily sales can be made you will plan your sales program on an all-year-round basis for 1918.

WASTAGE OF GASOLINE SERIOUS

Says Gasoline Wasted in America is More Than Sufficient to Win the War.

Startling figures are quoted by Alfred Reeves, general manager of the National Automobile Chamber of Commerce, to prove that if we can save two-thirds of all the gasoline now wasted in the United States there will be no shortage of motor fuel and the war needs of our army and navy will be amply provided for. This is the sum and substance of the "don't waste gasoline" campaign which has been organized by the Council of National Defense, the petroleum division of the United States Bureau of Mines, and the automobile manufacturers of the country.

There is a big opportunity for motorists to show not only their patriotism but their good judgment in supporting such a movement. It is the one certain way to insure a sufficient supply of fuel for our part in the war.

According to the estimate of the Bureau of Mines 959,000 gallons of gasoline a day will be required for the use of army, navy, and aeronautical operations during the coming year.

The Bureau of Mines estimates that the following savings can be effected daily:

	Gallons
Tank wagon losses	7,200
Leaky carburetors, average 1-17th of a pint per car	31,400
Poorly adjusted carburetors, ½ pt. per car	240,000
Motors running idle, ¼ pint per car	150,000
Wasted in garages, 10 pints each	67,000
Possible saving by using kerosene in garages	108,000
Needless use of passenger cars, 1¾ pints per car	897,400

This makes a total of about 1,500,000 gallons a day, or 561,000,000 gallons a year, whereas our war needs are 350,000,000 gallons a year—less than two-thirds of what may be considered as wasted at the present time.

Co-operating in this movement are the American Automobile Association, the organization of users; the motor and accessory manufacturers, including the motor and carburetor makers, and the Society of Automotive Engineers. Van H. Manning, chief of the petroleum division of the bureau of mines, is in direct charge of the undertaking.

Thousands of posters are being prepared to be hung in every automobile salesroom, garage, and gasoline supply station and hardware store in the country. These posters will show graphically the quantity of gasoline produced daily, the quantities used in motor trucks and motor cars, and the quantities that can be saved in various ways.

Toronto.—The Cluff Ammunition Co has taken out a permit to build a steel store house at 27 Atlantic Avenue, to cost $20 000.

Strathroy, Ont.—The Andrews Wire Wire Works of Canada, Ltd., has secured a building at Strathroy, Ont., which it will remodel and equip for the manufacture of wire products, etc. G. M Haldane is local manager.

Paint Sales this Winter will help Paint Sales next Spring

Every tin of **Jamieson's Pure Prepared Paints** you sell this Winter for interior decoration will work to increase your sales of **"Jamieson's"** next Spring. The householder who buys **"Jamieson's"** now is certain to demand **"Jamieson's"** when he wants to do his outside work. The complete satisfaction he receives at this time will induce him to always specify **"Jamieson's,"** so that he may be sure of good results.

Boosting **"Jamieson's"** throughout the Winter is good for future business as well as for present.

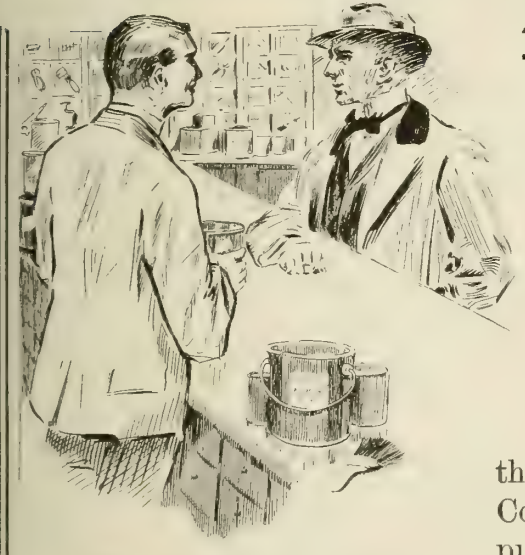
ESTABLISHED 1858 **Owning and operating P. D. Dods & Co., Limited**

"There's this advantage in painting in the Fall"



Moore's House Colors Give Good Results In any Season.

"The cooler weather means slower drying, and slower drying means a more durable finish."

Here's a strong and reasonable argument with which to combat the prevalent idea that Spring is the only time to get good results from Moore's House Colors. Then, too, the absence of flies and dust is a factor that makes for a more satisfactory job. Moore's House Colors are made from the very best and most lasting pigments combined with Pure Linseed Oil, and the best liquid dryers. Dries hard, but retains sufficient elasticity to prevent cracking and peeling.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Dec. 5.—Firming tendencies on turpentine, linseed oil and pure putty, with a revised discount on window glass, are this week's features. There is a declining demand for most lines for immediate shipment, but even at this some dealers are better pleased than ever with the volume of business coming their way for this season of the year. As spring bookings are even better than they have been in the past season or two, much satisfaction is expressed, and this reflects a good condition in the country. Some express uneasiness regarding future deliveries of turpentine, and state that they will not be at all surprised if there is a shortage against spring requirements. Glass discounts have been lowered; the regular discount is now 10 per cent. and the retail discount 15 per cent.

Linseed Oil Still Firm; Slightly Higher Prices

Montreal.

LINSEED OIL.—There is no relief in sight as to the delivery of flaxseed, and oil is held firmly, with a higher tendency. The tone of flaxseed is firmer, with an advance in several of the primary markets. Quotations show a slight advance of about 1c per gallon over prices of last week. Business is limited, while there is some activity in the matter of orders placed for spring delivery.

Linseed Oil—	Raw, Imp. gal.	Boiled, Imp. gal.
1 to 4 barrels	$1.39-$1.43	$1.41½-01.46
5 to 9 barrels	1.38- 1.42	1.40½1 1.45
10 to 25 barrels	1.37- 1.41	1.39½- 1.44

Turpentine Outlook Is Rather Unsatisfactory

Montreal.

TURPENTINE.—The primary situation in turpentine gave evidence of weakness during the week. The outlook is not very clear, and some dealers are firmly of the opinion that there will be a shortage of supplies for spring. The outlook for future deliveries is uncertain. The immediate situation is unchanged. Stocks on hand are reported as just fair, and business in this line is quiet.

Turpentine—	Per Imp. gallon
5 bbls. and over	$0.72-$0.75

Window Glass Is Up; Discounts Are Changed

Montreal.

GLASS.—An advance is recorded in glass through a revision of discounts. These now are—to the ordinary trade 10 per cent., and to the retailers 15 per cent. off list.

There is not much immediate business, as most of the fall work is finished, but some bookings are being taken for delivery after the first of the new year.

White Lead In Oil Holds Steady In Price

Montreal.

WHITE LEAD IN OIL.—Little interest centres around white lead in oil. The market tendency is rather firm, even though lead has been some weaker in tone, as the price of linseed oil has tended to equalize matters. Jobbers here do not expect much change of price owing to the small demand that now exists, and this will continue to be the feature in the cold months. Some booking is being done on the basis of $15.50 per cwt. for 5-ton lots, $16 for 1-ton lots, and $16.35 per 100 lbs. for smaller quantities.

Paint Sorting Is Quiet; Spring Bookings Good

Montreal.

MIXED PAINT.—Most paint makers are either taking stock or making preparations for inventory. It is a quiet time for immediate business, although there is a fair amount being done. One large paint maker states that his firm is well pleased with the outlook for spring, and that orders received indicate a splendid feeling among retailers, who are now placing spring business in greater volume than had been looked for when the travellers went out to cover their territory.

Pure Putty Advances; Ordinary Grades Firm

Montreal.

PUTTY.—An advance has been made on pure putty. The regular advance of $1 per 100 lbs. over ordinary grades has been raised to $1.25 this week. Ordinary putty is very firm, but unchanged, and the demand is just fair. There is anticipation in some quarters that the price may advance owing to scarcity and increased costs of containers. Linseed oil and whiting being higher, there will also be a tendency to higher prices for putty. Quotations are—Bulk, in casks, $3.60 per 100 lbs.; bulk, in drums of 25, 50, or 100 lbs., $4.45, and bladders in bbls., $4.70 per 100 lbs.

TORONTO

TORONTO, Dec. 6.—Turpentine was in easier tone in the local market during the week as a result of a similar condition in the primary market. Quotations were made at lower prices than those prevailing last week, but there are intimations that the primary market has again an upward turn. Linseed oil held in stationary position with a firmer tone in the flaxseed market during the week. Varnish shellac was moved to higher levels, following a recent advance in gum shellac. Glass and white lead in oil remained unchanged. Differential between standard and pure putty has been increased. Business in paint lines is light at present owing to the approach of the holiday season. Travellers for some of the wholesale houses are in off the road and will not make their usual trips again until after the New Year. Paint manufacturers report booking business for spring continues satisfactory.

Linseed Oil Is In Firmer Undertone

Toronto.

LINSEED OIL.—There is a firmer undertone to the market for linseed oil due in large measure to the uncertainty over the Argentine crop. In some well informed circles the opinion is expressed that there is grave doubt whether or not this seed will get into the United States market. As reported last week a cable despatch from the Argentine stated that negotiations were under way on the part of the Allies to take all the exportable surplus of flaxseed from the Argentine. New uses which are being found for linseed oil has caused a big demand from quarters that hitherto used very little. Reports of frost in Argentine also have had the effect of reducing the crop estimates. Should the Argentine seed not come into the United States market Canadian seed would be much in demand and prices would undoubtedly go higher. There is a good movement of seed in the Canadian Northwest at the present time, 275 cars having passed inspection at Winnipeg during the week. Supplies of seed are coming to the Canadian crushers in the East very slowly owing to the transportation situation and the movement of seed in the West would seem to indicate that it is going across the line into the United States. Flaxseed showed a firmer tendency at Winnipeg during the week, an advance of 3¾c having been recorded in the December option. In small quantities the demand for linseed oil is

Proof

In order to prove that we are positively maintaining our formula, we asked J. T. Donald & Co. to purchase a can of B-H English Paint on the open market and make an analysis.

Their letter reproduced below shows conclusively that B-H English Paint conforms to the written guarantee signed by our President on every can.

B-H "ENGLISH" PAINT 70% Pure White Lead, 30% Pure White Zinc, 100% Pure Paint

This combination is unexcelled for outside use.

Where we are not represented, we shall be pleased to hear from responsible dealers.

CORNER BEAVER HALL
MONTREAL, November 30.1917.

Messrs Brandram-Henderson, Ltd.,
St. Urbain St.,
Montreal.

Dear Sirs:-

We purchased tins of your Brandram-Henderson " English " White Paint in different parts of the city and mixed the same into one sample. We then submitted this composite sample to analysis. We find:-

I. The dry pigment gave on analysis:-

II. Vehicle 30.90%
pigment 69.10%

III. White Lead 68.12%
Zinc Oxide 30.90%

IV. The Vehicle is found to consist of:-
Linseed Oil, Turpentine and Liquid Dryer.

The conclusions to be drawn from the above are that this Brandram-Henderson "English " White Paint is of the highest grade and combines in one the advantages of the two basic white pigments, white lead and zinc oxide.

Yours faithfully,
J. T. Donald & Co.,

somewhat quiet. Range of quotations is as follows:

	Raw, Imp. Gal.	Boiled, Imp. Gal.
1 to 2 bbls.	$1.39-$1.52	$1.41½-$1.55
3 to 5 bbls.	1.39- 1.51	1.41½- 1.54
6 to 9 bbls.	1.38- 1.50	1.40½- 1.53

Turpentine Gives Evidence Of Weakness

Toronto.

TURPENTINE.—There was a weaker tone to the turpentine market during the week as a result of a decline in the primary market to the extent of 3c per gallon. In the local market the range of quotations remained unchanged, although in one instance quotations were reduced from 75½c and were made on the basis of 74c. The range of prices held unchanged at 74c to 77c, but intimations were made that concessions would probably be made from the higher figures. The weakness in the primary market was caused through a poor domestic demand and inability to secure freight accommodations for Europe. There are now some 140,000 barrels of turpentine held at the various Southern ports. Locally the demand is light.

	Imp. gal.
1 barrel	$0.74-$0.77
2 to 4 barrels	0.73- 0.76
5 gallon lots	0.81- 0.84

Varnish Shellac Advances 35c Gallon

Toronto.

SHELLAC.—Following an advance in the price of gum shellac and higher prices in wood alcohol and methylated spirits an advance of 35c per gallon was put into effect on the price of varnish shellac during the week. Pure white in gallon jugs is now quoted at $4.35 per gallon, while pure orange varnish shellac is quoted at $4.10 per gallon. Wood alcohol and methylated spirits, together with gum shellac, are the ingredients used in the varnish shellac. This advance in varnish shellac was stated in these columns to be highly probably. Gum shellac continues to be quoted at 70c to 73c for TN, 83c to 86c for finest white and 80c to 83c for bone dry white. Statements were made that offers of sale were made for bone dry as low as 68c, but no confirmation of sales could be obtained as taking place at this figure.

Thinks Glass Industry Nearing Serious Situation

Toronto.

GLASS.—Glass prices are unchanged at the advance recorded last week, quotations being made on the basis of 40 and 10 per cent. off list on single and double diamond and 33 1-3 per cent. on cut lights. Anent the situation in window glass a large dealer had the following to say on being asked for his opinion by HARDWARE AND METAL:

"The window glass jobbers and importers are facing to-day the most serious situation in the history of the industry. This is no less than the prohibition of the manufacture of window glass by the United States Government. It has been known for some time past that the Government has been compiling a list of non-essentials and it was an open secret that window glass was among the first articles so enumerated. A week ago it was stated in the Pittsburgh trade journals that the majority of the War Board were in favor of classing window glass as a non-essential. The New York *Times* of Saturday, November 24, in a front page leading article stated that the Priority Board had recommended to the Government authorities a list of 525 non-essential commodities which might be subject to embargoes. Among this list of 525 there are eleven important commodities of which window glass is one of the first. The New York *Times* in an editorial on Sunday, November 25, stated that this will come as a shock to many shippers, but some such action must be taken to afford relief to the fuel and railroad situation. In these articles it is pointed out that similar steps were taken long ago in England and France and these drastic proposals are necessary to meet the present crisis.
